LETTER OF THE MONTH

Multiplayer Games Coming Too Soon?

I must express my deep concern about the recent obsession with multiplayer games in your magazine. This obsession has become a lot more apparent, especially now that the next-gen systems are all going to eventually offer networking capabilities. To be honest, I'm not overly fond of the current multiplayer games that are available on the N64. The main reason being, that all of my friends live in

player! With this networking thing looming on the horizon, I'm only getting more wary. What if, eventually, all games are made into online things like EverQuest? Where does that leave guys like me who don't have cable (therefore no cable modem), don't want a satellite dish, and buy more than one of the new systems? I already have Internet access. Why should I sign up for at least two more online services just to play games on the Dreamcast and PS2? Also, didn't Sega try the network thing with the Genesis? I seem to remember it being really bad, and not having much support from the company. If gamers

dorms, or at least in town, and I live in the countryside. They have friends around them all the time. I see my friends about five times per year. See my problem? They play multiplayer games constantly, so they become great at them. I play games by myself, so I can't practice for multiplayer bouts. Therefore I SUCK at multi-

gaming will follow suit. Maybe you'll have to invest in cable or some form of broad bandwidth connection at some point. Maybe you'll choose to go with a wireless option. Who knows? One thing's for sure though... eventually you'll only need one account in order to access the Net. It's a bit of a mess at the moment, but hopefully in a couple of years the infrastructure will be sufficiently developed so you can log on to your account from a PC, a game box, a cell phone, a PDA or a handheld like the Game Boy Advance.

The next few years will be very exciting...and the possibilities for multiplayer gaming and for 'persistent environments' are boundless. Sit tight...it's going to get cheaper and more readily available. Soon you won't have to worry where your buddies are.

Network gaming is going to become more and more important—but it will develop alongside other technologies in the home. We're not going to suddenly get lots of multiplayer games and no single-player experiences. Even if things do move more in that direction, we'll see AI improving sufficiently that you'll be able to practice against Bots when you're not online. Just check out Quake III: Arena on the PC...the Bots on Nightmare level are nearly impossible to beat. If you can crack them, you can beat anyone (just ask our Art Ed, Andrew Burwell).

Connectivity is something that is inevitable...but it's going to take a while before it becomes established as the norm for both playing and distributing games. The Internet is becoming more and more important in people's lives...and as it does so,

Hsu and Chan: Plagiarism?

I'm writing in to say that your new addition to the mag *The Adventures of Hsu and Chan* is not only pretty UNfunny, it's a BLATANT rip-off of Evan Dorkin's masterful *MWK & Cheese* comics. The writing and attitude of Hsu and Chan is an out-and-out swipe of Dorkin's style. I might think it was an OK strip if I had never read *MWK & Cheese* before as I'm sure most of your readers haven't, but in light of Dorkin's work, *Hsu and Chan* seems to be a pretty @!\$ pathetic and plagiarized piece of penciling.

I wouldn't mind at all if you dropped the strip...In fact, I'd appreciate it. I find it pretty insulting the way the guy is flaunting his lack of originality and creativity. You can also tell Mr. Scott that at least one person out there in your readership knows where he gets his "Inspiration"...at the very least, he needs to give a nod to Evan. It's just the ethical thing to do.

Brad Galloway
Comic Artist and Game Player

Who better to reply to such an onslaught than Norm himself? So we turned things over to him:

"Well, I must say I am thoroughly hurt. When you get mail like this, there's only one thing for a right-thinking cartoonist to do: You go upstairs and suck your thumb for a couple hours. Once I'd finished that, I drank for seven days straight, got married and divorced in the same night, bought a house in lower L.A., then had a shower and a shave and boy, do I feel better. While my personal opinion is that some little fellow has a tad too much spare time on his hands, I thought it best to take it to a person of authority on the subject. My mom. Then I tried Evan Dorkin." His reply:

Norm—Consider it a badge of honor. It's a hurdle anyone who sees print is going to have to deal with sooner or later. Unless, of course, a creator is so rotten that's all he or she receives (then they're either the worst thing going or an undiscovered genius

Congratulations. You win an Interact controller. You will be receiving an Alloy Arcade Stick (DC) Barracade (PS), or a SharkPad Pro 64 (N64).

who won't receive any credit until after they die). I got a doozy of a rant re: *Dark II* about two weeks ago, and it was so personal and selfish and un-critical (as for as actual, honest criticism goes) that I took it as a positive sign that passing off this particular reader was a very, very good thing. Unless you actually plagiarized my stuff, let it roll off your back. Of course, if I find out you've infringed on my God-given right to draw doiry products in ink and crack wise with sold doiry products, my legion of lawyers will be on you like hobos into steaks. No one shall mess with my un-intellectual property. Ho ho ho!

"And those are words to live by. Evan's Web site is www.houseof fun.com. It is maintained by his sweetie, Sarah Dyer, who knows more about computers than he does. He does a bundle of comics in addition to the aforementioned *Milk and Cheese*, among them *Kid Blotoff* and an anthology title called *Dork!* (featuring such wonders as the *Murder Family* and *The Eltingville Club*) and Sarah also write for *Space Ghost: Coast to Coast*, which you've surely seen before. Be sure to check out all of their work, if you ever have the opportunity (although note that both *Dork!* and *Milk and Cheese* are recommended for older, if not particularly mature, readers)."

Some Questions

1. I'm dying to play Shenmue. Since its U.S. release date is nearly a year away, will Sega release a demo on these shores anytime soon?

2. I recently visited an IGN storm Web site that claimed Daikatana was coming out in December. If this is true, what's the word on the release date of the Dreamcast version?

enman@worldnet.att.net

1. No word on a Shenmue demo yet...but it seems very likely that we'll see one in the next few months.
2. No word yet. Daikatana has been a troubled game for the past year...so don't expect any accurate announcements concerning its release. 'This year' is probably as good an answer as you'll get.

Where's Conker?

Whatever happened to Conker 64? I checked at videogames.com and it was last updated 1/20/99. I've been waiting for that game, but there seems to be no progress.

mmf123@att.net

The last thing we heard was that Conker may not make it to the N64 at all. Rumor has it that he will be the star of Rare's first Dolphin project instead. We'll let you know soon.

3dfx Apologizes

Some console gamers have negatively responded to recent advertisements in Electronic Gaming Monthly. The ads, which highlight the youth of console gamers, began running in October and were intended to attract the reader's attention—something that is becoming increasingly difficult with fast-paced, game-centric, marketing-savvy readers. For that purpose, the ads were highly successful and most people liked the humor. Unfortunately, a few console gamers took the ads personally which was not an intended outcome from the campaign. These ads were intended as a humorous attempt to educate consumers as they begin to migrate from console gaming to PC gaming, an evolution that multiple sources of industry research show as a leading trend. Gaming is a strong passion for us at 3dfx, as it clearly is for anyone reading this magazine, and

we would never intentionally create a campaign that would question anyone's desire for high-quality gaming. In fact, just the opposite, which is why we feel that the ads were important. Anyone who has a passion to play or even design games can, on the PC. This passion has led important companies such as id Software to create *Wolfenstein 3D*, the first true 3D game, which was initially released as a shareware demonstration. The success of *Wolfenstein* on the PC made possible great games like *Doom*, and the *Quake* series, which were eventually ported to console systems. The same can be said for 3dfx on the hardware side, as we created the first compelling 3D graphics boards for the consumer market. Without the promise of unrivaled innovation on the PC, many of the greatest games and gaming hardware wouldn't exist today.

What we want gamers to know is that the PC offers gamers freedom to create as well as freedom to play the greatest games. Our 3D technology can be upgraded and enhanced every six to nine

months, and is capable of interacting with online games. And, although consoles are innovative when they are introduced, they can never match the rate of improvement made on PCs. For us, that is the ultimate gaming experience.

We would like to take this opportunity to apologize to any console gamers who were offended or hurt by our ads. For those gamers that found 3dfx's ads to be funny and educational, we applaud your sense of humor.

Sincerely,
Michael Hesse
Senior Vice President of Worldwide Marketing, 3dfx Interactive, Inc.

SHORTS

I just watched the new *Rain* movie and really enjoyed it. Through the whole movie I was thinking, "That would be a cool assignment in a new N64 game." Well, a new N64 game based on this would be cool! I heard that they were making an N64 one similar to *GoldenEye*. Is this true?

Che's Little N64 Problem

Che...could you please explain how in the world you could have given the Nintendo 64 a higher score than PlayStation in the 2000 Buyers Guide? I assume that score was created before the delays of *Perfect Dark* and *Starcraft 64*, and the onslaught of recent PlayStation games.

gkdynasi@hotmail.com

The 9.5 score for the N64 in this year's buyer's guide was a typo. Simple as that. If you read my accompanying text which included sentiments like, "...[after three years] there's still only a handful of games I'd care to own," and "I'm waiting for Nintendo to 'get it right' with the Dolphin," you could have deduced that a score of 9.5 must've been an error. My original score for the N64 was a 7.0. - Che

OOPS!

* Last month we accidentally moved the section in *Tricks* where *Re-Volt* and *Winback* fell. As you all know, they are in fact N64 games. Not PlayStation games.

We've all been playing Murder Simulators

By Steven L. Kent
As first seen on MSNBC.com

Stop Teaching Our Children to Kill: A Call to Action Against TV, Movie & Video Game Violence (published by the Crown Publishing Group), a new book describing the dangers of video games by Lieutenant Colonel Dave Grossman, a former Army Ranger who taught classes at West Point, and co-authored by Gloria DeGaetano, is the intellectual equivalent of the computer game Doom. Grossman spends most of the book running around wildly shooting accusations at video games and the companies that make them, never stopping to examine the full ramifications of what he is saying and completely ignoring the facts when they get in his way.

Let me pause to say that I do not entirely disagree with Grossman. Unlike most members of the video game-covering press, I think Sens. Joseph Lieberman (D-Conn.) and Herb Kohl (D-Wis.) were entirely correct when they called for a rating system.

I also think it is foolish and irresponsible for parents to let young children play violent games or watch violent movies. Frankly, this is just common sense.

Equally positive is the work of Dr. David Walsh of the National Institute on Media and the Family, who has spent the last few years monitoring the way the interactive entertainment industry implements the game rating system. I even agree with Daphne White, who as the head of a parent advocacy group called the Lion and Lamb Project, has pointed out that it is ludicrous to use ratings to say that games and movies are for mature audiences, then make kids' action figures based on them.

OFF THE EXTREME END

Grossman, on the other hand, ratchets these efforts to their extreme. This is the guy, for instance, who held a tasteless press event in Littleton, Colo., (shortly after the Columbine High School shooting) in which he traded kids board games for video games.

Politicians generally save this kind of tackiness for when they run for office, but Grossman is not running for public office. He apparently makes his living by consulting education and law enforcement agencies. And, of course, he has just released a book.

Lt. Col. Grossman's book seems to revolve

- Youth crime is rising in America as is the amount of violence in video and computer games.

There is plenty of evidence to suggest that watching violent movies and playing violent games may lead to aggressive behavior.

One of the fundamental studies along these lines was conducted by Len Eron, a professor at the University of Michigan, who followed the media-watching habits of 875 subjects over a 22-year period.

Eron interviewed his subjects every 11 years from 1960 to 1982 and found "a significant relation between the violence of the programs that these kids watched at home and how aggressive they were in school." His results showed that aggressive behavior decreases when people watch less violent television shows and increases when they watch more. According to Eron, there is a causal relationship between television-watching and aggressive behavior. In fact, he says that his study showed that media-watching habits account for 10 percent of aggressive behavior.

DEPARTURE FROM REALITY

Eron is not alone. There have been many studies that have drawn a link between watching violent movies and aggressive behavior. What there has not been, until recently, are studies looking into violent games and aggressive behavior.

This year a few studies have been published drawing a link between games and aggression. This research is fairly new, however.

Grossman's second point, that games are an effective way to teach people to kill, is where he begins to leave reality behind:

"If you don't believe us, you should know that one of the most effective and widely used simulators developed by the United States Army in recent years, MACS (Multipurpose Arcade Combat Simulator), is nothing more than a modified Super Nintendo game (in fact,

around a few basic themes:

- Exposure to violent entertainment desensitizes youth to acts of violence and leads to aggressive behavior.

- Violent video and computer games are an ultra-effective way of instructing murder.

Which company do you guess will do best in the holiday season NEXT year?

it closely resembles the popular game Duck Hunt, except with a plastic M16 firing at typical military targets on a TV screen." (p. 74)

The poster boy for this assertion seems to be Michael Carneal, the 14-year-old Kentucky boy who walked into a Paducah school and opened fire on a prayer circle.

"If you are looking for a direct link between these types of games and increasing rates in violence among children, you need look no further than the events at a Paducah, Ky., school a few years ago. Fourteen-year-old Michael Carneal steals a gun from a neighbor's house, brings it to school, and fires eight shots into a student prayer meeting that is breaking up. Prior to stealing the gun, he had never shot a real handgun in his life. The FBI says that the average experienced law enforcement officer, in the average shootout, at an average range of seven yards, hits with approximately one bullet in five. So how many hits did Michael Carneal make? He fired eight shots; he got eight hits, on eight different kids. Five of them were head shots and the other three were upper torso." (p. 5)

The obvious and overlooked fact here is that Michael Carneal was not in the "average

students praying and shot them all. The sad facts are that he attacked a group of approximately 50 kids packed together tightly. Carneal told psychologists that he aimed "straight across [the] room at [the] wall on [the] other side of [the] crowd and not at individual people."

VIOLENCE RISING?

This leads us to Grossman's last and most errant contention, that youth violence and video game violence are on the rise:

"It's that simple. As the content of television becomes more violent, so do our children. Since 1982, television violence has increased by 750 percent and in that same time period teachers have reported a nearly 800 percent increase of aggressive acts on the playground." (p. 26)

Interestingly, Grossman does not cite where this information comes from in his book, and I do not see how anybody could ever quantify either statistic.

Grossman's book includes two nifty little graphs—one showing the steep rise of violence among female youths and the other among males. Both show huge jumps,

mimic the actual experience of killing." (p. 22)

Read this and you might think that every game on the market is a gory shooter. In fact, of the top 10 games of 1999, all 10 games were rated "E" by the Entertainment Software Rating Board, meaning they are suitable for players of all ages. The games on this list include five Pokémon games, one racing game, two adventure games, and one very cartoony fighting game.

In fact, only 7 percent of the games on the market today have an "M" rating, signifying that they are only suitable for mature players.

THE MILITARY CONNECTION

As a former teacher at West Point and a consultant to law-enforcement agencies across the country, Grossman should be in his element when he discusses the use of simulators by police and the military, but even here his facts seem questionable.

I interviewed the Lt. Colonel earlier this year and we discussed the simulators used by law enforcement agencies and the military. He said that FATS (Fire Arms Training Simulation) and MACS were used to desensitize soldiers and policemen so that they would more readily fire their guns in combat.

When I asked retired Col. Ron Krisak, who ran the training and training technology battle labs at Fort Dix from 1995-1997 about this, he said that these simulations had nothing to do with desensitizing recruits.

"The main idea behind simulations, video games and modeling simulations in the military services is to hone battlefield skills. It has nothing to do with desensitizing soldiers. It trains them on how to be more effective."

Grossman makes a fine point when he states that it does not make sense to expose young children to ultra-violent entertainment. It's sad that he doesn't stop there, because the rest of his arguments detract from his message. www.msnbc.com

"We have gone from the benign Pong video game in the 1970s to games in the 1990s that act more as murder simulators..."

shootout." He did not have to deal with the anxiety of these unarmed kids shooting back at him. They were not seven yards away, prepared for his attack and hiding behind cover; they were unaware of the danger as they emerged from a moment of prayer.

IGNORING FACTS

Grossman has played fast and loose with more than just logic, he's also unaware of or ignoring important facts.

According to a police report filed on Sept. 21, 1998, Carneal received firearms training with rifles at a local 4-H facility. Not only had he had rifle training, he'd actually had previous experience shooting the very weapon he used in his crime. Toby Nace, the son of the neighbor from whom Carneal stole the gun, told police that Carneal fired two full clips from that gun the weekend before the attack.

But most video games teach you to fire at each target only once, hitting as many targets as you can as fast as you can in order to rack up a high score. And many video games give bonus effects...for head shots. It's awful to note that of Michael Carneal's eight shots he had eight hits, all head and upper torso, three dead and one paralyzed. (p. 76)

To read Grossman's text, you might think that Carneal happened upon a group of eight

particularly between 1985 and 1995. In an act of honesty, they also show a drop between 1995 and today. He even addresses the positive drop:

"According to FBI reports, crime is down 7 percent. We are experiencing a slight downturn in murders and aggravated assaults, bringing us back to the crime rates of about 1990. But that is far from the full story. To gain a useful perspective on violent crime—among both youth and adults—the view must cover a long enough time period to clearly identify a trend." (p. 11)

According to a recent report, issued too late for Grossman to reference it in his book, the number of violent crimes is still falling. I do not understand how he can nonchalantly dismiss a five-year drop because it is too short, then continue to speak as if crime is actually on the rise.

He later goes on to characterize violent movies and games as the heart of the problem:

"We have no problem letting our children go out and see—or stay home and watch—'slasher' films, a genre of movie that is aimed at the youth market. We have gone from the benign Pong video game in the 1970s to games in the 1990s that act more as murder simulators and permit youth to

THE MORE YOU KNOW

Intro to Marigul

Marigul Management was established in July 1996 as a joint venture between Recruit (60%) and Nintendo (40%). The name Marigul is a hybrid from **MARIO** and **seeGUL** (Recruit's corporate mascot).

Marigul

Marigul Management serves as an agent for the independent game developers. Once you sign a contract with Marigul, you don't have to worry about paying rent or electricity charge—just concentrate on developing the game. Marigul gathers the budget from investors for you. The only

Marigul's offices, located in Shibuya, look like a normal house from outside.

rule is that you must finish the game within five years.

Recruit (Marigul's parent company) has many faces. Their main business is publishing an employment information magazine for college/university graduates (where the name "Recruit" comes from). One of Recruit's subsidiaries is Media Factory, a magazine publisher. They also publish video games, the Pokémon card game and Pokémon music CDs in Japan.

RandNet DD is also a joint-ventured company between Nintendo and Recruit. RandNet is selling 64DD and they are also hosting the network service for 64DD.

Marigul's catalog of games includes: **Pikachu Genki Dechu** (Umbrella, 12/98) **Custom Robo** (Noise, 12/99) **Kyojin no Doshin** (Param, 12/99) **Echo Delta** (Clever Trick) **Derby Stallion GB/N64** (Parity 81) **Dobutsu Bancho** (Saru Burumel)

They also have several unofficial titles like Teo, Toy, Racing, DT. All titles are for N64, 64DD and GB.

Making Some Noise

A name you'll be hearing a lot more from this year is Marigul and its lineup of Japanese game developers. One of those developers is Noise, whose first title, *Custom Robo*, was just released in Japan. EGM Japanese correspondent Yutaka Ohbuchi sat down with Kohji Suzuki, president of Noise, and Hisakazu Hirabayashi, Advisor to Marigul to talk about the game and the industry in Japan. Here's what they had to say.

EGM: How did you guys come up with the idea of *Custom Robo*?

Kohji Suzuki: During the meeting for our first video game, one of the programmers had an idea where two players would shoot each other in a 3D environment. From the beginning it was set in a third-person viewpoint. If it was first-person, it would've been too much like *Virtual On*, and we thought that game isn't easy enough to get into, while a first-person game has a more hands-on feel. At the time we started development, the N64 was the only console that had analog control standard. With that stick, we can control the character easily if the camera is moving quickly.

EGM: How about the idea of the Robo itself?

KS: While battling in a third-person view was fun, it lacked the hands-on feel...some said that it looked small and tiny when compared to other multiplayer games. It looked like you were controlling an RC robot.

EGM: And it also has an element of dice.

KS: That idea came from the producer of the game—Tsunekazu Ishihara. He suggested it to give it more appeal, probably inspired by Pokémon. (Tsunekazu Ishihara is also a producer of the Pokémon series) and the tumbling of the dice added a random factor to the game.

EGM: You guys definitely took a lot of time to balance the *go parts* you can customize your Robo with.

Hisakazu Hirabayashi: Sarugakucho is a division within Marigul of about 40 people who test out the games. Existing debugging/assessment people, like Mano Club (an internal team at Nintendo which judges games, like NoA's Treehouse) look at mainly the finished product. We prefer to have people involved at a very early stage in development and let them play the game many times throughout the process so they can give us suggestions and ideas. They are very much a part of the development, working on the game with the programmers.

KS: When the game took some shape, we let them play down to the ground. We did most of the weapons' ideas but some of them came from test players at Sarugakucho.

EGM: Did any particular manga or anime you inspire you to develop this game?

KS: Definitely *Puraresu Sanshiro* (Puraresu = plastic wrestler), an anime series from the early '80s, although *Custom Robo* is a shooting game and *Puraresu Sanshiro* is a fighting game.

EGM: This is the first game from Noise. So what were you guys doing before Noise?

KS: We formed this company three years ago—

In *Custom Robo*, you build your own Robo fighter, selecting from 10 different bodies and about 90 different parts. Then travel to Holotables to battle other Robo owners.

Hisakazu Hirabayashi (below) and Kohji Suzuki (above), president of Noise, with his very own Custom Robo.

September 1996. Before that, we were all at Namco except one guy. We mostly worked on arcade games there. We weren't all there as members of one team—we worked on different games. Tekken was one of the popular ones some of us worked on [over 100 people work on the Tekken team].

EGM: What's the origin of the name, Noise?

KS: What was that...I think because it sounds good. Later on we cooked up the reason that it's because we are noisy guys or something... But I'm not sure we really are...[laugh]

EGM: Did you feel pressure from Marigul?

KS: Definitely not. We felt that it's not like developing a small puzzle game or something. We realized we were in the middle of a very intense situation and we had to develop a really good game. At the same time, we felt that what we were doing was worthwhile. This was what we were waiting for, this is why we became an independent developer. When we were at Namco, the situation was that we could only develop fighting games.... We thought we could do many different things in the console game space. Most people in our company had been working on arcade games for a long time and lost interest in them.

HH: No matter how talented they are, arcade game divisions have to develop a game which

can be played for three minutes on a single coin (300 yen). But there are tons of possibilities in video games and that seems to irritate them. Perhaps that motivated them to develop the scenario mode in Custom Robo. I've seen the kids in America playing Doom and Quake. I think Custom Robo is a lot like Quake. It has the same elements. I really hope that American players think Custom Robo is a well-thought-out, Japanese-crafted version of Quake. You don't need to use so keys, no need to regulate the clock speed, all you have to do is just plug in and play. Everybody can play it and even an experienced Quake player can find depth in its gameplay. I'd be happy if someone gave the game that kind of review. At the same time, I've been wondering why Japanese people don't play Doom or Quake (as much as American players do).

EGM: Is there any concrete plan to release Marigul's games overseas?

HH: I've been working on Marigul's overseas plans for about a year. We've been working to establish a company in America who will act as an agent for all Marigul-related games. The company starts up on New Year's Day. It will handle things like who will publish our games in that market. If our games are accepted by the overseas market, we'll release them. I think Custom Robo will definitely be released in America, although I can't say who will publish or what the U.S. name will be.

EGM: Lastly, can you tell us about Marigul's future plans?

HH: I cannot speak for Marigul. This is my own personal thought. Take this to mean that I am not saying that Marigul = Nintendo = Dolphin for sure. The game is changing and developers have to think about the future. Five years from now, I don't think console machines will serve as just game machines like it's been in the past. It will probably be a "home server" like PlayStation2, or it could be the set-top box that Microsoft is working on. With all those consoles, developers are not going to choose between them, but there will be one JAVA-based console which will do lots of things, not just play games. Next year, the Game Boy will be connectable with cell phones, and you can download games with i-Mode. The time will come that you can't differentiate home appliances from game consoles. In short—communication, broadcasting, video games, interaction...all those things will be combined. When that happens, game developers won't survive if they operate in the old ways. Hopefully we, Marigul and developers will be successful in the future. If you think that the game will be the same, and still it's a war between Sega, Sony and Nintendo, which game to put which console.... You'll be dead in the future.

The most challenging aspect of developing a game besides the usual technical problems is to create an engrossing story that's led by interesting characters that the player can identify with, then translate all that into strong gameplay. Because at the end of the day when technology plateaus and all the consoles can move 5 billion polygons per second with real time this and that, the only thing that will separate a good game from a bad one is the experience. We believe that a strong story supported by fun gameplay is the key.

We got the inspiration for Fear Effect from: Many different films and novels. We wanted to deliver a lot of John Woo action mixed with Quentin Tarantino and Robert Rodriguez's *From Dusk Till Dawn* experience. The visual inspiration for Fear Effect is mostly from films such as, *Blade Runner*, *Ghost in the Shell* and *Akira*.

Story behind our name: According to Greek mythology, the first god, Uranus (heaven) mated with Gaia (earth). From this union of heaven and earth, Kronos (kroh-nohs), the youngest and most powerful of the Titans, was born. It is from this supreme union that Kronos Digital Entertainment, Inc. derived its name. Everything You Need to Know That We Couldn't Fit Elsewhere

A Pokémon card with a swastika? Well, not exactly...when Kids in the U.S. discovered the card shown at right, parents immediately voiced their protest. The card, included in a Japanese Pokémon expansion set features the "manji" character—a symbol which means good fortune and can also represent a Buddhist temple. It closely resembles a swastika, the symbol most recognizable as a Nazi symbol. Since then, Media Factory, the company that produces the cards has agreed to stop making the card with the symbol.

Sega will introduce e service in Japan in February where players can download older Mega Drive (the Japanese version of the Genesis) and PC Engine (TurboGrafx-16) for between 200-300 yen a pop (\$1-3). The game is saved for a week on your VMU. It's unknown whether Sega will start a similar service in the U.S. (but we hope so!).

Tecmo will release *Runabout 2* in the U.S. In the first quarter of 2000. **3DO plans to make the first softball sports game for PC and PlayStation in February 2000 called Softball Slam.** Codemasters will begin producing Dreamcast games in 2000. No specific titles have been announced yet. **Square's Front Mission 3 is headed to the U.S.** (everybody cheer). The third Pokémon movie will hit Japan this summer. **Jeff Minter's Tempest 3000 for NUON is nearing completion.** NUON hardware and software are scheduled to be shown at the Winter CES in early January (full details on that and more from CES next issue). **Sonycom? Newest Colors of the DC Rainbow

Dreamcast is only a little more than a year old in Japan and already it's got more colored system casings than any other except the Game Boy.

Capcom and Sega are offering two special *Bio Hazard: Code Veronica* limited-edition systems. Only 2,000 of these will be offered, broken down between 200 of the special black S.T.A.R.S. edition and 1800 of the red Claire Redfield edition. Raffle entries for the machine will be taken in Japan beginning in January

2000, and the system will be available on Feb. 3, 2000. The pack includes the game, system, controller and VMU.

Sega of Japan is offering a special Model Seaman Christmas Package in December at HMV stores. Only 850 of these systems will be available and includes a controller and VMU.

Each of these special-edition packages is available for 34,800 yen (about \$340). And these aren't available in the U.S....yet.

Q-NARR

NUTTIN' BUT TOYS

On Level 11 of *Toy Story 2* you meet this fella. Amidst protests from Hispanic Americans in the Los Angeles area who say the character enforces a stereotype, Activision has decided to change the Bandito toy in the game. This is the first instance we can think of where a video game has incited a protest.

Quartermann - Video Game Gossip & Speculation

Has Capcom found another franchise to milk? Will the Resident Evil series move backward as well as forward? Virtua Fighter 4 any day now? Square working on X-Box? There's all kinds of rumors around at the moment—and the Q-Spies are always the first to bring it to you. If you want to be the first with the gossip each month—check our preview lines: gooo PRE VIEW for this information and more.

RUMOR Virtua Fighter 4 has finally been confirmed and is likely to hit a lot sooner than anyone imagined.

TRUTH In an interview with a Web site affiliated with the Official U.S. Dreamcast magazine, Virtua Fighter creator (among many other games) Yu Suzuki intimated that a fighting game "with a four in the title" was in development and would share graphics technology with the incredibly impressive Shenmue. What else could this be but VF4? He also hinted that the game could be released much sooner than anyone could have anticipated. We'll bring you more on this next month.

RUMOR The recently released PC adventure game (starring David Bowie) Omikron: The Nomad Soul will be heading to the Dreamcast before the spring.

TRUTH Always intended as both a PC and a console game, this ambitious RPG hybrid went through a lot of changes during its development. Recently canned in its PlayStation form, the original intention was to bring a huge living environment to the player which incorporated a full RPG engine and a fighting system that was intended to rival Tekken. This was later watered down, and became a huge sprawling RPG with spiritual overtones. David Bowie supplies the

soundtrack...and even stars in the game as a (guess what?) rock star. The Dreamcast version could be with us in the first quarter.

RUMOR The sequel to the popular Capcom fighter Power Stone has been generating all kinds of gossip. Expect to see four-player fun in this Naomi-powered arcade game.

TRUTH Set to hit real soon in the arcades, we can expect a Dreamcast version almost simultaneously. The four-player rumor has been "unofficially" confirmed—and we also hear that the new game will feature vehicles and more powerful weaponry.

RUMOR Resident Evil: Zero is no longer coming to N64...maybe a Dolphin version instead?

TRUTH Although excellent...it seems that Resident Evil 2 64 didn't make an awful lot of commercial sense for Capcom—so the Zero project has been redeveloped as a "next-generation" game. This is yet to be officially confirmed (Capcom people have been cautious even acknowledging the existence of RE:Zero) but given the limited information we do have...it seems likely that the project has indeed been moved to Dolphin, or possibly PS2. We also know that the next "official" sequel in the series will be coming to PS2 soon after launch.

RUMOR Square may well be an early adopter for the Microsoft X-Box. **TRUTH** We've yet to get confirmation of this...but there are many rumors flying that Square is in negotiations with Microsoft to develop new products (not just ports) for the PC-based wonderbox. FFX perhaps? Given the rumored networked nature of the game...it seems likely. Maybe comments that Japanese development wouldn't adopt the system were a little hasty.

RUMOR Despite the fact that it was crap, Slave Zero has proven to be so spectacularly popular on Dreamcast that Infogrames is planning a Dreamcast-specific sequel.

TRUTH There's no accounting for taste...but it seems that the Slave has proven to be a whopping success. Apparently the sequel will be developed for DC only, and as a result won't inherit any of the sloppy PC code that caused the atrocious frame-rate and glitchy graphics. No word on a date...but it could be with us by next Christmas.

RUMOR The decidedly-mediocre DC game Armada will see a somewhat more impressive sequel within the next year.

TRUTH Metro3D representatives were recently seen in Sega newsgroups defending their game from the onslaught of negative comments, and in doing so let slip that the sequel will be much better. Let's hope so.

RUMOR Medal of Honor 2 is in development, and is likely to hit on PlayStation 2 first.

TRUTH Dreamworks recently posted job ads for a new team to work on the sequel in the gaming trade press. When probed by spies from the Q network, representatives from both EA and Dreamworks refused to comment on which system work would begin on. We'd love to see a version on Dreamcast, but that seems highly unlikely.

RUMOR Sega GT will feature VMU mini-games developed in conjunction with car manufacturers.

TRUTH Apparently so...and playing these mini-games will allow you to open up new features in the main game. Take that PocketStation and Gran Turismo.

Q-SPY SPECIAL REPORT

Dino Crisis Madness

RUMOR The success of Dino Crisis in both Japan and the U.S. has assured its future as another franchise for Capcom to milk.

Originally thought to be an off-shoot of the whole "survival horror" thing, it looks like we can now expect lots of cool new stuff with the Dino Crisis moniker attached—and on a variety of systems.

The rumors are many and varied...but here's what we've heard from multiple sources so far (so they're most likely):

- Dino Crisis 2 — PlayStation and PlayStation2
- Dino Crisis X (name Iba) — PlayStation2
- Dino Crisis — N64
- Dino Crisis — Dreamcast
- Dino Crisis — Game Boy

TRUTH The Q-Spies have been digging deep on this one...but things are tough to get a "real" story on. Dino Crisis 2 on PlayStation and PS2 was recently confirmed by Capcom President Kenzo Tsujimoto, and it wouldn't surprise us at all if another Dino Crisis game also made its way to PlayStation2 within a year of launch. As for the DC version, we really have no idea. Capcom seems enamored with the system, but any specific information beyond informed speculation isn't available. The N64 rumor has come from a number of sources, including some of our spies in Japan. Capcom is very secretive about plans for Nintendo projects (see above)...so the best news we can confirm there is that "it may be" happening. Game Boy? Who knows? We never thought Resident Evil would come to the handheld so anything could happen with other franchises.

WARNING: Previews marked with international symbols may or may not be released in the U.S. They are designed to run on Japanese or European PAL systems. Import at your own risk.

Once upon a time, there was this little 8-bit portable system. It wasn't that great, but it had Tetris. So the system sold. And it sold. And just when you thought that system reached the end of its lifespan, along came something called Pokémon to breathe new life into it. Oh joy.

Since you all clearly love the little monsters so much, we have lots to give you this month. Silver, Gold, Trading Card Game and Stadium...they're all here in this issue.

But wait! What's that new portable system that's causing quite a stir? Why, it's the Neo-Geo Pocket Color! This month, we decided to add a NGPC Previews section, since quite a few cool games are coming out for it. Even though the three we're covering this month (Cardfighter's Clash: SNK vs. Capcom, Match of the Millennium: SNK vs. Capcom and Sonic the Hedgehog: Pocket Adventure) will be out by the time you read this, we think they're such cool games, that they're worth looking at in EGM. We can't promise regular NGPC coverage (since there aren't a whole lot of games for that system), but we'll update you when we can. Do you want to see more NGPC previews? Fewer? Don't give a crap either way? Write us and let us know.

All right...we know you guys don't really care about GBC or NGPC when we have PlayStation2 and Dreamcast to discuss. Fear not. We brought back

Move over GBC, there's a new portable in town. Check out our shiny new Neo-Geo Pocket Color Previews section in this issue...

the PS2 section (wait until you see the new Tekken Tag screens!), and this month, we have the largest Dreamcast Previews section yet. Don't skip by the Resident Evil Code: Veronica blowout. Mark our words. It's gonna be one of the hottest games of 2000.

Speaking of PlayStation2 and Dreamcast...a lot of magazines and Web sites out there are running any PC screenshots they can as PS2 and DC stuff. We will only run genuine PS2 and DC screenshots, and when they're not available, we'll use PC screens only if the developers can swear to us that they'll look identical to the console versions. Hey, we're not going to show you a Voodoo 8, 512k x 412k PC screenshot and tell you that it's a Dreamcast game when it's not. If we use PC screenshots for a PS2 or DC game, we'll let you know (and rest assured, it'll represent what the real console product will look like).

Oh, by the way, the Grand Theft Auto 2 screens in this issue are from the PC version. But it will look exactly the same on the Dreamcast. :-)

Resident Evil Code: Veronica

Publisher: Capcom
Developer: Capcom/Sega

Genre: Adventure
% Done: 80%
Release: March 2000

The Good: Nemesis who? THIS is the sequel Resident Evil fans have been waiting for!

The Bad: If you don't yet owe a DC, it's time to break out the credit card. (But is this really a bad thing?)

And The Why: Steve Barriside's uncanny resemblance to Leo DiCaprio. Why, Capcom, why??

Cine-mazing

Code: Veronica's intro sequence rocks. While these pics make for a nice teaser, you've really gotta see the thing in motion!

Code: Veronica is packed with more cutscenes—both real-time and FMV—than any previous RE game.

As you can see by this close-up of a Bander (one of the new mutated freaks in RE: CV), the level of graphical detail is simply astounding.

Let's face it. Even the most devoted Resident Evil fanatic has to admit that RE 3 Nemesis was a bit lacking in the story department. More of a game for "hardcore" RE players, with its extreme difficulty and overabundance of combat, RE3's overall plot (or lack thereof) made the game seem more like a side-story than an actual sequel to Resident Evil 2.

That's where Code: Veronica comes in. Taking place three months after the events of Resident Evils 2 and 3, Code: Veronica picks up where RE2 left off, with Claire heading off to Umbrella HQ in Europe to search for her missing brother, Chris. Not long after her arrival, she gets captured by Umbrella and taken to a remote prison

facility on a desolate island far, far away. After a mysterious attack on the prison base leaves the place in shambles, Claire manages to escape. While we don't want to give away too much of the plot, we can reveal a few juicy tidbits: First, the prison island isn't the only place that you'll get to explore. About midway through the game, things will shift to an entirely different place—Antarctica. From there, you know what happens. Also, if you were wondering why the game is called "Code: Veronica," here's the deal: Veronica is the original head of the Ashford family—the family that founded Umbrella, Inc. She's long gone now, but you'd have to think that something's up with her if her name is in the game's title. Finally, the main adversaries in CV are Alfred Ashford, the current head of the Ashford family, and his sister Alexia. Both are descendants of Veronica.

Thanks to the awesome power of the Dreamcast, Code: Veronica's visuals are absolutely stunning. The facial details on the characters and monsters rival those of the characters in Shenmue, and the dynamic lighting effects help to create an atmosphere that's chillingly realistic. Speaking of atmosphere, this is the first RE game to ditch the prerendered backgrounds in favor of a real-time environment. Similar to Dino Crisis (though much, much better-looking), RE: CV's world is entirely 3D. Now camera movements are more cinematic, and the game world doesn't feel as "detached" as it did

Continued on page 64

Code: Veronica is filled with all the spills, chills and thrills that made its predecessors so popular. Needless to say, this is a game that was meant to be played at night. In the dark. Alone. (Teddy Bear optional, though we might suggest a mender-dier for those among you who are easily "moved" by the kind of terrifying jump-out-of-your-chair antics the RE series is known for.)

in past games. Best of all, there's a new first-person view mode that allows you to play the game from your character's perspective. This is truly awesome, though so far we haven't found anywhere where it was actually necessary to switch to this mode—it seems like more of a novelty than anything else. Still, there's nothing quite like shooting up zombies three feet away from you through the eyes of your character. It's really quite fun. (Something worth noting: Capcom told us that there's still a slight chance this mode will be dropped from the final version of the game, though it's 95% likely to make it in. If it does get dropped, it'll most likely be because of technical issues. It was hyped back when the game was first announced in Japan, but since then, producer Shinji Mikami has kept quiet about the feature.)

Similar to Resident Evil 2's Zapping System, Code: Veronica features an all-new gameplay element called the Real World System (R.W.S.). The game

other's quests. This time, however, rather than seeing the same story unfold from two different viewpoints, the events are sequential. So the things you do as Claire—doors you open, items you pick up or leave behind, puzzles you solve—will be apparent later in the game when you follow her trail as Chris. Is this cool, or what?

There are a few other gameplay improvements worth noting, the coolest of which is the ability to wield two guns at once. That's right, there are a few weapons in the game (such as the Calico M-100P or the submachine gun) that come in pairs, and besides the fact that they look extremely cool, they come in especially handy when you've got hordes of zombies approaching from all sides. Best of all, they auto-aim independently! Also new is an enhanced map system that has color-coded doors to let you know if you've been through them or not, or if you have the key necessary to open them. It sounds minor, but it's a great help. The map also shows

According to Capcom, the first-person view in RE: CV is 95% certain to be in the final game, pending some minor tweaking.

OLD-SCHOOL EVIL

Like the original Resident Evil, you can inspect items on the sub-screen and view them in 3D form. This is essential to solving some of the puzzles in the game.

CASTING CALL

Who's Who

Claire and Chris aren't the only main characters in CV. Here are some of the other faces you'll come across.

The current head of the Ashford clan, Alfred is a strange bird indeed. What's he trying to accomplish?

Alexia, a twin, is Alfred's sister. Some say that Alfred is just a puppet and that she's really in charge.

Leo—err, Steve—turns up early on in the game. This hyperactive kid is also a prisoner on the island.

This mysterious fellow helps Claire escape from prison at the outset of the game. What are his true motives?

FIRST-PERSON ACTION

VM-USEFUL

Thanks to the VMU, you'll no longer have to switch to the sub-screen to view your health. Nice!

Continued from page 63

(Above) The beautiful 3D environments in Code: Veronica are some of the most impressive to date. The spectacular graphics only serve to add to the already chilling atmosphere that the RE games are well-known for. (Left) Chris Redfield, star of the original Resident Evil, is back as a playable character in Code: Veronica. You won't get to play as him, however, until disc 2.

save points, item boxes and any objects you may have left behind. Useful stuff. Finally, you can view your health at any time by simply looking at your VMU screen, which re-creates the life monitor that you'd otherwise have to switch to the sub-screen to view. This is quite handy as well.

Oddly enough, with all these gameplay improvements, the game takes a couple of minor steps back, too. Some of the cool stuff that was introduced in Nemesis (being able to blow up barrels, the ammo mixing feature, walking up stairs without having to press the action button) are missing in Code: Veronica. The decision-making element ("Fight the Nemesis or run like a puss?") is nowhere to be found. And the "sometimes it works, sometimes it doesn't" dodge feature has been

removed as well. Disappointing for sure, but trust us—after playing for an hour or two, you'll be so caught up in Code: Veronica's atmosphere and engrossing story that you'll have forgotten all about these minor omissions. At least they kept the 180° quick-turn feature—a must for all future incarnations of the series.

One last bit of cool info—by fooling around with our preview version far too much (we spent hours upon hours with the game), we stumbled across a couple of "Extra" modes, that will likely be available after beating the game. We don't want to spoil it, but needless to say—once the main game is over, you won't have to shelve it right away...

In development for more than two years, Resident Evil Code: Veronica is an important game not only for Capcom, but for Sega as well. It's the kind of game that'll drive hardware sales (especially in Japan), and its exclusivity (for now, at least) means that a lot of PlayStation-owning Resident Evil fans are going to be making the jump to Dreamcast soon. This editor already went out and bought a DC just for this game...perhaps when it arrives in stores in March, you will too. 🐾

Steve Burnside shows up only on and remains a major player throughout. In fact, it's rumored he may even "get it on" with Claire, though we can't confirm this. You'll get to play as him briefly on disc 1.

SHE'S GOT GUNS

Claire Woo?

Code: Veronica is the first RE game to allow the use of two guns at once, John Woo style. They even target independently!

"To really understand how decomposed these zombies are you have to be in close personal contact," Stick thought as he smashed his fist through the braindead

ghoul. But this was no time for theory. Three new bonebags were moving in fast, and Stick had lost his gun. They charged. He wrecked the first one with a series of quick uppers, clocked the other one with an elbow pop, and dropped the third guy with a reverse rockef crotch kick. Then he spotted his gun. Unfortunately, it was stuck in his face with a zombie behind it. "Yo, voodoo child," said Stick "Your trigger finger's missing..." sega.com/games

Street Fighter III: Double Impact

Publisher:	Capcom
Developer:	Capcom
Players:	1-2
Genre:	Fighting
% Done:	95%
Release:	April 2000
Age Gr.	None
Web Address:	www.capcom.com
The Good:	Fantastic animation and parry system.
The Bad:	Mastering parries.
And The Why:	Some characters are just lame.

Although it's not Elena's best Super Art, Spinning Beat looks cool and is useful against jumping opponents.

Double Impact contains both SF III: New Generation and Second Impact, but not the recent arcade release, Third Strike.

TECHNIQUE

Parry This

The newest and most significant addition to the Street Fighter combat system is parrying. Requiring much more skill than Alpha counters, you must press forward immediately before an attack makes contact in order to deflect it and escape undamaged. You can parry high or low attacks and even entire Super Art combinations. Double Impact has a special training mode that can help you refine your timing.

Usually Capcom is very quick about porting hot arcade fighters to home consoles, but it seems like it took forever for any of the Street Fighter III's to make the journey. From a technical standpoint, the game boasted insane amounts of character animations and ran on the CPS III arcade board. In comparison, Marvel vs Capcom (no slouch in the animation department itself) ran on the CPS II. The memory capacity that SF III demanded made it impossible to port the game to anything less than the Dreamcast, so in that regard, the wait has paid off—now, we have a perfect conversion. Every animation frame is there with nearly invisible loading times. Capcom even took advantage of the DC's audio capabilities and

reproduced the Q-sound faithfully. Ah...delight for both the eyes and ears.

Double Impact packs in both SF III: New Generation and Second Impact, but there's really not much difference between the two aside from slight character tweaks, a challenge round and three new characters. It's a shame that Third Strike is not included, seeing that it has better character balance, a grading system and five new characters headed up by fan favorite, Chun-Li. For whatever reasons, none of the SF III games were very popular in the U.S., so the home version will be the first time many will seriously play the game.

For the uninitiated, the play mechanics are fundamentally the same as previous SF titles. Super combos are back, but now they are called "Super Arts," and you can choose one of three to suit a particular strategy for your character. The biggest addition is aggressive blocking which is referred to as parrying (see sidebar). This changes the dynamic of play considerably; you'll either love it or hate it. The only returning characters from previous installments are Ryu, Ken and Akuma.

Sega's last console may have been a 2D powerhouse, but Street Fighter III: Double Impact proves the Dreamcast can do everything 2D the Saturn could and much more. And with SF Alpha 3 making its way to this system a little later, Street Fighter fans may have found their dream machine.

CHOO CHOO SPACE SHUTTLE

Remember Astrotrain? It was an Autobot Transformer (classified as a "Triple Changer") that could transform from a steam locomotive into a space shuttle. Whose stupid idea was that?

Chu Chu Rocket

Publisher: Sega
Developer: Sonic Team
Players: 1-4
Genre: Puzzle
% Done: 90%
Release: First Half, 2000
Case Or: None

Web Address: www.sega.com

The Good: Fast-paced, great party game, internet multiplayer.

The Bad: The graphics are stylish but a bit utilitarian.

And The Why: You don't really need another addiction in your life.

Like the old action puzzle game *Lode Runner*, many of the stages resemble pictures, messages and other bits of humor from Sonic Team.

Sure, the graphics aren't much to look at, but they're cute, clean and stylish as hell.

PEEK-A-CHU

It's A Chu Chu World

So what the heck does "Chu Chu" mean anyway? The word "chu" is the Japanese equivalent of a "squeak," or the sound a mouse makes (hence Pikachu, the lightning rat). In Japan, Chu Chu Rocket launched with the best commercial ever made (when the cat chomps down on the chu chus, there's blood everywhere). Here are the lyrics, as transcribed by Peter Bartholow of videogames.com. "Chu Chu Rocket, let's save the mice! Chu Chu Rocket, the cat is scary! Chu Chu Rocket, the rocket is awesome! TSUBABABABA!" The game rocketed to number one on the charts its first week of release.

When Sega announced three new titles from Sonic Team last August, nobody expected Chu Chu Rocket to be among the hit list. Despite the glaring lack of a Dreamcast NIGHTS or Burning Rangers sequel anytime soon, Sega fans knew that Chu Chu Rocket would be special, just by virtue of hailing from Sonic Team. After spending all month with the import version of Chu Chu Rocket, we were ecstatic to learn that Sega of America is set to localize this bizarre little gem for the U.S. market.

The object of Chu Chu Rocket is very simple: Guide as many rodents to your rocket as possible within the given time and watch the mice blast off into the great abyss. Each stage is comprised of six different objects: walls, mice, cats, pits, arrows and the player's rocket. Because it's a puzzle game, each item dictates one aspect of behavior on the playing field. Chus will run along until they hit a wall; if

there's nowhere to go, they will either run in an infinite loop, or run along the wall until the next obstacle presents itself. Just like in real life, cats will traverse a pattern that's occasionally altered by walls and arrows...oh and they'll kill mice too.

Players move a colored cursor around and can place up to three arrows on screen to control the trajectory of mice and cats. Is player one getting too greedy with the little chu chus? Send a cat over to his rocket and watch his numbers dwindle. Or you can place arrows to siphon off your competition's flow of mice and redirect them to your own rocket. When a pink mouse runs into your rocket, it triggers a random event. Events like speed-up, slowdown, chu chu fever (sends out an endless flow of mice for a limited time), and neko fever (neko means cat) provide plenty of opportunities for players to even out the score late in the game. It all amounts to one of the most hectic and well-balanced head-to-head puzzle games we've ever played.

The game is presented with a wide variety of modes. Among them are the one- through four-player versus modes, puzzle mode (which can be played co-op) and even a Lode Runner-esque level builder. In Japan, Chu Chu Rocket sold for 2800 yen (about 25 bucks), or with a limited-edition Chu Chu Dreamcast controller for 4800 yen (45 bucks or so). It's still unknown at this point whether Sega will sell the game at a discounted price stateside.

Chu Chu Rocket comes with its own level editor, so you too can design nasty hard levels to use in puzzle or versus modes.

THE HARD FACTS OF LIFE

According to the U.S. Department of Agriculture, 154 "million dozen" egg shells were broken during October 1999, up nine percent from October a year ago.

Elemental Gimmick Gear

Publisher:	Vatical
Developer:	Hudson Soft
Players:	1
Genre:	RPG
% Done:	85%
Release:	January 2000
Box Set:	None
Web Address:	www.vatical.com
The Hook:	Old-school role-playing coming to the Dreamcast.
The Bad:	E.G.G. was originally developed for the Sega Saturn.
And The Ups:	Highest cholesterol count of any Dreamcast game yet.

The graphics in E.G.G. are gorgeous for a primarily 2D game. It was originally developed for the Saturn. Go figure.

Like *Evolution* and *Time Stalkers*, E.G.G. is basically a one-town game.

SPIN CITY

Dizzy

Did you ever go to the playground as a child and spin yourself long enough to make you wanna puke? Everyone has done this at least once, and you'll get to do it again if you want to play Elemental Gimmick Gear.

One of E.G.G.'s most powerful attacks is his spin-attack. Not only will you be required to use it to open doors and solve some puzzles, but also you'll need to do it in various battles where the enemy is tougher than your average bear. Just like a regular egg it's versatile enough to come scrambled, over-easy and fried, so too is E.G.G. a multi-talented egg.

By the time you read this, E.G.G. should be out on store shelves, so go check it out!

In a surprise move, Vatical Entertainment recently announced that they would be bringing Hudson Soft's Japanese role-playing game, Elemental Gimmick Gear (or E.G.G. for short) to the U.S. Perhaps even more surprising is the game's level of completion, and the fact that it's being readied for a January 2000 release. What is Elemental Gimmick Gear, you ask?

E.G.G.'s story revolves around a strange, egg-shaped mech found during an excavation in the ancient city of Fogna. Apparently the E.G.G. functions as some sort of suspended-animation device, for inside the E.G.G. lies a person referred to as the Sleeping Man. While the Sleeping Man is cuffed off somewhere else to continue his extended

nap, the city's engineers attempt to emulate the E.G.G.'s bio-structure in their own robots, designed for use by consumers and military alike. Naturally, everything goes berserk, and it's up to the recently awakened Sleeping Man and his E.G.G. to put an end to the chaos that ensues.

In the tradition of old-school RPGs like Square's *Chrono Trigger* or Final Fantasy, E.G.G. features overhead 2D graphics that take advantage of the Dreamcast's superior color palette. The graphics are lush, and the characters are well-animated. Enemies and locales are all beautifully rendered in 2D, but, during significant boss-battles, things take on a decidedly 3D appearance. All of the fights are executed in an action-RPG fashion and are fully polygonal and 3D. Perhaps E.G.G.'s most significant attack is the move where he pulls in his arms and legs (like Gamera) and begins a deadly top-spin that usually does a good job of clearing out a room. Unless you have a special item, though, this move takes way HP from your E.G.G., and so, must be used sparingly. Of course, with a name like Elemental Gimmick Gear, you can expect various elemental powers to be featured prominently in E.G.G.'s attacks.

It's good to see yet another quality, niche title make its way into the hands of the large U.S. market. Now let's hope some publisher picks up *Frame Gride* and *Berserk*. ☹

1,400

...polygons per player model in Sega's NHL 2K. The more polys, the more lifelike the characters look.

NHL 2K

Naturally, due to the name, you probably think NHL 2K is another Visual Concepts product right? Nope, it's being developed by **Black Box** for Sega, a team comprised mainly of former Radical Entertainment programmers (remember NHL Powerplay?). Needless to say these guys know their hockey. NHL 2K features all the NHL licenses, players and stadiums you could hope for, not to mention great graphic detail. The player models alone feature some 1,400 polygons per character. Facial detail is as close to the real thing as we've seen (outside of NBA 2K). For animation, more than 1000 motion-captured moves are used. Even the fighting looks ultra-realistic. With any luck at all, NHL 2K will continue the high standards that NFL and NBA 2K established. Look for the game in **February**.

Giga Wing

We've been updating for you Giga Wing's journey from the arcades to the Dreamcast for the past six months...now we're happy to report that **Capcom's** latest 2D shooter will make its way stateside on Sega's machine. This game is, by far, the most 2D-intensive vertical shooter we've ever played. For the love of god, just look at these screenshots! Giga Wing is set for release in **April**.

REMEMBER?

For Midway's sake, hopefully no one will associate 4 Wheel Thunder with their previously released super-stinker—Off-Road Challenge.

4 Wheel Thunder

Midway's 4 Wheel Thunder is gorgeous, rivaled only by Sega Rally 2 for creative use of lighting, lens flare effects and detail. The guts of the game include 12 indoor and outdoor tracks in six different environments. The courses are extremely long and wrought with rolling hills, jumps, narrow passes and much more. At this point, the game looks great but needs a bit more speed. Look for 4WT in **May**.

Tech Romancer

Right alongside Street Fighter III in Capcom's impressive list of games to bring stateside is Tech Romancer, a 3D fighting game inspired by giant robot anime of the last three decades. The gameplay in Tech Romancer is highly reminiscent of Bandai's Gundam: Battle Masters series. Each player has "damage meters" which slowly fill up as you pummel each other silly with a wide array of weapons. Heavy hits will knock a "power-up" from your opponent, which then can be picked up and exploited to your advantage.

Graphically, the game is sweet. The level of articulation in each mech's animation is detailed to the extreme. So far, we've spotted the following parodies: Mazinger Z, Getter Robo, Macross, Evangelion, Gundam and many others. Tech Romancer is set for release here sometime **this spring**.

WHAT'S A WISPP?

In addition to being the mystical beings you grab in *Draconus*, a Wisp is a term for an experiment with a self-compiling compiler for a simple list-processing language. Whatever. Wisp is also the name of a popular ski resort in Maryland.

Virtua Striker 2

There's been a decided shortage of soccer games in the U.S. since the Dreamcast launched. In Europe, developers are falling over themselves to bring the most popular sport in the world to the Sega system. *Virtua Striker 2* has been waiting in the wings for some time, and after wowling players in the arcade, it's now just about ready for release. Developed in-house by Sega and set for release in March, it features some of the best graphics you're likely to have ever seen in a soccer game. Because of its pedigree, the gameplay itself is very arcade-like, but it delivers enough thrills to keep casual fans of the sport occupied. You play with 32 international teams, and you get to have a kickabout in six different stadiums. Show-offs will love the fact that you can save cool goals to the VMU.

Draconus: Cult of the Wyrms

Draconus: CoW (formerly *Blades of Vengeance*) from **Treyarch** and **Crave** has a definite Gauntlet feel with a healthy dose of Golden Axe thrown in for good measure. And since it's on the Dreamcast, it's 3D and quite pretty. You control one of two types of characters: A hulking warrior man with a take-no-crap attitude, or a deadly female sorceress. You have to search for mystical wisps (which allow you to upgrade offensive, defensive and magical attributes), and eventually make your way to the evil Dragon Lord (note: Dragons are also known as wyrms) who is terrorizing the land. Although there are various tasks to complete and NPC characters to interact with in each level, you'll encounter plenty of hacking and slashing while playing through the game's 15 levels. After all, *Draconus* is an action game. When you butt heads with one of the game's 30 types of enemies, you can go to work on it with a series of offensive combos or magic, along with timed use of your shield. There are multiple weapons and spells to upgrade as well. Look for it to hit store shelves in **March**.

FIGHTING FORCE 2

You're alone on this mission,
so credentials are all
you've got to go on.

It's just you and your instincts on this one. So you've only got yourself to blame if you fail. Burkhardt's not an option on this mission. Your job is to take down **Hawk Manson**, operative of the government espionage corps, SI-COPS, is to maneuver in and out of R&D installations on an all new 3D game engine. You've got an arsenal of hand-to-hand combat moves and equipment to the tune of 20+ new weapons. But don't let that inflate your head. Gear up. Get going. The world won't save itself!

Swirl

It's FREE! There...did that get your attention? By the time you read this, new Dreamcasts should be bundled with this Columns-like puzzle game. **Sega** will be distributing Swirl with the next AT&T Web browser update (scheduled for **February** or **March**), so existing DC owners will be getting it for free as well.

Swirl's concept is simple: Match up the purdy swirls of color. But the fun is in the multiplayer execution. Since you can play Swirl either real-time or turn-based, you can do it four-player split-screen style, or send turns over Dreamcast e-mail. You can even use the e-mail thing to play against PC opponents (who can download the game for free). Sega will also have a place for show-offs to post high scores on the Internet.

Swirl is a **Sega PC**-developed puzzle game.

ESPN NBA Tonight

Konami will release their very own DC basketball game sometime in **early 2000**. Beyond full NBA licenses, the title features play-by-play by Brent Musburger, extensive animation (including loads of facial expressions) and a heapin' helpin' of ESPN, TV-style atmosphere. Check out the Chris Mills interview (top right picture)—outstanding. We can't wait to get our hands on this pup for an NBA 2K comparison... Competition is a good thing.

Plasma Sword

The sequel to one of the PlayStation's most underrated three-dimensional fighters, *Star Gladiator*, is coming to the Dreamcast courtesy of **Capcom**. Originally done on the PlayStation arcade hardware, the DC version will sport slightly improved graphics (it's definitely not a *Soul Calibur* arcade to DC level of improvement) and special effects galore. Choose from 22 different characters who each has his or her own special weapon. Look for *Plasma Sword* this **February**.

Grand Theft Auto 2

If mowing people down with your ride, delivering drugs to street-corner pushers and other such criminal behavior tickles your fancy—but you hate the idea of doing hard time—*GTA2*, coming from **Rockstar** and **DMA Design** in **April**, is the perfect way to get your fix. Align yourself with a particular gang, work your way up the ranks and gain respect by completing naughty jobs around town. But watch out for po po.

In response, CRI has catered AeroDancing F heavily toward modern jet warfare. Players will be able to pilot a wide variety of fighters, including the F-14, F-15, F-16, F-18 and F-4 Phantom. CRI's also added a split-screen two-player deathmatch mode. AeroDancing F is due out **spring of 2000** in Japan.

Bakuretsu Muteki Bangaio

Treasure recently released the Dreamcast version of their N64 shooter Bangaio. We got our hands on the import, and while the game looks better (translucent explosions, more detailed sprites, higher resolution), it's still plagued with slowdown during intense sprite storms. Regardless, it's still a brilliant game and you should still import it. We hope Treasure takes the time and develops a DC game from scratch next time!

Mario Party 2

Publisher: Nintendo
Developer: Hudson Soft
Players: 1-4
Genre: Miscellaneous
% Done: 100%
Release: January 2000
Age: None
Web Address: www.nintendo.com
The Good: A few new ideas, like dueling and in-game item gathering.
The Bad: One-third of the mini-games are rehashes.
And The Info: Shawn Smith winning the crane game, even though he was watching the wrong character on the TV screen.

Nintendo and Hudson Soft spiced up the playing board a bit for the sequel. On the left, you can see:

1. New special spaces, like this slightly obscured treasure chest spot which gives you free items. Items like the Golden Mushrooms which...
2. ...let you move three die rolls' worth of spaces instead of one. Or, you may receive the key that allows you to...
3. ...pass certain locked gates to access new areas of the board. You can only carry one of these special items at a time. They're represented by...
4. ...this little lion right here.

RETURNING GAMES

Oldies But Goodies

Twenty of Mario Party 2's 64 mini-games are remakes of popular ones from Mario Party 1. The differences are mostly cosmetic (different backgrounds, etc.), but some gameplay has changed as well. The mine cart race, for example, now takes place on a whole new course, while the Hot Bomb game requires a button press to actually catch the Bob-omb this time around. Shown above is a team (2-on-2) version of the Balloon Burst competition.

Oh—by the way—gone are the spinning analog stick games. Nintendo hinted at broken controllers and/or blisters as the reasons for the exclusion.

This January, Nintendo will be bringing out the sequel you've all been dying for. Who cares about a new Metroid or Super Mario 64? Mario Party 2 is just the thing to keep us N64 owners happy (Yes, that's sarcasm you hear). It's not that we don't like the party cart, mind you. It's just a "kinda, sorta want" type of game we've been seeing a lot of lately from Nintendo (like DK64 or Jet Force Gemini), not a "really, really want" (when is Perfect Dark coming out again?).

If you never played the original, you missed out on a fun, multiplayer board game that was chock-full of imaginative mini-games. Now the sequel is here, complete with gameplay tweaks and new four-player competitions.

A few things have changed from the first outing. The biggest difference is the way items are handled. Instead of saving up coins to buy magical blocks or whatever after the game's over, everything is now located right on the board. You can find things like a bell that summons the mischievous Boo (to steal coins or stars from helpless opponents), mushrooms that let you advance up to three dice rolls' worth of spaces, or a mask to temporarily turn you into a coin-stealing Bowser. You can find these things in item shops (for a fee) or for free on item spaces, but they're only one-use items that don't carry over into your next game of Mario Party 2. In fact, the only permanent things you can buy with the coins earned

in a game are the mini-games themselves. Gone are the purchasable Casino Banks, Random Blocks, etc.

Also new is the Koopa Bank. It collects five coins every time you pass it, then gives the pot to any lucky player who lands on one (it's sort of like the unofficial "Free Parking" rule of Monopoly). If you're playing on the hidden Bowser stage (which you have to open up by beating the other five game boards), however, the reverse happens.

This time around, the party is host to 64 mini-games—a few more than last time. Forty-four of them are brand-spankin' new, while 20 come from the original game (most are modified a bit). One of the new types is the Battle Mini-Game, which you get if you end up on a lightning space. Land on this baby and all players must donate an equal amount of coins, with the winner of the battle getting two-thirds of the pot and Mr. Second Place getting the rest. You can also have one-on-one face-offs. You're thrown into these special duels if you land on the same spot as another character during the last five rounds of play. The challenger posts the amount he or she wants to wager, and both players bet this amount. Winner takes all, of course.

Mario Party 2 has lots of new stuff and lots of old stuff, too. If you couldn't get enough of the original, then Mario Party 2 is just right for you. Read the reviews in this issue to see what the Crew (almost all fans of the original) have to say about the sequel.

So, now we know when the U.S. version will be arriving...most likely **November**. As for the Japanese release, it's still on for March. Meanwhile, here are some new screens from Nintendo Power Source.

Pokémon Stadium

Nintendo will release **Pokémon Stadium** in **March**. It's co-developed by **HAL Laboratory**, and stars all 151 Pokémon (see preview in EGM #120). New to the game is a mode where you take photos of your favorite Pokémon to print out, much like in **Pokémon Snap**—only they stay still. After numerous delays, it's finally here. The finest racing game of all time? With over 500 cars it's got lots more to choose from than the first.

Tomb Raider 2

The follow up to the popular platform adventure is now in 3D and features vast and complex levels. Something a little different for platform game fans.

Die Hard Trilogy 2

Follows the same format as the original...driving, shooting and 3D action. Completely new story though...nothing to do with the movies. Weird.

Mazechi VF-2

Big robots with big guns in this fast paced 3D action shooter from Bandai. Fans of the Robotech franchise will love it.

NBA Shootout 2000

Shy Studios returns to basketball after a hiatus with a latecomer to the basketball scene. Look out for a new engine and new features.

Lunar 2

The success and level of interest in the first Lunar assures that we get the sequel. RPG fans should set some time aside for this.

Countdown Legends

Midway's popular update of the ancient arcade game brings the whole thing into 3D. Best played with three friends (or enemies.)

Tekken Tag Tournament

Here are the newest screens from **Namco's** blockbuster beat-'em-up, **Tekken Tag Tournament**. In these screens you can really see the detail put into the characters—an attention to detail that rivals even the amazing job the company did on the Dreamcast version of **Soul Calibur** (which is still heavily played in the EGM offices daily). This is going to be the PS2's killer app, available on the day it launches in Japan, **March 4, 2000**.

Ridge Racer V

Namco's **Ridge Racer V** (formerly **Shin Ridge Racer**) is set for the green light in **March** when the PS2 launches. Added to the usual mix of daylight courses are a few night ones, as well.

Evergrace

Originally planned for release on PlayStation 1, **From Software's** Evergrace has found a new home on PS2. Several games have already made this jump—another being Capcom's feudal action title Oni Mushu. Evergrace is considered a 3D real-time RPG, and is currently set for a **spring** release in Japan. You star as Yuterald, a grown-up Cloud-looking character who carries a big-arse sword on his back. A "dress-up" mode allows you to change what clothes the characters wear.

Sky Surfer

We've seen snowboarding and hoverboarding on video game systems, so what's next? How about the mix of sky diving and snowboarding called Air Boardin', featured in **Idea Factory's** PS2 launch title Sky Surfer? You jump out of a plane and ride your board, performing tricks and rackin' up mad points as you fall. Just don't forget to release your parachute. Sky Surfer makes a crash-landing in Japan in **March**.

International Superstar Soccer

Konami's soccer titles have been around since the 16-Bit days—the PlayStation and N64 versions being the most popular. Now, Konami is taking the good ol' game of football to the next level on PlayStation2. Judging from what we've seen so far, this game will be the most realistic-looking ISS ever and will out eye-candy Sega's Virtua Striker 2. It's so detailed that you can see the individual laces on each player's shoes. As with Konami's previous versions of the game, it will feature all the requisite team and league licenses and stadiums. International Superstar Soccer is set for release around the PS2's Japanese launch in **March**.

Drum Mania

If you're an armchair drummer or wish you could turn that finger tapping into real musical skill, **Konami's** Drum Mania might be for you. A new feature has been added to the game so that three players can play at the same time—one on the drums and two on guitar (like the hook-up at the arcade machine has with Guitar Freaks) on the same screen. This is one of the PS2's launch titles for **March**.

History of the GUSTAVE Empire

The story of the GUSTAVE Empire belongs to a time when the people used the magical power called "Anima" to conjure mighty spells.

The Kingdom of Finney was ruled by Gustave XII. Gustave XII was attacking the Marquis of Otto when GUSTAVE XIII was born to himself and his wife, SOPHIE DE NOHL. Gustave XIII was destined to be the heir of the throne. He would later have a brother named PHILIPPE and a sister named MARIE.

Fig. 14: The Royal Family Gustave

When Gustave XIII turned seven, he participated in the FIREBRAND CEREMONY in which he was to prove his worth to become the heir of the throne. During that ceremony, Gustave XIII found that he had not the power "Anima." Because of his inability to use Anima, Gustave XIII, along with his mother Sophie, were exiled from the Kingdom by the King Philippe and Marie would never see their mother again. Philippe was terribly saddened by the loss of his mother and blamed Gustave XIII for this. While he still had the pride of Royalty, Gustave XIII became a target of contempt resulting in his twisted personality.

When Gustave XIII turned 19, his mother Sophie passed away. Gustave XIII attacked and seized the DUKEDOM OF WIDE upon turning 20.

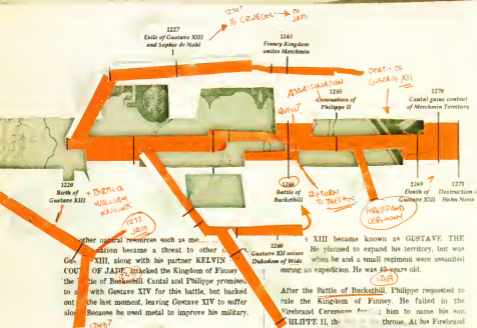

Fig. 15: Gustave XIII (the younger) age 15

After he exiled his wife and child, Gustave XII remarried and had another son. He named the newborn GUSTAVE XIV who would eventually become the King of Finney after Gustave XII died.

Philippe became the Marquis of Nohl after Sophie passed away. Marie was forced to marry CANTAL, the new Marquis of Otto, for political reasons. Gustave XII seized one-half of the Otto territory in return.

Gustave XIII became the hero of those who did not have Anima. Instead of relying on the power of magic, he and his partners developed skills to use machines.

STRATUSFACTION GUARANTEED™

WWF SmackDown

Publisher: THQ
Developer: Yuke's
Players: 1-4
Genre: Action
% Done: 65%
Release: March 2000
Age Gr.: None
Web Address: www.thq.com

The Best: The story line stuff is gonna make you feel like part of the wonderful world of wrestling.

The Bad: Create-a-player is still sab-par.

And The Baby: These are WWF wrestlers. They're all fup.

The backstage areas (five of 'em, see above and left) aren't random like they are in *Mayhem*. You can decide where to go.

STORY LINE

Choose Your Own Adventure

SmackDown's one-player game is a notch above the rest. All sorts of stuff can happen during a season:

- Wrestlers can approach you to join their groups. Your decisions will determine whether you're a "good" or "bad" guy.
- You may get attacked in the backstage areas, before you even enter the ring.
- Vince McMahon might come out and assign a special referee to one of your matches. This may be a friend or foe, depending on your relationship with McMahon!

PlayStation folks always got the crappy end of the stick when it came to THQ wrestling games. Nitro? Thunder? No thanks. Give us *Revenge* or *Wrestlemania* any day. But now, with Yuke's (they're famous for their Touken Retsuden wrestling series in Japan) on PS development duties for THQ, you may forget all about the word "Acclaim."

First, let's talk about how the game looks. The venues look great and are incredibly detailed. You can almost see into the far, beer-drenched corners of the stadiums. You'll notice other nice little touches, like the multiple shadows from the arena lights to how realistically the ropes react as 260-pound men bounce around the mat. The character models themselves are pretty decent; they're smoothly animated. The collision detection, one of the biggest problems with today's wrestling games, also seems to be fairly accurate at this point of development.

SmackDown belongs to the "simple gameplay" school of thought. In other words, you won't have to memorize any joystick combinations like you have to for *Nitro*, *Thunder*, *War Zone* or *Attitude*. It's just a simple button press and an up, down, right or left for most of your moves. In those regards, SmackDown plays more like *Mayhem* or *Wrestlemania* than anything, which is a good thing if you just want to jump right into the ring and start

pliledriving with any of the game's 35 characters.

THQ and Yuke's made extra sure to not only deliver a solid game engine, but a truly satisfying wrestling experience as well. Story line (the only reason why this "sport" is so damn popular) plays a big part in SmackDown (see sidebar for more details). You can also play in special referee matches (as seen on television). These guest officials may help or hinder you, if you have an extra controller, you can even play as the ref!

From what we've seen so far, SmackDown is better than all competing products on the PlayStation, except in a couple of areas. First, the game doesn't move as fast as *Mayhem* does (perhaps that title's best quality). Second, the create-a-wrestler bit still isn't up to Acclaim's standards. "This create-a-wrestler mode will be deeper than *Wrestlemania*," says Sanders Keel, producer on WWF SmackDown. "But we wanted to concentrate on the one-player game, the moves and the realism, not a create-a-wrestler mode that will let you make big and goofy clowns." Wait a minute. Aren't all pro wrestlers, in essence, big and goofy clowns?

If you still like wrestling games, you will not be disappointed when SmackDown arrives this March. It plays very well and has raised the bar for the genre with a very involving one-player experience. From what we've seen so far, this will be the ultimate wrestling title for the PlayStation. 🐼

Which of the following future Namco titles are you most excited about?

Dragon Valor

- Publisher:** Namco
- Developer:** Namco
- Players:** 1
- Genre:** Action/RPG
- % Done:** 63%
- Release:** May 2000
- Also On:** None
- Web Address:** www.namco.com
- The Good:** A wide variety of physical and magic attacks.
- The Bad:** The dungeon's monster population is lacking.
- And The Ughs:** It won't take long for the music to get on your nerves.

In order to make it through the dungeons, you'll have to solve these mind-bending "push block over switch" puzzles.

Yes, *Dragon Valor* does indeed have quiet, fearsome dragons.

USEFUL TOOLS

Magic Man

There are oodles of spells at your disposal.

With all the attention Namco's fighting games have been getting recently, one might forget the fact that they actually make games other than fighters and racers. A far cry from *Soul Calibur*, the upcoming *Dragon Valor* is reminiscent of Square's 1998 action-RPG *Brave Fencer Musashiden*.

The branching story line tells the tale of Clovis, a man on a quest to avenge the loss of his sister and hometown to Rage, the dragon. For the duration of the first chapter, you assume the role of Clovis. Depending on your actions here, you'll meet up with one of two women. After this chapter, you control your son (whose name depends on who you marry), who was the result of the aforementioned meeting. The abilities of your son as well as the dragons you

encounter during the game depend on how well you performed as Clovis.

The basic gameplay can be best described as a combination of *Brave Fencer Musashiden* and *Zelda 64*. Within the many dungeons are puzzles that must be solved in order to progress. Most of these puzzles are fairly simple and involve moving large blocks over switches to open gates. Clovis and Clovis, Jr. have a variety of physical sword attacks, including a three-hit combo, a dashing thrust and a Zelda-esque charged swirl attack.

Upon defeating boss characters, you acquire colored books granting you eight different forms of magic: heal, fire, thunder, ice, defense, stealth, vortex and mine. When enemies expire, they leave behind money called Val. You can use the Val you collect to purchase and sell items, MP or HP in various shops throughout the game.

The biggest difficulty gamers will have to overcome is the camera system. While not a completely static camera, you can't control the angle at which you view the action. This could lead to missing important power-ups and Val or being unable to see an incoming enemy attack (missing platforms and plunging into the lava below is also a bit frustrating). *Dragon Valor* has already been released in Japan, and is set for a May release in the U.S. If you've been looking for a *Zelda*-type game on the PS and weren't satisfied with *Legacy of Kain*, *Dragon Valor* may be worth checking out.

Colony Wars: Red Sun

Publisher: Psygnosis
Developer: Psygnosis - Leeds
Players: 1
Genre: Action
% Done: 70%
Release: March 2000
Web Address: www.psygnosis.com
The Good: Finally, you can save after every mission.

The Bad: Graphics during planetside levels are a wee sluggish.

And The Ugly: The pile of busted PlayStation joypads left behind after Crispin Smith reviewing the frustratingly tough Colony Wars: Vengeance last year.

Although most of the missions are still set in space, the new team at Leeds sped up the terrain engine.

So, Red Sun packs more planetside sorties than Vengeance—about 14 in all. Of course, things blow up real nice in both environments.

MISSION STRUCTURE

Your Choice

Unlike in previous games, your character in Red Sun works for nobody but himself. And the nice thing about self employment is you can pick which missions you want to fly. The game is divided into five solar systems, each of which offers a variety of contract missions. Choose the ones you want, complete them and you'll earn money you can spend on new ships, weapons or performance-boosting gadgets. Note that some missions have the letter P next to them. These stages must be completed to advance the story and trigger new FMVs. Every world has a certain number of P missions you'll need to clear to move on to the next planet and its new levels.

Don't feel like a wuss if you thought Colony Wars: Vengeance was a little too hard and a lot too frustrating. Even the Psygnosis team working on its sequel, Colony Wars: Red Sun, found the game a tad trying. Good news, though: They're fixing the one thing that made the first two games such a pain in the pants. "A lot of people complained that you couldn't save after every mission in Vengeance," Psygnosis game designer Mark Green told us. "So we've changed that in Red Sun. And if you fail a mission now, no problem, because most missions are just contracts you choose, and failing them has no effect on the overall story line. You just don't get paid."

But we're getting ahead of ourselves here. Red Sun is set during the same war-torn time frame as Vengeance. You play a pilot named Valdemar, who lives on the ass-end of the galaxy, far from the froces between the Navy and the League. Valdemar is a mercenary and scoundrel; he'd probably make a good bowling buddy for Han Solo. But ominous dreams plague your character. He feels driven to investigate a silverfish-shaped ship called the Red Sun—a craft somehow tied to the fate of the galaxy.

Psygnosis, wanting to give the series a fresh spin,

assigned development of the game to a new team at its Leeds Studio. Now, Red Sun features an impressive score performed by a live orchestra. The developers have also taken Vengeance's code and tweaked it—especially the ground-based missions, which look better despite some choppieness. Overall, Red Sun still pretty much looks the same as Vengeance, but that's OK, because it's the gameplay that's been overhauled. "This game maintains the same speed and frame-rate as Vengeance," Green said, "but the ships are slightly slower, so you get more shots on enemies and feel more like you're in a dogfight. Plus we've added more turbines on the big ships and they all animate and track you rather quickly, so you have to make proper strafing runs now." Many weapons now damage both the shields and hull of enemy ships, so you're not forced to switch between guns if you've equipped the right hardware.

The big improvement to Red Sun is its new mission structure. Instead of dumping you down a branching path of missions like in the previous games, Red Sun lets you choose your sorties (see sidebar). And mission variety looks one again to be the best thing here. One level has you blasting weaponry off dinosaurs (although you can't shoot the creatures themselves, since they're a protected species). You'll even go on missions through subspace, a region similar to hyperspace in Babylon 5. Sounds to us like a wild ride. ☘

Like its predecessors, Red Sun packs clever missions. The stage seen at left has you tailgating cargo to fool enemy security scans.

SaGa Frontier 2

Publisher: Square EA
Developer: Square
Players: 1
Genre: RPG
% Done: 90%
Release: February 2000
Also On: None
Web Address: www.squareoft.com

The Good: The hand-drawn graphics are simply beautiful.

The Bad: It'll take you months to fully explore every possible scenario path. Got some free time?

And The Help: If you want ugly, go play the original SaGa Frontier. Bleah! What a disaster...

The most noticeable improvement in SaGa Frontier 2 over the previous SF game is in the graphics department. SaGa 2's beautiful hand-drawn graphics make the ugly prerendered backgrounds of the original look archaic by comparison. Fortunately, that's not the only area that has been improved. The gameplay is much tighter and more enjoyable this time as well.

FIGHT STYLES

Pick A Fight

From top to bottom, the three different styles of battle you can choose from in SaGa Frontier 2: Team, Duel and Strategic. Each has its own unique style.

Those of you who were disappointed by the original SaGa Frontier, with its confusing story lines, drab graphics and boring gameplay will be happy to know that Square has gone back to the drawing board for its sequel. The result is an entirely new game that bares almost no similarities to its predecessor other than its battle system and the fact that it shares the SaGa Frontier name.

SaGa Frontier 2 is definitely one of the more original RPGs we've seen. For starters, the entire game is hand-drawn, providing a distinct look and feel unlike any other game before it. The graphics are absolutely beautiful. The way the game progresses is unique as well; you advance through the story via dozens of "Events," or chapters in one huge history book. These Events vary in size and scope (some are merely story-based and last two minutes, while others involve lots of gameplay and last over a half hour), and as you progress through

the game, the paths that you choose will determine which characters you meet up with and ultimately, how the story ends.

SaGa Frontier 2 offers three different types of battles—Team (your typical RPG party vs. party battle), Duel (a one-on-one fight with more specific attack commands and combos) and Strategic (a very cool army vs. army battle that plays out like a cross between Final Fantasy Tactics and Ogre Battle). Before most battles you can choose between Team and Duel; the Strategic battles come at set points in the game. Building your characters through battle is a bit different than in most RPGs. Rather than gaining experience, stats go up individually after each battle. Special attacks are learned through repeated weapon use, and weapons will expire over time. By combining Weapon Arts (weapon-based skills) with Spell Arts (magic-based skills), up to four party members can participate in combo attacks that do devastating damage. Needless to say, the battle system is pretty in-depth. More importantly, it's a lot of fun.

RPG fans will no doubt want to keep a close eye on SaGa Frontier 2. While it may not leave you awestruck the way Final Fantasy VIII did, its vivid graphics, interesting story and solid gameplay should provide enough satisfaction for even the most jaded RPGer. Look for it in stores this February, and check back next issue for our reviews.

The various Events that you can choose from are selected from regional maps that make up the world of SaGa Frontier 2.

Syphon Filter 2

No one expected the original Syphon Filter to be as spectacularly popular as it turned out to be, but **989 Studios** was so pleased with selling more than a million copies, that they've been rushing to bring a new game out as soon as possible. Currently scheduled for a **March** release, this could well be the first mega-hit for PlayStation in 2000.

So what's different this time? Well, Gabe's been given a huge new arsenal of goodies to play around with—plus he can jump now, an ability that was oddly missing from the original game. Two-player support has been added, and there are 15 different arenas that you can run around and blow up a buddy in. Gabe's partner, Lian Xiang, is now a playable character, and you get to play as her in eight of the 20 levels that come on this two-disc set.

Street Fighter EX 2 Plus

It took awhile, but **Capcom** is finally bringing the sequel to one of 1997's best fighting games home. Street Fighter EX 2 Plus is not only a ridiculously long title, but a product of Street Fighter alumni and former programmer, **Arika**. The sequel introduces characters like Blanka to the world of 3D for the first time. Already released in Japan, SF EX 2 Plus is being readied to ship in the **first quarter of 2000** in the U.S.

Street Sk8ter 2

Forget snow—we want land-based extreme sports! The sequel to the entertaining skateboarding original is coming from **Electronic Arts** and **Micro Cabin**. While this installment in the series provides a number of impressive new skaters, boards, tricks, tracks and modes (including a four-player turn-by-turn mode), the create-a-skatepark mode will most likely be the game's most winning feature. Look for it in **March**.

Colin McRae Rally

It was an odd choice for **SCEA** to release this one. **Codemasters'** rally game has been around for some considerable time in Europe—so long in fact that young Colin has switched teams from Subaru (as featured here) to the new Ford Focus team—making this game out of date. Still, it's an excellent rally sim, and has received rave reviews around the world. Watch out for this one in **February**.

Marvel vs. Capcom

Capcom's third Versus game is due to arrive on the PlayStation in **January**. Like with the previous two chapters, you won't have full tag-team capabilities here. But for this installment, you will have a choice of Partner Heroes Mode (you pick a normal partner for nothing but tag-team attacks and counters, without the actual "tag teaming") or Special Heroes Mode (you get a run-in, "guest" partner only). Only the Crossover Mode will allow tag teaming AND run-in partners, but both players must have the same two primary characters. Oh, and the neat super cancels are back as well (where you can cancel one combo to link in another).

Needless to say, pick up the DC version if you want the full, unhacked MyC experience.

Team Buddies

Here's an odd little game in which you lead an army of weeble-shaped "buddies" on an attack mission against other unfriendly buddies. You build up your forces by arranging blocks on a grid. Yeah, it's really weird but it's one of those unique niche games that might just work. Think Bomberman meets Lemmings spiced up with a little combat action as well. Two-player is the best way to play this cartoon-inspired game. **Psygnosis** will release Team Buddies in **March 2000**.

Need For Speed: No Limits

Wow, lots of new stuff in this one: Over 50 vehicles, 4-player multi-tap compatibility, five countries with around 40 tracks, and more. Play Modes include a mission-based challenge in which points are awarded for achieving a lengthy set of driving skills. An in depth Career Mode is on tap as well. Look for this **Eden**-developed, EA title come **spring**.

Jojo's Bizarre Adventure

Capcom's CPS III 2D fighter, based on the popular Japanese anime and manga series, comes home to the PlayStation this winter in top-notch form. While not as loaded as the Dreamcast version, Jojo for the PlayStation is a better port than anyone thought it could be—it also includes a new story mode and characters from the two Jojo arcade games. This is set for a **February** release.

Old flames die out, but I can always make new ones.

Romance of the Three Kingdoms VI

Open your **Koel** Chinese history books to chapter VI of the RTK series, subtitled Awakening of the Dragon. This one- to eight-player PlayStation-exclusive historical war sim has new military units, an improved battle system and a mix of full-length and short missions. Koel also promises some sweet PS2 Kessen video footage on the final RTK VI disc, due out in **February**.

MediEvil 2

SCEE's (Sony Computer Entertainment Europe) surprise hit *MediEvil* was tremendously well-received when it was released over a year ago, so it's little surprise that a sequel has been in the works ever since. Again using a unique visual style somewhat similar to Tim Burton's *Nightmare Before Christmas* this vast 3D platform/adventure hybrid should be with us in American stores sometime in the **first quarter 2000**. If you've not played the original, think *Ghosts & Goblins* in 3D.

Kamurai

Namco follows the release of *Dragon Valor* with *Kamurai*, a 3D turn-based RPG. There are six gods who live in the realm of the sky, and like the immortal myths of the Greeks, they protect and meddle in human affairs. New RPG aspects include the Mind and Will and script-zapping systems. The Mind and Will system affects how efficient your characters follow instructions in combat; a weak will may turn the tide of battle. The zapping allows players to uncover two simultaneous plots—one as a human, the other as a god. Namco has already dubbed *Kamurai* their "God RPG," and it'll be interesting see how this may influence other games. Character designs in the game were done by Haruhiko Mikimoto, best known for his work on *Macross*, *Gunbusters* and *Gundam 0080*. *Kamurai* will be out sometime in **2000**.

Fun! Fun! Pingu

Fun! Fun! Pingu, from **Sony Music Entertainment**, is our official cute game of the month. You play as a penguin who has to cope with life in the Antarctic. The game is divided into chapters, each with a handful of daily tasks that Pingu must complete. These tasks range from the mundane (fishing for food, going to class) to the absurd and silly (jump up and down on a couch). PocketStation support that allows you to take your penguin on the road. Fun! Fun! Pingu is out **now** in Japan.

Parasite Eve II

Here are more screenshots from Parasite Eve II, **Square's** sequel to their popular "cinematic RPG." Aya, having been deemed the biohazard whiz kid, has been assigned to M.I.S.T. (Mitochondria Investigation and Suppression Team). Enemies in Parasite Eve II will be smarter, and use environments to their advantage during combat. Square plans to release Parasite Eve II on **Dec. 26** in Japan. God bless the ring.

Jet de Go!

Jet de Go! is the latest "driving simulation" in Taito's Go! series. In Japan, the popularity of the Go! games rival that of Lara Croft. Taito's original driving simulation was Densha de Go!, a game that put you in the role of an electric train conductor. Jet de Go! will have similar criteria and goals as the previous Go! games as you fly your commercial airline and meet landing schedules. Jet de Go! will also come optionally packaged with a special controller for 6800 yen. Look for it in **February**.

Pokémon Gold/Silver

 Fall 2000 (U.S.)

The Word: One hundred new Pokémon, new art, better battle system, real-time, more strategy!

The Aim: Waiting almost a year for the U.S. versions to be released.

And the Glory: The frenzy for Pokémon games will never stop. At least not until after this game.

NEW BEGINNINGS

Pokéwho?

Dr. Utsugi gives you a choice between three new Pokémon at the start of the game. Here they are:

Hinoarashi
 #155
 Fire type
 Height: .5m
 Weight: 7.9kg

With a flame mohawk shooting from his back, this lil' guy is one tough Poké!

Wainoko
 #158
 Water type
 Height: .6m
 Weight: 9.5kg

A small alligator who evolves into a mighty, Godzilla-like monster.

Chikorita
 #152
 Plant type
 Height: .9m
 Weight: 6.4kg

A plant-type Pokémon with a leaf growing from his forehead.

The evolved form of Onix versus Wainoko's third form (far left). Entering a gym (top), Pikachu fans (bottom left), and Mareep vs. Ladyba (right).

Color? Yes, but there's a lot more new in Pokémon Gold and Silver. This is the true sequel to the original Pocket Monsters game which debuted in Japan five years ago. *Note: Names and places used in this preview are from the Japanese version of the game and will likely change when it is released in the U.S.*

You begin your journey in Wakaba Town, where you say goodbye to your mother and grab one of three Pokémon from Dr. Utsugi (see sidebar for the descriptions of the three).

There are a total of 251 Pokémon in the new games—151 from the first, and 100 new. Some of these are pre-evolved forms of popular monsters like

Pikachu, Electabuzz and Clefairy. Get a male and a female of those and take them to a farming couple which breeds Pokémon and you'll get an egg about a half hour later (see sidebar). Eevee can evolve into two additional forms—a psychic Eevee and a dark Eevee. Gold and Silver have two new types of Pokémon—Dark and Steel, in addition to later evolutions of some monsters like Onix and Slowbro. Special versions of different monsters will turn up during the game too, and you'll only have one chance to catch them (for instance, the Gyarados who's terrorizing a lake area is gold-colored, different from normal). There are artwork differences between Gold and Silver—some Pokémon have different poses depending on which version you're playing. Like the previous versions there are monsters only available in one cart or the other.

The Pokégear is possibly the handiest gadget in the game next to the backpack. With the Pokégear you can check the time, look at an overworld map, make and receive cellular phone calls and listen to the radio, among other things. Keeping track of time

REAL-TIME

Time passes in the game just as it does in real life. Different Pokémon appear in the morning, day and night. Catch 'em all 24 hours a day!

Is important as some monsters only appear during certain times of the day. Radio stations vary from Professor Oak's Pokémon Channel (which gives you locations of the monsters in the game), a music channel and the Lucky Channel. The Lucky Channel gives out lucky numbers each day and if yours match the ones at the radio tower you can win prizes (what they are you'll have to find out for yourself!). If you exchange phone numbers with other trainers you fought in the game, they'll call you for rematches.

Remember in the first game that if you wanted to use Cut or Surf you'd have to go into the Pokémon menu and select it? Now all you have to do is move toward the area where you'd use it and press A. It automatically chooses the correct move from whichever Pokémon has learned it. You can equip monsters with items, too, like various kinds of fruit (which will heal your Pokémon during battle). When its health is low or its status changes, it will use the

item and regain its health automatically.

If you are an owner of the Game Boy Printer, you can print out your Pokémon data. There's also a Pokémon photographer who'll ask you if you want a special picture of one of your monsters (remember Todd from the Pokémon TV show—he's in here, too). You can print out the picture of your Pokémon and stick it anywhere you like.

Trading Pokémon with the previous versions of the game is a bit tough, but you can do it. You need to have only Pokémon from the first game in your active party when you activate the Time Capsule—which is under repair at first until about halfway through the game. The Time Capsule, Vs. Room and Trade Center are located on a new second floor of each Pokémon Center.

Nintendo's sequel is every bit as good as the first game and better in many ways. So Pokémon fans have a reason to be excited for fall 2000. It just can't come soon enough. 🐾

IF THEY MATED

New to Gold and Silver are male and female types of each Pokémon. Some of these can breed and produce an egg which will hatch into their pre-evolved form. For instance, get two Pikachu together, leave them at the farm, and in about a half hour you'll have an egg which hatches into Pichu. Isn't he just the cutest thing?

LOTSAS NEW

Make it Better

Game Freak has added a lot of things which make the Pokémon experience better. Here are just a few examples of what you'll find along the way:

The slot machines in Kogane provide a worthy distraction for the would-be Pokémon master.

An overworld map is right on your Pokégear so you don't have to carry it as an item.

A backpack makes carrying and sorting items a breeze. There's a pocket for Pokéballs, HMs and TMs, Misc. items, and important items. Makes finding things very, very simple.

EXPANDING

Put Up Your Dex!

TURTLE RECEIVED A BOOSTER PACK (MSTC)

Just like in the real Pokémon trading card game, you can get special expansion decks which add to your starter deck and contain special monsters and items that you can use during battle. Of course, it pays to arrange your deck the way you like it.

While most gamers are already familiar with the Game Boy titles, there's another Pokémon game doing big business.

It's the Pokémon Collectible Card Game created as an off-shoot of the original RPG. Wizards of the Coast produces the U.S. version and the card game is almost as popular as the video game!

But if you're a gamer at heart and would rather deal with a stylized version of your favorite monsters, then this is for you. Like the Game Boy game, you travel around to different Gyms, challenging the leaders for badges to get into the Pokémon League. Along the way you battle other trainers and gain new monsters and other items

which will be useful in your quest. And in true Pokémon style, you have a rival who pops up every so often to tell you how much you stink.

Rules are exactly the same as the trading card game played on card tables regularly across America. You begin by shuffling your deck and drawing seven cards. From that, you pick the Pokémon you're going to battle with (or, if you don't have any Pokémon in your hand, re-shuffle) and equip them with energy. Attacks require different types and amounts of energy (you'll need energy cards in your deck). During battle you can level up your monster, but then you will have to equip even more energy before you can attack. After defeating an opponent's monster, you pick up prizes, which were laid down before battle began. Depending on how difficult a battle is, there can be multiple prizes—special cards or expansion packs. Using the link cable you can battle a friend and trade cards. This is a lot more focused on battle and strategy—without some of the RPG style play of the regular game—which some fans might not enjoy as much.

48 The number of pixels tall Lara Croft's sprite will be in her new Game Boy Color adventure (most GBC titles have a 16- to 32-pixel-tall character).

Metal Gear: Ghost Babel

Everyone's favorite black ops badass is back, exclusively for the GBC. While it shouldn't be considered a true sequel to *Metal Gear Solid*, it does take place three years after Solid Snake's last encounter with FoxHound; think of it as a side story to MGS. This time around, Snake, with the help of Chris Jenna (a support character, like Meryl from MGS), must venture into the jungle to infiltrate an installation occupied by the Black Chamber. Konami has not stated a release date yet for *Ghost Babel*.

Tomb Raider

Core Design is using every trick in the book to cram Ms. Croft into this 2D side-scrolling title. The game will supposedly pack parallax scrolling, speech and even some FMV. Lara's character will be twice the size of normal GBC sprites. Core also claims Lara will have 2,000 frames of animation. Otherwise, the game promises to deliver the huge levels and rigid control setup of the 3D incarnations. Lara will still slide down steep inclines. She'll still have to dodge spikes, swinging blades and other traps. She'll encounter the same types of push-block and lever-based puzzles (expect the game to play much like *Prince of Persia* or *Flashback*). The quest this time takes Lara to South America in search of an artifact called the Dream Stone, which supposedly grants god-like powers. Publisher **Eidos** will release the game in **March**.

Bionic Commando: Elite Forces

BC: *Elite Forces*, from **Nintendo** and **NST**, is a remake of the NES classic with all-new levels (22 in all), enhanced graphics (super animation!) and the ability to play as a guy or a girl. Watch for it in **January**.

Crystalis

This **March**, **Nintendo** will be releasing a Game Boy Color remake of **SNK's** classic NES RPG, *Crystalis*. In addition to enhanced graphics and better control, the GBC version (developed by **NST**) will sport some new gameplay elements (such as the ability to wield the *Crystalis* after assembling it).

Sonic Pocket Adventure

Sonic's back in rare two-dimensional form on the Neo-Geo Pocket Color. *Pocket Adventure* (available now) is loosely based on *Sonic 2* for the Genesis. Developed by Sega/Sonic Team and published by SNK, this is as close as you're going to get to playing a new Sonic on the go. It contains levels that look much like those in *Sonic 2*; only the design itself is different. For instance, there are new loops which take you straight up and around instead of the usual circle and corkscrew (trust us—it's cool). And it's every bit as fast as its 16-bit parents.

There are a total of six areas—Neo South Island (based on the Green Hill Zone), Secret Plant, Cosmic Casino, Aquatic Relix, Sky Chase and Aero Base. You can go back to levels you've completed from the beginning of the game. Along the way you'll face bosses like Robotnik, Knuckles (who didn't appear in the series until number three) and Mecha Sonic.

In addition to the regular game, you can link up with a friend and race for time, go through each course for the fastest time by yourself, or assemble photos of the characters from the series in a puzzle mode (collect puzzle pieces throughout the game's Story Mode to use here). It's great to see Sonic back on a portable, and on one like the NGPC.

Cardfighter's Clash: SNK vs. Capcom

Besides the various fighting games on various platforms, the SNK vs. Capcom war is also being fought on the card-playing table. *Cardfighter's Clash* is a trading-card game that comes in two flavors: an SNK version which comes with a starter deck of 50 cards starring popular (and unpopular) SNK characters, like King or the Bogard brothers. The Capcom game contains a starter deck full of several Capcom personalities, from RE's Leon to Blanka. Each cart, however, contains computer opponents that can give you (if you win trading card battles) cards from either faction. Your goal is to eventually collect an album of all 300 cards, Pokémon-style. Naturally, you can fight or trade with other players via the link cable.

SNK is publishing the two carts, and they should be out in stores now.

SNK vs. Capcom: The Match Of The Millennium

This is possibly the best fighter on any handheld system ever. MOTM pits some of the most popular characters from both sides of the 2D fight club. Highlights of the game include an amazing amount of animation per character, as well as accurate music themes reproduced from each of the game's stages. When you play through MOTM in single-player mode, certain characters will react to one another if they're lined up within their story lines. The game features a special "tag" feature that allows you to tag in your partners during the fight. So if the *Cardfighter's Clash* version of SNK vs. Capcom isn't your cup of tea, definitely check out MOTM. Besides, it's all you've got until the Naomi version comes out from Capcom sometime this year. MOTM from SNK is out now.

Gunbullet Fever

Crisis Zone is ultra-hardcore and viscerally realistic. On the other end of the spectrum is **Namco's** Gunbullet series, now running into its third installment. Better known in America as Point Blank, these shooting gallery titles tend to emphasize gameplay (i.e., fast reflexes and puzzle-solving logic) over flashy graphics. With Gunbullet Fever, Namco's Bert and Ernie wannabes return in more of the same twitchy mini-shooters. No word on a U.S. or PlayStation release as of yet.

Keyboard Mania

Can't play the keyboard? That's OK, because with **Konami's** Keyboard Mania you'll be playin' like a regular Mozart. All you have to do is hit the right keys on the 24-key Casio keyboard as the on-screen commands fall from the top of the screen to the bottom. The game features songs in several different musical styles, from Pop to Classical, and it hits Japanese arcades in **January**. It probably won't be long before it comes to PlayStation, too.

Virtua NBA

Sega's latest Naomi sports title, Virtua NBA, looks suspiciously like Visual Concept's recently released NBA 2K on the Dreamcast. While the game is dipping with NBA licensing, it only features five prominent players per team. During gameplay, the action locks into one perspective; this gives the game a very Showtime-esque look, albeit with much more detail. Virtua NBA is out in arcades **now**.

Jumping Groove

Namco's Jumping Groove seems to take a more minimalist approach to dance games, concentrating more on a physical rather than cerebral workout. You hold on to the bars and jump over the lights which scroll down to the beat of the music. Light sensors on the floor pads will let the game know if you've screwed up. Though the game tested at Wonder Park, Namco has no plans to bring Jumping Groove over to the U.S.

NEW Player Graphics

CRAZY TAXI™

Chances are, the new video-gaming love in your life is the Dreamcast. After smashing expectations way before Christmas, Sega's new system went on to have an impressive holiday season. Well over a million of you are now enjoying Sega's success...but what game should you watch for next? Sega's impressive Naomi-based arcade game Crazy Taxi has been high on many people's wish list for some time, and in early February you'll be able to have an arcade-perfect conversion—with lots of extras—in your living room for several thousand dollars less than investing in an arcade unit. If you're really into the idea of the game, though, you could enter our competition on page 150 and try to win an arcade machine all of your own.

Photography by Michael Sexton

Simple is effective. If there's one thing that all the most successful arcade games have in common, then this is probably it. Keep the premise light, the action high and make it all look as pretty as possible. And if you can, throw in a suitable soundtrack to get people's toes a tappin'.

Crazy Taxi is one of those games that makes you wonder, "Why didn't anyone do something like this before?" Originally released in Japan about 28 months ago and then over here about six months later, the game has been a solid, steady success story. While never a "fad" or something that was acknowledged as being the latest, greatest thing, Crazy Taxi has proved to be an ongoing success for Sega, and its creators at Sega Software R&D Dept. #3. The producer on the project, Kenji Kanno, tells us "it was never a huge hit for Sega, but it has been responsible for getting a different kind of player into the arcades. It's proven very popular with people who maybe wouldn't usually try something like this."

"It was a hit with gamers too," Kanno continues, "but it was people who wanted to try something different who really went for it."

So what's it about then? Chances are there are a lot of you who haven't had the opportunity to try it out, and from the screenshots that have been popping up in magazines and on the Web you could be fooled into thinking that it was just

"It was never a huge hit for Sega, but it has been responsible for getting a different kind of player into the arcades." - Kenji Kanno

another racing game—not exactly what the Dreamcast really needs. "Originally I didn't intend this to be a game about taxis," Kanno tells us. "I'd been working on the idea for some kind of chase game for a while, and I wanted to have people racing around a big city...but not in a race. The idea for the taxi cabs came much later."

Choosing one of four characters, you begin the game with nothing but a cool-looking convertible cab and a clock ticking away valuable time. The goal? Find people to give rides to so you can earn more time, and more importantly—money. Set in San Francisco, the original arcade game is only loosely based on the real place. It's full of hills, cable cars and the occasional landmark, but it's far from accurate in the way that something like, say, Metropolis Street Racer will be. "We didn't want to waste time and effort being accurate with maps and things," Kanno explains. "I was more interested in capturing the fun feel of the city and the West Coast in general. If we'd have gone for accuracy, we would have had to sacrifice gameplay, which wouldn't have been appropriate for a game like this."

As soon as the game begins, you accelerate away and look for a potential

customer. Pull up next to them, let them jump in the cab and tell you where they want to go...and you're off. You have a limited time to get them to their destination, and you are rated in how quickly you get them there. Fortunately you don't have to follow the rules of the road, and smashing through parks, street cafés, around the inside of shopping malls

MY 2 CENTS

When you first start playing you're obviously blown away by the graphics and the level of detail. Then you start to appreciate just how exciting it is...and then after a while it dawns on you just how simple a game it is...but that's the thing. We played the early version Sega gave us for hours and hours and found that trying to make as much money as possible was just as exciting as anything that the more convoluted racing games provide. This is real old-school pass the joypad back and forth competitive stuff. It doesn't matter that there isn't a multiplayer mode, and it doesn't matter that there's nothing much to open up...the experience of playing the thing is rewarding enough. People are going to want to buy this the second they see it in stores; it'll be a huge hit for Sega.

—John Davison

and anything else that constitutes as a shortcut is perfectly acceptable. Driving like a maniac is perfectly fine—in fact, it's encouraged—and if you get really good at it (by narrowly missing collisions) your customer will increase his or her tip based on how exciting the ride was. Imagine the best chase scene you can think of in a movie, with as many flying boxes and scared pedestrians as possible, and you're pretty much there. Throw in the cool scenes from *Built!* where the cars leap down the hills in San Francisco, and you'll have a good idea of the kind of feel that Kanno and his team are going for. Once

MY 2 CENTS

The perfect arcade experience at home. For those of us who don't have time to get muddled down in long FMV intros and complicated plots, this game gives you immediate gratification. The "shortest distance between two points" axiom definitely applies here as you can furiously blast through parks, cafés, shopping malls in a huge, ultra-realistic environment with plenty of recognizable landmarks. Next stop, the fountain in front of Pizza Hut.

—Cyril Wochok

you've got all that in your head, just add in the fact that in this game you're getting paid too.

Once you've delivered your customer to the desired destination, you need to speed away and find someone else so that you don't run out of time. And that's it. It's really simple and open-ended. It's almost an old-fashioned game where you're competing for time and points. There's no convoluted "goal" to the thing, there's no final boss or showdown, and there's no location that you ultimately need to reach. You just need to get as much money as possible by being as quick and efficient as you can.

The city map itself is absolutely huge, and as you work your way through the game you'll soon learn the location of many of the key destinations. Fortunately things are made easier by the fact that there are lots of licensed real-world places for you to go, so it's easier to remember. Customers will demand rides to The Original Levi's Store, KFC, Pizza Hut, Tower Records and the Fila Store as well as landmarks such as the Millennium Tower, various train stations, a heliport, a Chinese restaurant, the baseball stadium, a church and a long list of others. When you first play you'll spend all your time following the arrow at the top of the screen that helpfully points you in the direction you need to go. As you become more proficient though, you'll be busting your way through parking lots, side streets and train tunnels because you know the quickest route to where you need to go.

As we said, it's very old-fashioned in concept and as such, the driving force behind playing the thing is just being better than you were the last time you played. These days it's not often that this old-school feeling of competitive spirit is dished up with a video game, and as we played the early version we have in the EGM offices, people became hooked,

desperately trying to make more and more money.

To make sure things don't get old too quick Kanno and his team have added some extra features to the basic arcade game code. Most significant is the new city map that appears in the options as the "Original" mode. "It's not really a whole new city," he tells us, "but we took all of the graphics code and textures and applied them to a completely different map." This in effect doubles the size of the game and gives you a whole new layout to

learn once you've mastered the arcade game. Second, a bunch of new modes have been added to the game. You can go for the standard arcade rules where you boost your time with each customer, and then there are other modes where you can try to make as much money as you can within a set time limit. This requires a lot of strategy for the more experienced player, as you have to waste as little time as possible and carry the rides that stand to make you the most money in the shortest possible time. Finally, there are mini-games that can be played to help you build some of the specific skills required to be a really good player. "We added this

to help people out," Kanno explains. "For example, we have a mini-game that looks like a giant ski jump that is designed to help people master the Crazy Dash [a kind of turbo boost], while other games have you chasing around an arena trying to burst balloons. This is something that teaches you to turn around quickly and navigate tricky areas." As far as more Dreamcast-specific modes go though, that's it. We quizzed Kanno on extra stuff like multiplayer modes and secret drivers, but the answer came back the same for everything. "Basically we wanted to bring the arcade experience home as accurately as possible," he told us, "plus, we want to

Crazy Taxi is exactly the type of big, showy, overblown arcade game I want to play at home. Everything about this game—from its screaming speeds to its eardrum-pounding soundtrack—will get your blood pumping. I can see myself popping this game into my Dreamcast years from now, anytime I need a quick adrenaline rush. Sure, Crazy Taxi isn't a particularly deep game, and I wish they had stuck in more extras for the home version, but this is definitely the next big game you gotta buy for your Dreamcast.

make sure that we get this game to Dreamcast owners as quickly as we can. We could spend a long time in development building extra stuff, but in the end we decided against it." You may have read elsewhere the Dreamcast version will include extra features and VMU mini-games. This is not the case, as (again) Karno and his team want to finish the project as quickly as they can.

Those of you familiar with the original game will be pleased to hear that all of the licensed properties are intact. The stores and locations we mentioned earlier have all been pulled across from the original, and you'll also be pleased to hear that the cool punk soundtrack is present too.

Tracks from both Bad Religion and The Offspring pump out constantly, and there really couldn't be any music more suited to the fast-paced feel of the game.

As we go to press, the Dreamcast code is well on the way to being finished and should make its February release date with considerable ease. All of the basic modes are finished and Karno and his team are working on making the graphics engine as efficient as possible. The final game will allow you to change the difficulty by increasing the amount of traffic on the roads, and in the version we played this still needed some optimizing to keep the frame-rate up. Otherwise, Crazy Taxi is ready to roll. 🚕

Mini-Games... Learn To Drive Like A Pro

When you first load up Crazy Taxi there are nine mini-games available to you in the Crazy Box section on the Options Screen. These are divided into different sections and are designed to teach you all of the necessary skills to get through the main game as efficiently as possible. Once you've completed all of these nine games, Crazy Taxi Producer Kenji Kanno hinted to us that three more games would open up. "I can only tell you about the first nine," he told us. We spent some considerable time with the game though, and can tell you that completing these nine opens up seven more—giving 16 in total.

The skills that the mini-games teach you are all centered on making you a more proficient driver. The first game (bottom left) is built like a huge ski jump and is designed to teach you to do the Crazy Dash: a quick jiggle of the joypad buttons that boosts you forward briefly and allows you to accelerate out of trouble, or in this case perform a huge jump.

Later (bottom middle) you'll be thrown into an arena with a specific task set within a limited time period. First you'll have to race around and burst 20 balloons before the clock runs out. In the later games you have to pick up passengers and take them to their destination before

the clock runs out—just as you would in the game.

The other skills taught deal with the orientation of your car at key points so you can operate at speed in confined spaces. The mini-game (bottom right) is set on a series of islands and you have to jump from island to island, turning just before you leap so that you land facing the necessary direction without falling into the ocean. It's all tough stuff, but once you've got these things licked, it makes racing through shopping malls and subway stations much easier! Jumping and hitting things wastes valuable time...and this can really help you out.

GEAR UP!

The Best of Power Tools

Here's hoping you got a pile of really good game stuff this Christmas—maybe a Dreamcast, maybe a Game Boy Color, maybe a spiffy new PlayStation to replace the battered one Santa stuffed down your smoke hole two years ago. Of course, the only problem with getting really good game stuff is you'll want even more really good game stuff to go with it. In our business, we call this stuff "peripherals," and you'll find racks of these gizmos up and down the aisles of your favorite vid-game megastore.

But any sap who's blown 20 bucks on a cheapie, squeeze-too-hard-and-it'll-bust joypad knows that a lot of this really good game stuff is neither "really good" nor even just plain "good." So we've emptied our cabinets of every peripheral we've reviewed in our Power Tools section and sorted the best stuff from the junk. Don't blister your paws playing with the dozen available PlayStation racing wheels or mountain of Game Boy screen lamps yourself—our consumer-hardware experts have done all the playtesting for you. Check the following pages to find the only

gear worth getting. Just keep in mind that when it comes to controllers, memory cards and rumble paks, you'll rarely find anything better than the first-party stuff from the console manufacturers themselves. Heck, some of the worst third-party gear will barely snap into your system's controller ports. But if you're looking for a cheap joypad or memory card with a few extra bells and whistles (rapid fire, extra memory, whatever), third party is really the only way to go. And we're here to help you steer clear of the crap. But first, let's spiff up that Game Boy Color of yours...

Game Boy Camera

Company	Price
Nintendo	\$19.95

Nintendo's digi-cam contraption is quickly turning from a clever toy to a must-own peripheral. Forget for a sec that it packs a brilliant animation editor that's perfect for Spielberg wannabes. The big deal here is that the GB Camera also interfaces with Rare's upcoming Perfect Dark, via the Transfer Pak, letting you map your noggin onto in-game deathmatchers. Finally, you'll be in the game.

Worm Light

Company	Price
Nyko	\$9.99

We've never seen a Game Boy light this good. Perfect for late-night road trips or playing Pokémon under the covers, Nyko's elegant Worm Light taps power straight from your GBC with minimal drain on its batteries. Just be sure to adjust its flexible stalk to avoid glare.

The best peripherals for the *Game Boy*

Color Protector

Company	Price
InterAct	\$6.99

It may not stop stray bullets or charging rhinos, but InterAct's hard-rubber cover is tough enough to guard your Game Boy from most real-world injuries. Trust us—our office GBC takes heavy abuse, and the Color Protector has kept it scratch-free. A Nintendo-licensed product, the Protector fits the GBC perfectly. You even get a carrying strap. Best of all, this thing is cheap.

Rock 'N' Shock

Company	Price
Nyko	\$29.99

Sure, the "shock" function on this game is mighty lame (the louder the volume, the more it shakes). But turn vibration off and Nyko's Rock 'N' Shock becomes an invaluable GBC gadget. Once plugged into the GB's battery slot, this rechargeable dynamo pumps about 10 hours of power—even when you crank up its twin speakers. Plus, the Rock 'N' Shock's rubber grips make the GBC easier to handle for big-handed gamers.

Look for the license

It may seem like a clever marketing ploy. Third-party peripheral companies pay the console manufacturers a hefty licensing fee. In turn, Sony, Sega and Nintendo grant the third parties an official license for their peripherals. The peripheral companies then sell their licensed gadgets—which go through a rigorous testing process and must meet numerous technical specifications—while at the same time they warn us gamers to avoid any unlicensed gear from the competition. They say unlicensed peripherals may damage our consoles. They want to scare us into buying their own licensed gear.

And you know what? They're right, for the most part. Console repair folks we talked to said a lot of the cheaper, unlicensed peripherals don't always follow the system manufacturers' electrical specifications. Shoddy joypads or racing wheels may draw too much current from the controller port, for instance, and blow a fuse in your system. Memory cards may lose or corrupt saves. N64 Expansion Paks may cause lock-ups in certain games.

So, if you're gonna buy third-party gear, do yourself a favor and make sure it's licensed. Identifying licensed peripherals is easy: just look for an official system logo on the box. The logo will usually be printed on the peripheral itself, too. Sure, you could save a few bucks and go with an unlicensed joypad, steering wheel or whatever, but it may cost you in the long run if that cheap peripheral screws up your console.

The best peripherals for the Dreamcast

Arcade Stick

Company	Price
Ageitec	\$49.95

It's simple: If you play fighting games, you should have this arcade fighting stick. It's basically the first-party version from Japan brought over from Ageitec. It's durable, looks cool and is the perfect complement to any fighter on the system—especially Soul Calibur!

Dream Pad

Company	MSRP
Mad Catz	\$34.99

As far as third-party controllers go, the Dream Pad is a keeper. Its rubberized bits make the thing feel good in your hand, and the fighting-game-style layout of the buttons is a nice plus. It's a high-quality replacement pad.

Stuff to avoid...

For every 10 peripherals worth buying, you'll find a hundred shoddy gadgets that add absolutely nada to your game-playing experience. We've picked a few culprits for each system. Avoid these at all costs.

Force Pak

Mad Catz, \$19.99

Do we really need a goofy little light on the end of our Jump Pak? We don't think so. Besides, the thing doesn't always respond properly in certain games.

Dreamcast Light Guns

Mad Catz, \$29.99

It's like this: If you bought a gun for N64 2 and it worked, consider yourself lucky. We've heard of calibration problems with both guns. The problem could be with your TV—or with the guns. Either way, we can't recommend them.

Fishing Rod

Company	Price
Sega	\$54.99

OK, so there's only one game out of the point to use this controller with. But if you're going to play some Sega Bass Fishing, you really should do so with this genre-specific device. It has a Jump Pak built in.

TremorPak

Company	Price
InterAct	\$9.99

If you're having trouble finding the first-party Jump Pak, and desperately need to feel your DC pad rumble around in your hand, consider the TremorPak. It works well, and does just about the same thing Sega's add-on does.

Rally Wheel

Company	Price
Atari	\$149.99

Like the Arcade Fighting Stick from Agetec, the Rally Wheel is more or less a first-party peripheral (at least it was in Japan). Although it slips around a little bit on some surfaces, the thing won't do you wrong in any Demarc racer. Also consider Pelican's DC racing wheel.

In the cards...

It may have taken some painful trial and error—saves were lost, tears were shed—but in the end we learned one valuable lesson about memory cards, paks and VMUs: Stick with the first-party stuff. Sure, you'll find a lot of fancy third-party gear out there, cards and paks that can store as much as 48 times more data than conventional first-party cards. Heck, you'll even find memory cards shaped like everything from basketballs to Duke

Nukem. And many of these super savers are even cheaper than Sony's cards, Nintendo's paks and Sega's VMUs.

But avoid the temptation. It's our experience that a rare few of these units can be a little flaky. We've had saves lost or corrupted by cheap third-party save devices. So you're really best off buying first-party cards, paks and VMUs from Sony, Nintendo and Sega.

It's not like they're outrageously priced, and you won't have to worry about losing your save for that last level of Tomb Raider: The Last Revelation or Shadow Man.

Still, if you're determined to invest in a third-party save peripheral—and you own a PC—go with InterAct's DexDrive (available for the PlayStation and N64) or Mad Catz' Data Deck (available only for the PS). Both let you transfer your saves to a PC, thus giving you nearly unlimited storage—not to mention the ability to e-mail saves to pals. The Data Deck will even recover some types of corrupted saves. You'll also find numerous Web sites with saves and cheats you can download to your card or pak.

As far as which one is the better buy, well, the DexDrive and Data Deck are very similar, right down to their software interfaces. But since the Data Deck came out later, it has the advantage of being able to read the DexDrive's save format, while the DexDrive currently cannot read the Data Deck's proprietary file format. So, if you have a Data Deck, you can download save files from InterAct's Web site, but not vice versa. It's that bonus versatility that—although hardly fair to InterAct—forces us to favor the Data Deck.

The best peripherals for the PlayStation

Guncon

Company	Price
Hanco	\$55.99

If you've ever played a gun game on the PlayStation, then you've probably handled one of these. But if you're thinking about using those holiday gift certificates for something different, look into the Guncon for any Guncon-compatible shooting games you pick up (it'll be packed with a game).

Fishing Stick

Company	Price
Agetec	\$59.99

Here's the thing about this incredible fishing controller from Agetec: In order to get it, you have to buy Bass Landing. But if you want the controller, you like fishing games. And since Bass Landing is a fun, moderately technical and nice-looking fishing game, everything works out just fine. You get a game and the controller in one handy package.

GT2 Wheel

Company	Price
Pelican	\$29.95

It was a toss-up between the officially-licensed Ascii Altershock Wheel and the unlicensed GT2 Wheel. When it was all said and done, the GT2 Wheel—even though it doesn't have external pedals—is a better package. Granted, either way you'll go you'll be happy as both set-ups are top-notch. But the GT2 Wheel is compact and cool-looking, is designed incredibly well and most importantly works like a charm in all racing games.

Infrared Controllers

Various Companies • PS, N64, DC
In general, these things just don't work well, and they require batteries. Companies who manufacture such devices often claim its infra-red is new, better and different than others, but in most cases it's just the same old thing.

PS Cooling Devices

Nuby, New Players • PS
Just how hot does your PlayStation get? If you have an older model, maybe these ridiculous-looking cooling devices will help your situation. Otherwise, don't cheapen the coolness of your Sony system.

DID YOU KNOW...

Soul Calibur is still played daily by one or more staff members (from EGM and/or one of the other magazines).

EGM is often referred to as the Flagship magazine.

Many EGM staffers have been watching the movie Gummo from Harmony Korine (the director of the controversial movie Kids). If you have a chance, you should really watch this film. It's very strange.

He recently shaved his head. He looks like an Asian version of one of the Beastie Boys.

Tugboats often help push big ships out of a harbor or aid them in docking.

Shoe recently spent \$60 on a toilet paper roll holder for the bathroom in his new house.

All of this and more can be yours by simply sending in a little card with your name, address and telephone number on it. See above and below for further details.

Staff Profile: Eugene Sakarelli

Real Name: Eugene "Olga" Sakarelli
 Alias: Elephant Sak, E-Sak
 Country of origin: Turkey (born in Italy)
 Age: 28
 Weight: 376 lbs.
 Blood type: AB+
 Skin type: Slightly oily
 Occupation: EGM Mascot, Professional Wrestler

Hobbies outside of gaming: Performance Art, hanging out with friends, talking on the phone.

How I got into professional wrestling: When I was just a teenage boy, I met this man named Mahir who was running a circus in my village in Turkey. A giant bear escaped from its cage and started attacking the audience. I did the only thing that made sense to me... I wrestled that bear to the ground and destroyed it. Mahir must have seen potential in my skills. I joined his traveling circus,

and he taught me the ways of wrestling...and life and love. Slowly I made my way up the ranks of the Extended Turkish Circuit and became champion of Europe. God bless the ring.

How you make me: Go into the Create Wrestler found in WWF Altitude (any system). Now select Create. Next select Body. For Body Type select Male Obese (I am not ashamed of this option). Go to the previous menu and select Skin Type. Click on Plain. Go to the previous menu. Skin Color is set as the default color so no need to go into here. Go back to the Create Menu and select Head. Select Eyes and pick Standard (this doesn't matter much since I'm often wearing goggles or my shades). Now go back to the previous menu and select Nose. Pick Average Nose 4. Go back and select Mouth. Pick Standard Mouth. Go back and select Hair. Pick Long Bangs 1, and change the color to a darkish brown. Go back and select Beard. Pick Goatee 4, and change the color to the same darkish brown color as my hair. Go back and select Accessories (skip Mask since I don't wear one). Under the Accessories menu, select Sunglasses. Pick Sunglasses 1. You can skip the rest of the stuff under the Accessories menu.

Now go into the Upper Body menu. Select Shirt, then Tanktop and pick Plain. The color of the tank top has to be very dark...almost black. Now go back and select Elbow Pads. Pick Generic, and change the color to a dark grey...nearly as dark as my tanktop. Now go back and select Gloves. Pick Cut Off Gloves, and change the color to a dark red. That's it for the

Upper Body menu.

Now go back and select the Lower Body menu. Select Shorts, Men and pick the Long Denim shorts. Change the color to the same color as my tanktop. Now go back and select Kneepads, and pick Generic. Make these the same dark red color as my gloves. Then go back and select Shoes, and pick the Sneaker type. Make these the same color as my shorts and tanktop, but more blue.

Next go back a couple of menus to Name. Obviously you'll want to enter all of the important information in here such as my real name and my alias (I prefer E Sak). Now go into Attributes, and slice up the points as such:

Strength: 9
 Toughness: 4
 Speed: 8
 Recovery: 5
 Charisma: 6
 Mat Skills: 4

Now it's time for my moves. Generally speaking, I prefer to use my own special brew of moves. But since those are very secret, I can't give them to you. Think of my array of offensive and defensive tactics as my secret recipe—much like my mother's secret beef stew stew pie recipe back in my homeland. So go ahead and use Kane's moves for now. Perhaps someday I will tell you my moves...or not. Next, select Personality. Here's how this menu breaks down:
 Crowd: Cheer
 Fighting Style: Kane
 Theme Song: Slugochugugug
 Entrance: Sable (do not question)
 Run-In Partner: Stone Cold
 Voice/Grunt: Fatboy
 Now add red text to both front and back. Skip the first line, put an "E" on the second line and "SAK" on the third.

Pro Shock Stick

Company	Price
Blaze	\$29.95

Play fighting games much? Then you really should get yourself some sort of arcade stick. There are a few of them out there, but none quite like the Pro Shock arcade stick. It has that sweet iMac look, a heavy-duty feel and should last round after round. Plus, it rumbles.

Multi-tap

Company	Price
Sony	\$29.99

Now more than ever, owning a Multi Tap for your PlayStation is worth it. New games like Worms Armageddon, You Don't Know Jack and Quake II are all about four-player fun, and the Multi Tap makes this sort of experience possible (or easier in some cases). Besides, it's a first-party product you're bound to use at some point in the future.

ShockHammer

Company	Price
Thrustmaster	\$29.99

As far as third-party controllers go, the ShockHammer is the one to go with. We have some issues with the placement of the shoulder buttons, but overall it's a good-looking, quality product.

Camo and U.S. Flag Pads

NARI • PS

Are you a member of a militia or an extreme patriot looking for the perfect extra pad for your new PlayStation? Then look no further. 'Nuff said.

RF Max 900

Hyku • PS, Sega, DC

Another neat concept that just doesn't quite work. One unit hooks to your TV, the other to your system. Voila! Everything is wireless. But at what price? We experienced very poor picture quality in our tests. Don't bother.

The best peripherals for the Nintendo 64

TruSteer 64

Company	Price
Invent Tech	\$44.99

Of all of the gadgets that have come along, this is the strangest. It's a foam wheel that snaps snug onto your N64 pad, and allows you to steer the analog stick around (there's a notch in the foam wheel the analog stick fits into). Great for those who don't want to deal with a big steering wheel and pedals. Also consider the Ultra Racer 64 by InoAct.

StingRay 64

Company	Price
Thrustmaster	\$29.99

Like the Shock Hammer for the PlayStation, the Thrustmaster-made StingRay is a great choice as far as third-party peripherals go. It has an interesting and completely functional design, and the metallic shine really adds to the overall feel of the thing.

NASCAR RacePro

Company	Price
Thrustmaster	\$79.95

If you're going to buy a setup like this, chances are cost isn't a major concern. After all, you want a realistic and high-quality feel. This wheel and pedals have what you need—at a price. The main unit sits nicely on your lap, and the pedals go on the floor. The pedals could've been more substantial in size, but overall, the RacePro is solid.

Rumble Rod

Company	Price
Mad Catz	\$29.99

Obviously you'll need a fishing controller if you like playing fishing games. And although we had some minor issues with the Rumble Rod, all in all it's good for you armchair fishermen out there. Note: It requires batteries.

Leather Pad Gloves

Everybody Accessories • PS, N64
Maybe this sort of thing works with Palm Pilots and cell phones, but not with controllers. Do you really need leather on your PS and N64 pads? We didn't think so. Spend the money elsewhere.

Gold and Silver Pads

Innovative • PS, N64
Sure, it sounds like a good idea. If something's gold or silver it must be worth something, right? Not in the case of these pads. All they have is an interesting look—quality-wise, they're just average.

Rocker Pak+

RAM • N64
Now here's something novel: A memory pak and batteryless rumble pak built in one handy unit. Of course, it has 64 memory so don't trust your saves to the thing. Besides, the empowered rumble feature isn't very impressive.

The best peripherals for All Systems

YST-MS50 System

Company	Price
Yamaha	\$149.99

When it comes to speakers and what not, a higher pricing generally means higher quality. Which is the case with this Yamaha satellite and subwoofer system. It sounds incredible, and it's black—which is always cool.

Xplorer FX and GameShark Pro

Company	Price
Blaze (Xplorer FX) InterAct (GameShark Pro)	\$39.99 \$49.99

Cheat devices—some say they ruin the fun of games, others swear by them. If you're in the market for one, there are only two you should consider. The Xplorer FX from Blaze and the GameShark Pro from InterAct. Why recommend both? Simply put, they both do the same thing, in about the same way. Plus, the extra stuff each does (movie and image viewing, virtual memory, etc.) is also very similar. You'll be happy with either one you buy.

Game Doctor

Company	Price
Digital Innovations	\$34.95

If you have discs (games, music, DVDs, etc.) with scratches in them, you need the Game Doctor. The thing will fix most any surface scratches in a matter of minutes. Now you don't have to toss skippy discs in the trash, or take them back to Funco Land!

ScreenBeat

Company	Price
Spectra Video	\$49.99

This more affordable satellite and subwoofer set—designed specifically with console gamers in mind—will more than do the trick if you're looking for better sound from your games. It pumps bass like there's no tomorrow, and has multiple jacks in the front of the woofer. Plus, it's really darned hip-looking.

Intensor Chair

Intensor • All Systems
If you have a lot of dough, maybe you can justify spending a couple hundred bucks on this boomie! chair. But for the average gamer, it's just not worth it. Buy yourself some nice speakers and a game or two instead.

Novelty Memory Cards

Various Companies • PS, N64

Just how big of a fan of Lara Croft or Duke Nukem are you? If you're so into them you had to see a shirik, then chances are you already own these goofy-looking thing. They work fine, but all of them are just so weird.

Universal Rocker Pad

NAKU • PS/N64

You'd think a novel product like this PS/N64 in-one controller would be perfect for multi-system gamers. Problem is, it's just a PS pad with N64 buttons mapped onto existing buttons. Nice idea, but it's awkward at best.

**Williams' Star Trek:
The Next Generation**

By the time Roger Sharpe stood before the New York City Council in 1976, pinball had been banned in the Big Apple for 34 years, ever since Mayor Fiorello Henry LaGuardia declared it a game of luck, as evil as gambling, and smashed dozens of machines in front of a crowd of cheering onlookers.

It was all up to Sharpe to make America's most celebrated coin-op legit again.

Then a 27-year-old editor for *GQ* magazine who was writing a book on pinball, Sharpe had been drafted by the New York State Association to prove to the council that pinball was a game of skill, not luck, and thus not a form of gambling. Los Angeles and Chicago had already overturned similar bans on pinball, and the State Association wanted the game, and the big bucks it made, back in New York City, too.

After delivering an hour of expert testimony to the six council members, Sharpe stepped up to a Gottlieb pinball table called *Bank Shot*, yanked back the plunger in front of the TV cameras gathered to capture the occasion and commenced to demonstrate the skills needed for this so-called "game of luck." Despite the cameras and the council's scrutiny, he wasn't nervous. Sharpe had honed his skills in the city's peep-show parlors and other shady hangouts—the only places he could find outlawed pinball tables. His first ball bounced between bumpers, shot up ramps, doing everything he wanted it to do.

Then Sharpe got cocky. "I don't know what I was thinking. I was foolhardy and probably too young to know better, but like Babe Ruth I actually called my next shot," says Sharpe, who today is Williams' director of licensing. "I told the council members that if I pull the plunger back just right, I can make

the ball fall down the center lane at the top of the playfield, because I wanted to show the skill involved right down to the plunger."

Sharpe launched the ball. It arced up and over the center lane, missing it. Then it bounced back, arcing over the lane again. It bounced a third time, its momentum waning, its arc tightening. It dropped straight down the middle lane, exactly where Sharpe predicted.

The council didn't need to see any more. It voted unanimously to drop the ban on pinball. Mayor A. Beam signed the law allowing the game's return on Aug. 1, 1976, which also happened to be Sharpe's birthday.

The history of pinball is riddled with similar tales of victories and setbacks. It's the kind of thing that makes fans of this wholly American and mostly family-run industry wistful. But no news struck with more force than when Williams—which had been making pinball machines since 1946—announced it was leaving the amusement business and would concentrate solely on manufacturing gambling equipment and the occasional video game contracted by sister company Midway. That leaves only one pinball manufacturer, Stern Pinball Inc., located near Chicago, to build machines for this once-booming business.

Williams' pinball-assembly operations shut down Nov. 19, 1999. *Star Wars: The Phantom Menace* was the last game to roll off the line. It was the second of Williams' vaunted "Pinball 2000" titles, which blended video-game computer power with traditional mechanical pinball components. Williams had hoped Pinball 2000 would revitalize the sagging pinball market, and the company called the program a success last summer. Unfortunately, with losses from its pinball division

Now that Williams has shut down its assembly line, everyone's asking the big question...

Is

pinball
really dead?

by Crispin Boyer

Williams' PinBot

"Pinball is a very romantic product...but that's not what puts money in stockholders' pockets." —Sega's Peter Gustafson

nearing \$18 million over the last few years, Williams just wasn't seeing the mega profits it wanted from the Pinball 2000 line. The company had gone public in '96. It had stockholders to answer to. "It wasn't that Pinball 2000 wasn't successful," Sharpe says. "It's it wasn't successful enough for a publically held company that needs different profit margins. It's like saying *The Phantom Menace* was a failure because it didn't do the type of box office *Titanic* did."

Peter Gustafson, director of sales and marketing at Sega Enterprises Inc., wasn't surprised at Williams' decision. "Pinball is a very romantic product," he says. "It's a historical product, rich with history and stories. But that's not what puts money in stockholders' pockets. It's positive return on an investment that does that, and Williams wasn't seeing that out of the product, although they were trying."

Gustafson is a nearly 20-year veteran of the pinball industry. He's seen it at its lowest points, when fans feared the pinball era was finally at its end. In fact, Gustafson's first job in the industry was as a field service representative with Bally Pinball in 1980—right when video games started swiping pinball's

business. "From the day I walked in there until the day I left, more people lost their jobs every single week," he says. "Bally Pinball was a 220,000-square-foot facility in 1980, with 1,400 employees producing 500 to 600 games a day. When I left in late '82 to go over to Bally-Midway, there were 40 employees who made the transfer to the Midway facility. I was the last guy at pinball."

So, just like any other industry, pinball has taken its knocks. During World War II, all the major companies, including D. Gottlieb and Bally, ceased pinball production completely and switched over to bomb-site manufacturing and other precision engineering needed for the military. Of course, they switched right back after the war, and the introduction of the flipper in 1947 kicked demand for the game into overdrive (not to mention that pinball gradually became a hit overseas, where American G.I.s had left their machines behind for the French and British to play with).

Suburban sprawl and shopping malls nurtured further demand for pinball through the '50s, '60s and '70s. By the mid-'70s, coin-op was a \$4 billion-a-year industry, and pinball

created 85 percent of that revenue. By 1985, with the rise of arcade video games, coin-op swelled to a \$9 billion industry, but pinball's share had shrunk to 20 percent. Just a few years later, by 1983, the industry had constricted back to \$4 billion, and pinball nearly fell off the gaming landscape.

But, slowly and steadily, pinball crawled back from the brink again. By the early '90s, thanks to amazing titles like Addams Family, Star Trek: Next Generation and Terminator 2, pinball revenues had grown to about 40 percent of the coin-op industry's \$8 billion yearly take.

"You almost wonder how and why it has managed to endure through all of it," Sharpe says, "through the legal restrictions, the changes in public mores, the accessibility through locations, the new technology coming in. But somehow, somehow, there's always been pinball machines. When everybody has said it's over and it's done, pinball has managed to resurrect itself, reinvent itself and say, 'Oh no—we're still around for a while.'"

Which brings us to today: Pinball revenues are once again in the nether regions of the industry's boom-bust cycle. Experts say only about 15,000 machines will be sold this year worldwide—compared to the hundred thousand that sold in 1992. And with Williams closing up shop, many claim that pinball

really is dead, that it has finally run out of innovations to hook a new generation of fans.

Just don't tell that to Gary Stern. "We used to talk about us being the last man standing," says the 54-year-old president of Chicago-area-based Stern Pinball Inc., the only pinball manufacturer left, "but saying that makes it sound like we are going to leave pinball, and we are committed and dedicated to pinball."

Stern's company and family background are so intertwined with pinball that he jokes he's been in the business for 54 years. His father, Sam, bought half of Williams in 1948 and eventually ran the entire company. In 1986, Gary Stern put together a business plan for a new company, Data East Invested in it. Data East Pinball was born.

It was a small company. Employees hid the initials of their children on cabinet art. But blockbuster machines such as Secret Service and Torpedo War led to bigger licensed hits like Back to the Future. The company grew.

Sega, which partially owned Data East, bought Data East Pinball in 1994, renaming it Sega Pinball Inc. Its design teams led by legendary pinball creator Joe Kaminkow, Sega Pinball turned out hit after licensed hit, hyperactive tables like The X-Files, Jurassic Park and South Park. Stern remained in charge

**"...we are committed and dedicated to pinball."
—Stern Pinball President Gary Stern**

Crammed with about 3,000 moving parts, pinball tables are far more complex than coin-op video games. And Sharpe says the country's lack of technicians skilled in maintaining and repairing these machines is one reason behind pinball's waning popularity. "With a pinball machine, it's like going to a bowling alley," he told us. "You have to be of the lanes sooner or later. Otherwise, it won't be fun for anybody."

of the company throughout, and in October '99 he bought it from Sega—was paring away divisions to focus on the Dreamcast—and renamed it Stern Pinball Inc.

Stern's design theory takes a simpler approach than Williams' heavily computerized Pinball 2000 gimmick. Plenty of pop bumpers, heavy bouts of multiball—that's the type of mostly mechanical action you'll find in a Stern pinball game.

It's pinball targeted at the casual gamer who dumps quarters in the thing between beers at a bar. It's pinball you're more likely to find in cafes and pubs, not glitzy arcades. And it's the type of pinball Stern thinks will stick around for a long time. "We haven't had a lot of new machines made in some time," he says. "There's a demand for us now. There's room in the pinball market for one low-budget, economically run pinball company that's making mechanical-action pinball. That means there's not room for two of us, and it also means

there's not room for a public company and all the entrapments that come with that. This is a grind business, and we're gonna grind with it."

So like Sharpe, whose lucky shot brought pinball back to New York City in 1976, Stern is doing his part to preserve this coin-operated American icon. He may be the last man standing, whether he likes the phrase or not, but he's also the last man making a machine that many feel is too tied in with our culture, with our history, with our youth, with our country to die. "It's not just set dressing on *Hoppy Days*," Sharpe says. "There's something much more to it than that. It's a fully tactile experience, and as long as there is not a way to easily replicate that experience in any other means, there's going to be a place for it. That's why I find it difficult to believe that now, out of any other time in history, we should fear that pinball's gone forever."

Want your own pinball machine?

Then brace yourself—it's a more involved undertaking than buying a regular coin-op. Kick off your quest in the Yellow Pages, under "Amusement," and dig up numbers of local coin-op distributors and specialty shops (trust us—you want to buy your pinball machine locally, since you'll likely get on-site service and a warranty). If you lack techie know-how, you're best off browsing at specialty shops, which often sell reconditioned machines guaranteed to be trouble-free.

Distributors and arcades may sell so-called "reconditioned" wares, too, but don't expect the better-than-new overhaul you'll find on a pinball machine sold at a specialty shop. "Typically, distributors'll clean it up so it looks good cosmetically, but if it's working, they won't bother to go further than that," Larry McGilvery, owner of LM Amusements in Lake, Ill., tells us. "That's not exactly what I call a full reconditioning. When I do it, I reassemble everything. All the posts are tightened, all the plastics are cleaned, I adjust the guide rails and I completely replace any wearable part on the flipper mechanisms."

The more like-new your machine, the less cash you'll blow on day-to-day maintenance. "You won't have to do a lot in the first year if the machine's reconditioned properly," McGilvery says, "other than to change the batteries. And waxing the playfield is a key thing, to keep the dirt off, because that's where the wear comes in. After a couple years you'll want to tighten some posts, because they'll get loosened up after things have been battered around." It won't hurt your pinball machine to leave it on all the time—it was designed to operate 24 hours a day—but you should switch it off to save electricity if you won't be playing it for a while.

Now the big question: How much will your pinball machine cost? Expect to spend anywhere from \$400 for an old, reconditioned unit (Williams Flash, released in '78, will run you \$795 at McGilvery's shop) to \$5,000 for a brand-new table. Yet surprising as it may sound, older is better. "I suggest that most people don't buy a new pinball machine for the home," McGilvery says, "because it is a large sum of money to spend on something you may get tired of in a couple of years, and it depreciates fast. If you wait two to four years, as a game gets older, it becomes more reasonable. Wait three or four years and what would normally be a \$4,500 to \$5,000 game could typically go for a little bit more than half of that reconditioned." As an added bonus, older machines will also be loaded with the newest software and mechanical fixes, since new pinball machines often ship with bugs.

Before handing over money for your pinball machine, open the playfield and eyeball it for obvious signs of wear, look for cracked ramps, worn rubber, dirty nylon rings or signs of obvious rewiring and jury rigging. While none of these problems may interfere with the machine's operation now, they may develop into major snafus months after you've lugged the table home. Our best advice, though, is to take a crash course on pinball tables and their inner workings. Head to www.pinball.com (Williams' extremely comprehensive pinball site) or check the newsgroups for pinball FAQs. These machines are complicated beasts. "They come in an enormous variety of mechanical and solenoid setups, depending on their age. But the more you know about their workings, the more chance you'll have of dodging a lemon and preserving pinball in your living room forever."

Our Philosophy

10 9 8 7 6 5 4 3 2 1 0

EGM rates games based on how they compare with other titles on the same system. The highest score we'll give a game is a 10. When a game receives a 10, you can rest assured it's one of the best games ever made—a revolutionary title that truly stands above everything else in its genre for its time. At the other end of the spectrum sits the lowest score a game can receive: a 0.0. This is the kind of game you want to avoid at all costs. It's pure crap, as our scale (above) explains. In the middle lies the average grade, 5.0. We repeat: 5.0 IS AN AVERAGE GRADE. Simple, ain't it?

Our Awards

Platinum Awards go to games that get four 10's, the best and rarest review a game can get.

Gold Awards go to games whose average score equals 9.0 or higher.

Games that average at least an 8.0 receive **Silver Awards**.

Funny thing about Armada: I'm not so excited about this game, but I can't wait for its sequel...That's 'cause **this thing is crammed with sunset potential!** Like Gauntlet Legends in space, Armada lets you and three pals battle legions of enemies while building your character with experience points. It's a novel idea made better when you factor in the vast assortment of enhancements you can buy with the money earned from successful missions. You can only equip four power-ups at a time, so you'll need to think hard about the gadgets you invest in (some items reinforce others, adding more strategy). Advance enough levels and you'll gain access to super weapons, which you'll need to battle the big baddies found far from your hometown in the game's nearly limitless galaxy, which is filled with curiosities you'll discover on mini-quests. Still, it wasn't long after I started the game that I settled into this dull pattern of a fly to a patch of space where I can get the most experience and dash then hit complete current mission. I can only repeat those two steps so long before things get kinda boring. Armada's open-ended game play means you run out of things to do after the 10th mission or so. The game is best played with no more than three players, since things get chaotic with four players and a screen filled with enemies. **Crispin**

I'm not blaming the developers, but I do believe Armada could've been more enjoyable in an open-ended online universe filled with hundreds of online players. I just think this type of game lends itself to that sort of thing. Flying around in space killing aliens, visiting space stations and completing missions by yourself gets lonely—and boring. **Luckyly the four-player stuff made for a good time, and added to the replay fit just needs more.** **Shawn**

I'm in love with the graphics and the so-much-more-than-just-a-shooter premise. This is a fantastic idea for a sci-fi game. But the gameplay is fairly blah. It's just a lot of straightforward shooting—it's not even as challenging or addicting as AstroD. The four-player game isn't that great either (it's too chaotic). Armada is definitely worth checking out...just don't get your hopes up too high. I really hope the sequel takes the RPG thing up a notch... **Shoe**

The idea of mixing action and role-playing is very admirable, but the repetitive nature of the game's play means that the **gameplay is fairly blah. It's not even as challenging or addicting as AstroD.** The four-player game isn't that great either (it's too chaotic). Armada is definitely worth checking out...just don't get your hopes up too high. I really hope the sequel will need better play balancing. **John**

Dear video game developers, while we certainly appreciate your efforts in bringing us the highest quality graphics that processors can process, we do politely request that you throw in some gameplay as well. Yes, blowing stuff up real good is fine and dandy...and even a little fun now and then. But a successful recipe for a game requires more than just the two ingredients of "pretty" and "boom-boom." It was thoughtful to include the use of multiple vehicles—we have to admit, the manned target stages are cool. But when the choice of other rides includes slow-as-molasses tanks, hand-to-control helicopters and jets whose cannons are as useful as BB guns, it's difficult to get too excited. Oh, thanks for the two-player mode, but no thanks, the excitement level there didn't raise our heartbeats one bit, and after five minutes, we desperately wanted to turn it off. No offense. Anyway, **it's fairly obvious this game is nothing more than a technology demo, so in these regards, you have a runaway success.** Personally, I'd give the game a "D" for visuals. Anyone who wants to show off what their PC can do should, without a doubt, use your product. But we're sorry to say the overall, repetitive experience of going through unimaginative mission after unimaginative mission has left a bad taste in our mouths. Sorry. **Shoe**

Incoming reminds me of all those ho-hum games that hit the PC at the dawn of 3D acceleration. It's a nice-looking shooter with dual, supremely simple gameplay. Sure, I like to blow stuff up as much as the next twitch gamer—and Incoming gives you plenty of targets. Its turret stages are satisfying in a primal kinda way. But you'll find much better action games for the Dreamcast (Dependable, anyone?). Best this for really cheap, really short-lived thrills. **Crispin**

You can really tell that this was developed when 3D cards were flat, emerging on the PC games scene—because Incoming is quite literally all style and no substance. Using every graphical trick the team at Rage could think of, the whole thing is just a mess of colored lighting and fancy effects. Underneath all this though is a repetitive old-school shooter that will keep you interested for about 30 seconds. Don't waste your money. **John**

Incoming is in desperate need of an interesting plot or story line. It has everything but that. The graphics are beautiful, the frame rate is fast and snappy, the explosions are incredible. **It just has nothing to bring it together.** It's a shame, it could've been great. On the other hand, as a mindless shooter, it's not bad. Unfortunately even that gets boring. Like Shoe said, if nothing else, Incoming is a fine showcase of the Dreamcast's graphic power. **Dean**

F-1 World Grand Prix

Publisher: Sega
Developer: Video System
Featured In: EGM #126
Players: 1-2
Supports: Jump Pack
Best Feature: Gorgeous graphics
Worst Feature: Over-sensitive controls
Web Site: www.sega.com

Before you notice anything else about this, it has to be said that the graphics are really quite wonderful. They're certainly a step up from any F1 games that you might have seen before—and they give by so smoothly that you really get a keen impression of speed. As far as features go, it has everything you'd expect, although I was surprised to see the '98 season as the game's focus rather than the '99. If you follow the sport though, it'll seem a bit odd racing with all the "wrong" drivers in the wrong teams. Speaking of drivers, they're all present and correct—with the exception of Jacques Villeneuve, who's obviously such hot-shit that his license comes with a higher price tag for Sega. On the way, we can live with our him. It's nice to see that you can turn all of the '98 season events on too—if you crank all the settings up and race for long enough, drivers will exit out where they really did during the season, and pit events will occur just as we saw on TV. **It's all very impressive stuff.** But it's not without some problems. My biggest worry is the fact that the controls are so damn sensitive. You have to be super gentle with the analog stick—almost twitching and jansing it rather than yanking it back and forth. It takes some getting used to. Look at it this way, it'll make you a more considerate lover as a bonus side effect.

John

I'm a bit disappointed in the way F-1 WGP turned out. I thought we were in store for not only the fastest F-1 ever, but the most accurate as well. **Two things are holding it back, overly sensitive steering and imprecise handling.** As John said, the analog control is way too touchy to work well. I agree with that. I also think these cars handle like they're on a swivle rather than on rails like they should be. Certainly not a bad game but it could be better.

Dean

There's a lot to like about F-1 World GP: the graphics are among some of the best for a Formula One racer, the frame rate is good even when you're nestled in the pack, the controls (despite what the others think) are tight and responsive, and the breakout soundtrack is interesting enough to warrant independent listening. Too bad the AI likes to ram you from behind, or that the two-player mode strikes me as an afterthought to an otherwise decent racer.

Che

I'm a complete novice when it comes to Formula One racing. Never seen it on TV and never played any of the previous games. So when it came down to playing this, I quickly found that F-1 is not about only hiding down and accelerate. After getting used to the style of racing, I could sit back and enjoy the speed afforded by some of the straightaways. The music, an ambient oeuvre of techno beats, fits the racing action well. Another decent DC racer.

If it wasn't for NFL 2K, this game would have set back video game football on the DC about 1,000 years. Not much has changed from the ill-conceived N64 version—released a couple months ago. Sure, the visuals and frame-rate have been ramped up, but that's about it. Player response is still painfully poor. Just tap the analog stick and watch your player take six strides before coming to rest. It sucks. As a wise Canadian once said, "Doesn't Acclaim have anybody play-test this stuff?" Apparently not, because the camera selections are all unusable, the passing game is atrocious, and playing defense is a detached, meaningless experience. Menus, play-calling screens and presentation also fail to live up to basic expectations. I can't stand calling a play which doesn't show me what personnel will be on the field. I don't want to guess who my slot receiver is, or if my halfback or fullback is the one. Once the play begins, frustration is taken to a whole new level. I can cite a ton of cases where my receiver was right on the target to catch the ball only to see it carbon off his back. I don't think I've ever yelled so much at a game. The routing game is evidence at best, with a few cool tackle animations thrown in. Take it from a non-smoker: I'd get more enjoyment from a pack of Camel filterless cigarettes.

Dan L

This game is really entertaining, but for all the wrong reasons. Each play is potentially more hideous than the last. It's like watching the Three Stooges play football. Quarterbacks will throw in one direction while the ball goes the other. Receivers run away from easy catches. Players will abandon their pass routes and run directly out of bounds? The list goes on and on. I'm surprised Acclaim is releasing this fatally flawed title...it's just plain awful.

Dean

My accuracy at throwing this game in the trash is better than any of the quarterbacks were at throwing the ball. I don't care how good this game may first appear, I hated it. Catching the ball is equally as challenging and fun as amputating your own hand. Any fan I have associated with video games and football has taken a hilarious blow since this nightmare. **It's the kind of effort that makes unsuspecting fans hate America's Sueday pastime.**

Todd

Is it me, or is Acclaim starting to go back to the way they used to be? Not only are they milking the crap out of their horses again (look: South Park), but they're rushing unfinished games to market. Like the last two Turbos and now this mess of a game. **NFL QB Club anno is inferior to NFL AK in every which way.** The graphics and animation are weak, the controls are awful and overall the game just lacks polish. This needed six more months in development.

Let's jump right into it: The intro is terribly lame. The cutscenes are just as bad (wait until you see the shark pirate boss scene). The game doesn't provide things the way it should (no Jump Pack, and arcade stick controls suck). The stupid computer-controlled enemies have trouble tracking you around corners and can have some ridiculously cheap combat attacks (and when they knock you down, it takes forever to get back up, allowing all the baddies to regroup at their leisure). Even though the designers did a nice job mixing in some levels with the long, the long stages can drive you absolutely insane. A couple of them are psychotic in length, with no check or save points (if you die—guess what? Start all over). Clear out attacks (you know the kind, you spin around, lose a little health and knock everyone on your asses) work like crap with their practically zero range of effect. The environments, although beautiful, have clipping problems (you know it's bad if enemies can hit you through walls). Most of the time, it's impossible to win without exploiting the retarded AI (by taking advantage of enemies' near-sightedness and drawing them out of a crowd from a distance, one at a time). There's no two-player mode, even though it's a party of three traveling around everywhere. And the camera? Ugh! **It's awesomely!**

Shoe

The idea of Soul Fighter is great. A Golden Axe-type game with good-sized levels and plenty to boot up. It's hindered by a few glaring problems. First, no multiplayer. Second, the camera is too tight on your character and likes to swing around when you take—often with dizzying results. If you can't immediately see a radius of 30 feet around you how do you know where to attack? Graphics are pretty but not enough substance here.

Chris

Does this game ever stop sucking? Er, no. Soul Fighter is an appalling excuse for a "next-gen" fighter. Obviously borrowing heavily from the Golden Axe school of mindless running and hitting stuff, it's **invented from being fun by a boring premise and a camera system that appears to be on crack.** You constantly fight with the stupid thing while trying to remain interested in the godawful repetitive gameplay. Do not buy this game. You'll regret it.

John

I'm sure we saw plenty of games like Soul Fighter when the PlayStation first came out—you know, the kind, lots of "meat" and very little of anything else. The controls in this game almost cost me a new Dreamcast pad, and let us not speak of long-leveled adventure games with no save points. I just about lost it playing Fighting Force 3 this month. Don't be enticed by Soul Fighter's delectable visuals, it's a first price of crap in disguise.

The premise for this is excellent. A game show set in South Park with all of the usual shenanigans that you'd expect to be associated with that. This question loosely based on the series and the surrounding culture are the focus of the game, with a variety of mini-games that borrow heavily from lots of retro ideas. How could it possibly go wrong? Well, for starters this kind of thing has to rely heavily on humor and throughout Chef's Luv Shack you get the feeling that the development team had some great ideas, and then wiped out all the last minute. **Everything seems so diluted and lame that it places it's almost embarrassing.** The questions are far from inspired, and in terms of scope they're not a patch on those you'd find in You Don't Know Jack. The gameplay mechanics are pretty similar to the classic quiz game, but there is some oddness that doesn't seem right. For example, if contestants don't get a question right—you never actually find out what the right answer is, you just move on to the next category. It's very off-putting and goes against the whole "test of a trivia game." The mini-games are cool though, and they introduce an element of competition that you don't get in the quiz show parts. If you do buy this, make sure you play with four people. The way you can make your own fun. **John**

ugh. How could Acclaim release this game with such pathetic load times? The between-question lulls ruin the rhythm of what should be a solid You Don't Know Jack rip-off. Luv Shack's problems don't end there. Many jokes fall flat, and the characters' one liners aren't enough to keep the laughs coming. Still, there are worse ways for four friends to pass the time. I just wish the rest of Luv Shack was as good as its clever mini-games. **Crispin**

This game has everything a hardcore South Park fan wants. It has the art style, the real character voices and the saucy, witty humor (for the most part). Nearly all of the mini-games are hilarious and quite fun, and the questions—though not quite what I was expecting—are enjoyable. **The main thing is the terribly frequent loading, which breaks up the action something fierce. Heck, the sound even cuts out sometimes. It's fun but unpolished.** **Shawn**

Luv Shack tries to do You Don't Know Jack, and it tries to do Mario Party. But it does neither well. The concept is just fine, interspersing trivia questions with mini-games (so you don't have to know trivia to score) is a great idea. But the erratic, stuttering flow of the game ruins all the fun. The PS version had understandably poor load times, but there's no excuse with the DC's memory. Luv Shack feels rushed and slapped together. **Shoe**

This looks and feels like a rushed conversion of a crappy-looking PlayStation game. This isn't surprising though, because that's exactly what it is. If you're looking for the definitive GT racing game this isn't it. The environments look awful, the frame-rate is up and down like a yo-yo, the cars look like they were turned out of Jello moulds, and they're modeled so badly you can hardly tell what they are. Quite why Infogrames invested so much in lots of cool car licenses is beyond me—why bother if the cars are unrecognizable? They don't even behave the way you'd expect them to. The tournament mode is divided into different classes—but since when would you pit an F150 pickup against an '83 Lotus Esprit? And since when would you see said pickup outperform the Lotus on the track? The whole franchise is falling apart if you ask me. **It looks, feels and plays like a game that's been rushed out.** Maybe Infogrames should stop wasting money licensing cars and paying for bands like Fear Factory, Eve 6 and Lunatic Calm so do the soundtrack, and invest some time and money in letting Pitbull Syndicate produce a decent game. We don't need a Test Drive every year. I'm sure if Pitbull were allowed to invest the time in the series they could bring it back on track. As it stands though, this sucks. **avoid it.** **John**

I'm extremely disappointed in the direction this series has gone. **It's lost all its unique personality and style and sold its name with simplistic, seen-it-before arcade gameplay.** The original idea of Test Drive was to experience exotic sport and muscle cars as they are in real life. It's strayed so far from that premise it's nearly on par with Onix's World and other such "blockbusters." Unfortunately fans of this series are in for a real surprise. **Dean**

Knowing what Pitbull Syndicate is capable of, TD6 is a real letdown. The AI is on the screwy side, the graphics aren't quite on par with what's expected from the system and the frame-rate is poor. **Certainly, a better game could've been made on the DC. TD6 has some interesting ideas, but even those aren't particularly innovative (the basic concept for the gambling and cop stuff was in NFS: High Stakes on the PS1. Perhaps it was rushed).** **Shawn**

Test Drive 6 is back in all its mediocrity this month on the Dreamcast. Despite all its good looks and a treasure trove of 3D-licensed alterna-rock, playing through this game again was a real downer. **The Dreamcast TD 6 doesn't offer anything new over the PlayStation version.** Sure, it's got a higher resolution and better frame-rates, but the gameplay and physics are still an insult to racing fans everywhere. TD 6 is not worth your time. **Ché**

Car combat games are rapidly getting old, joining the ranks of the overused and tiresome subgenres (no thanks to the one-too-many-editions of the Toristed Metal franchise). Although I was a fan of the original V8, I wasn't really looking forward to part two. After all, I only need so much gun-on-cars action in my life. V8:SO, as a sequel, is far. The new stage designs are still clever, and they're full of very creative objectives (like participating in Winter Olympic-style events in Utah). Besides that, the rest of the new stuff isn't really all that thrilling (the new cars, some different weapons, hovering ability, the ability to upgrade your car, etc.). It really isn't the fault of the developers. Like I said, it's a subgenre that's getting stale. Since this is the only game of its kind on the Dreamcast, however, I'd have to give it high recommendations. It looks fantastic. It does have some glaring texture draw-in, but that's more than OK since the frame-rate is so incredible (even in multiplayer—this is probably the smoothest frame-rate I've ever seen in a four-player split-screen game). The game does have some control issues (especially in 4p) and collision detection problems (clipping through walls and objects is common). It also could've used some more creative deathmatch modes. Still, the game looks ass on the DC. **Shoe**

The Dreamcast's first car combat game may be round about the edges. Control takes getting used to, and it suffers from minor problems. Still, this **travels exactly the kind of four-player thrills the Dreamcast needs.** The visuals are nice, but the important thing is the frame-rate stays smooth with four players. This is a robust game throughout, with highly interactive arenas, car upgrades and excellent two-player cooperative modes. **Crispin**

For the most part V8: Second Offense is a decent rip-off a slightly buggy game. **Collision detection is loose in places.** Several times I passed dutifully through an enemy vehicle at close range. It'd be nice if the handling was a bit tighter as well. It's tough to keep some of the cars in a straight line. Yet even with the drawbacks, it's still really fun. Because of the fast frame-rate, four-player is the most functional. I've played of any car combat game to date. **Dean**

Car combat games have been lacking in the multiplayer area up to this point. Not because of a lack of modes or anything, but because the frame-rate in these graphic-heavy modes often suffers—which hurts the overall intensity of group battles. Now we have a system more than capable of handling whatever is thrown at it, and it shows (minus some clipping problems). **Multipayer and co-op is a joy in this.** And the quest stuff is a blast. **Shawn**

When Sega does a game like *Zombie Revenge* on the Dreamcast, it makes you wonder why other companies can't do. Because that look and play this good. It's a perfect conversion of the arcade game, and Sega has made sure it's not a cakewalk by limiting the number of continues and adding new modes to make it more challenging and add replay value. The addition of the Bare Knuckle and Gun modes are welcome, and they play differently than the normal game. Bare Knuckle mode's got a strange addition of weird items like gum and apples to make the retro style complete (*Streets of Rage* had apples and meat you collected for health). **This game makes me long all the more for a 3D Streets of Rage.** Fighting Mode has got to be one of the latest fighting modes ever, so it's a good thing it's just an extra. Whoever gets in the first punch can keep tapping punch and will likely win. The VMU game takes up an entire VMU worth of space and isn't worth it (it unlocks some cheats and builds up your power in the Fighting Mode but that's about it). Environments are super-detailed, and there's barely a hint of slowdown even when there's a lot happening on screen. Sega's got a good thing going making their arcade games into excellent home games. Now all we need is Super GT or Ferrari F-355.

Chris

The way I see it, **you need at least one game like this in your library for a particular system.** And *ZR* fits the bill perfectly. Not only does the thing look amazing, it's a lot of fun to play with a friend. Sure, it's on the mindless side a lot of the time (it is about zombie-killing after all), but as long as your library isn't inundated with games in this genre, everything is chill. And what's this—one of the later levels is the house from *The House of the Dead*. Cool.

Shawn

People are going to think I'm weird for saying this, but I found *Dynamic Cop's* over-the-top approach to the 3D beat-'em-up to be more appealing. Even so, *Zombie Revenge* is a decent brawler that's best played with a pal. The action, as you'd expect, is mindless (made even more so because of the character's overly useful handgrips), but that's how this game is supposed to be. The replay value isn't here though, even with all the new modes.

Shoe

Zombie Revenge is 3D beat-'em-ups done right. The fine line it walks between camp and chic is ever-shifting. On the one hand, it's got guns, buns, cleavage, and gore galore. But then you look closely at all the little details that Sega throw into it and you come to appreciate just how dynamic *ZR* really is. There's a lot of sweet "design" work taking place just under the twitch gameplay. A bunch of badasses trapped in a Lovecraftian nightmare. Totally cool.

Best Feature: Blastin' hordes of bugs
Worst Feature: No checkpoints, poor frame-rate
Web Site: www.acclaim.com

If Tank shot at bugs instead of dinosaurs this would be a new Tank game. While the first few levels are short, they get real long quick. I cannot understand why developers do not put checkpoints in games with big levels. It would've cut down on a lot of my frustration with this game if I didn't have to redo every single thing again just to get to the point I had trouble with. I don't understand why, when you're near a two-foot-tall fence or ramp, you can't jump over it. At least after you kill some enemies don't respawn. There are some cool scenes where bugs pop out of nowhere over a ridge and then climb down to get you or are holding human corpses in their pincers. In a few bits you're on a monorail or other vehicle on a track shooting bugs that threaten your progress that are done nicely and mix up the action. There's no real story here, and a lot of times messages from your commander are gone before you get a chance to read them though. Graphics go from bland, repetitive N64 textures to cool-looking textured buildings and areas. Unfortunately, editing isn't marked well so if you're not careful, you'll leave a level before you've completed it and your objectives and have to start again from the beginning. If it had some checkpoints, this would be more fun (and less frustrating) to play. Rental at most.

Chris

We don't need another uninspired first-person shooter like *Armored*. The story is nothing special, and dinosaurs are too choppy to enjoy. The frame rate is chunky in the lower-end mode at times, mostly choppy in the higher mode and downright unacceptably in the multiplayer modes (which ruins them). And certain levels are terribly dark—like the developers decided to make things dark instead of foggy to cover up draw-ins. It's just not very fun.

Shawn

If the Tank games are your thing, then you'll probably really like *Armored*. It's littered with surprise attacks and edge-of-your-seat action. It's also full of niggling issues. Frame-rate—man this gets choppy in places. Check points—where the hell are they? Multiplayer—not really fun at all. *Armored* is still worth checking out though, since it does a very good job of capturing the feel of an exciting old-school action flick (like that crap-tastic *Starship Troopers*).

Shoe

I got excited when I first heard *Armored* was a Starship Troopers-inspired shooter with cooperative play. Then I played it. This thing is dull and unimaginative at worst and only competent at best. Forget about the two-player cooperative mode—it's too choppy and you face too few enemies. *Armored* just feels like another washed action game. At least Tank 2 had a cool story and slick interface. You'll find none of that here.

Worst Feature: All the old areas
Web Site: www.konami.com

Don't be fooled by the screenshots or the first few minutes of play showing the new worlds to explore and new monsters to fight. This is a Director's Cut, and nothing more. It's not a true sequel, and it's not a new game, just about everything different that's in this cart (the extra scenarios, two more characters, etc.) was intended to be in the first *Castlevania* but was dropped during the last cycles of development. Now we have it all, but it's not a real improvement over the original. That's not to say this game is bad. In fact, if you can see yourself playing through *Castlevania* (N64) again, but wouldn't mind a little bit more, then *Legacy of Darkness* would be a fine purchase. It's just unfortunate the improvements are minor. Not only that, but one of the biggest reasons to get this cart (to play as four different characters) requires you to beat the game as Cornell first. A fairly long task. If you've never played the first game, make sure to get this one instead. Even though most *Castlevania* purists scoff at the 3Dness (the game certainly isn't as good as the 2D side-scrollers), I still think it has enough classic gameplay (only in 3D, of course) and gothic flavor to make it worth playing through. On a side note, the graphics are slightly better, but the Expansion Pak-induced HDs mode is crappy. It'll make the frame-rate take a dive.

Shoe

I never played the first one, but this is exactly how a 3D *Castlevania* should play. Granted, the graphics aren't fantastic and the use of the Expansion Pak makes it look worse rather than better (choppy in HDs, smoother in low-res). The control and camera aren't great, either, but to make it worth playing through. On a side note, the graphics are slightly better, but the Expansion Pak-induced HDs mode is crappy. It'll make the frame-rate take a dive.

Chris

If you played N64 *Castlevania* six months ago, you'll suffer heavy-duty déjà-vu from this pseudo sequel. Most of it is only slightly improved and different. You get a cool new character, but you'll encounter many of the same clever platform-based puzzles, the same Bosses and the same washed-out graphics. Still, the now-and-improved stuff here makes it worth a second jaunt through *Castlevania*. Jump on this now if you avoided the original.

Crispin

Since I'm not going to get a new 2D *Castlevania* any time soon, I'll have to settle with this new 3D installment. Thankfully, it's pretty good. Even more so than the last N64 *Castlevania*, *Legacy of Darkness* captures the basic feel of the old-school games (except in 3D), and offers a slightly more robust playing experience (with four different characters to play as...once you stop them up). Note: The animation, and HDs mode need some work.

I'm probably as big a Mario Party fan as they come. Even when the rest of the staff grew up and moved on, I was still playing it one-player. Now that the sequel's here, I'm both happy and disappointed. On one hand, the game has been improved. All of the boards are more interesting with the addition of Koopa Banks, Item Shops and events that can steal your coinage or toss you around the map like a rag doll. One-on-one duels and battle mini-games add spice to the mix as well (see this issue's MP preview for more details). And with 44 new mini-games, you have what seems like the perfect recipe for a worthy sequel. Problem is, all of these improvements are minor, at best. It also doesn't help that 20 of the 64 minigames are from Mario Party 1 (that's almost a third...you'll feel like you're playing the original game a lot of the time). I'm also bummed the longest-term goals are game (saving coins to buy new boards, trying to earn 100 stars, etc.)—they provided some fun, extra incentives to keep playing new games. Even though *Mario Party 2* should probably be called *Mario Party 1.5*, or *Mario Party: Director's Cut*, it provides a decent time. If you don't mind that this cart isn't full of new surprises, and you're looking for more four-player party game goodness, then by all means, get it.

Shoe

Mario Party 2 packs just as much goofball fun as the first game—but I'm not so sure this sequel's worth grabbing if you've already played the original to death. Too many of the mini-games here feel like refurbished versions of the old ones, and you'll find few enhancements to the rules. Still, only the most jaded Mario-bashers among you would snuff this expertly crafted multiplayer experience. It'll keep you and three pals partyin' for months.

Crispin

Party games like *Mario Party 2* are the best. It makes kicking back with a group of your favorite chums for a night of lured beverages and get-splitting laughs all the easier. Sure, the game is a little childish and silly in spots, but it'll entertain you again and again. Even with all of the rounds of MP 2 we played, the variety of boards and kick-ass mini-games had us coming back for more. If you minimize guests who game, this title is a sound investment.

Shawn

I don't think Nintendo and Hudson could improve on the original *Mario Party*, but they've done it. An excellent follow-up with enough new mini-games and twists on some from the first kept me coming back. Each board has its own personality, but it's not quite so easy to screw other players over in the star department. Do not play this game alone. All that's missing are Nintendo's other characters, but I guess it wouldn't be a Mario party then, eh?

Rares pop up every now and then where you'll have to race a character to win a coveted golden banana.

time you play them. But you play them over and over again through the course of the game—with shorter times limit and higher requirements making them harder.

Control does not seem quite as tight as it should be in a 3D platform game of this type and takes some getting used to. If you stand still and perform an attack you won't be able to start moving again until it's done—leading to situations where you're surrounded by enemies unable to escape unscathed. The camera gets in the way or adjusts itself at some of the most inopportune times in levels like Frantic Factory where you have to make pinpoint jumps. Mine cart levels are DKC (thank god!) and are just races/challenges.

Rare's got a fine game in DK64. Better than most. Revolutionary? No. Fun? Yes. It'll take you many hours to complete the game, and if you want to collect everything—better set aside at least 40 hours if you're not using a hint book.

DK64 is filled with mini-games, including the original arcade version of Donkey Kong and Jet Pac (shown below). For those unfamiliar with it, Jet Pac is one of Rare's first games in the '80s for Sinclair computers.

I have a love/hate relationship with DK64. There are moments during the game where this is the best Rare has ever done—bits that tip their hat to Metal Gear Solid, boss battles, ingenious puzzles and mini-games, the variety of multiplayer games, the inclusion of Jet Pac and the original arcade DK. I especially enjoyed all of the boss battles and multiplayer games. The very last boss battle is quite possibly the most ingenious ever. There's little difference between each of the screens in four player mode and the one-player game. But all that enjoyment is spaced out by nothing but collecting items and bananas. **It's basically, get something, switch characters, repeat—that's the game.** When entering a new level I thought, "here we go again" and had to stop playing a few times because I grew tired of it. At other points I had no idea where to go next, and did a few levels out of the order you're supposed to. Instead of fog, enemies and items simply fade into view as you approach them, making it difficult to stand at one end of an area and look around and tell where anything else is. I didn't feel satisfied after finishing the game, because the ending does absolutely nothing to wrap up/further the story (even after the last boss). It just doesn't seem polished. That said, this is still one of the top N64 games. **Chris**

Rare has created a monster. Beautiful, vast and often a raging pain in the ass, DK64 is a blissful experience half the time and a chore the rest. The multi-Kong gameplay forces you to backtrack—a lot. New areas are always branching off old ones. Keeping track of where you've been, where you're going and what you need to collect will spin your noggin. Banjo was better put together; this is really all the game you'll need this Christmas. **Crispin**

For the very life of me! just can't get myself whipped up into a Rare-induced frenzy over this. Maybe it's because most of the gameplay ideas have been seen before (in Banjo-Kazooie), maybe this cute style of game is getting old...or maybe it just seems that Rare is just out of good ideas. There's little wrong with DK64, and it certainly doesn't suck—but it's another one of these games. It's exactly what you expect it to be, but nothing more. **John**

Five characters to choose from, sprawling levels to make your way through, puzzles to figure out, a ridiculous amount of stuff to collect and more—**Donkey Kong 64 is truly the adventure's dream come true.** Even if the graphics aren't the next big thing and the gameplay isn't terribly revolutionary, DK 64 is a fun game. A fun Rare game to be more specific. So if you have the desire and the stamina to take on another game like this, go for it. **Shawn**

If I were to ask you what some of the best video games in history are, and you replied with anything that had "Polemon" in the title, then you're probably not in the target audience for Namco Museum 64. But if you have any "old school" in you, then you know what we have here is one of the best compilations you could ever pick up. I mean, this cart has Ms. Pac-Man and Galaga, for crying out loud! They are two of the best (unless you can get either of the 16-bit Ms. Pac-Mans, which are actually better because they have new modes of play). **This cart is practically a must-buy** (especially for the \$29.99 MSRP), I say "practically" because a few things do bug me, and they may bug you as well. My biggest complaint is that these games aren't arcade-perfect. In fact, you'd be better off playing PC/Mac-emulated versions of these classics. Pac-Man and Ms. Pac-Man stutter a bit, and Galaga gets slight "hiccupps" in the animation once in a while, which may slow down the action and save your ass on more than one occasion (yeah, that doesn't sound like a bad thing, but you're not supposed to have Shooter Slowdown Assistance in Galaga). Even the music in the Challenge Stage is wrong. But the low price and absence of load times may make it all worth it. If you don't have these games somewhere already, get them now. **Shoe**

If nothing else, Namco Museum 64'll help you appreciate the N64's lack of load time. Just pop in this cart and boom—you get instant access to six classic coin-ops (without all the TVM crap and loading of the PS version). Trouble is, I've had a flood of these old games. Even the best stuff here—Ms. Pac-Man, Galaga and Dig-Dug—is barely worth the low price of admission. I wish they had stuck in a newer classic like Galpus instead of dull ol' Galaxian. **Crispin**

Instead of five volumes of Museum games, N64 owners get one cartridge filled with six of the best games from the '80s. Classic games like this never get old. **Missing are the museum features of the PlayStation version**, which featured viewable production art and promotional materials and sound tests so you can listen to the sound effects of each title. Still, for this price, it's a great package deal with some of the best arcade games of all time. **Chris**

I truly loved these games back in the '80s arcade days but trying to play them now using the Mame2000 digital pad really hurts. For example in Dig Bug, if you don't hit the pad precisely at the right moment, there's a good chance you'll miss your turn. It's the same story with Pac Man and Ms. Pac-Man—it's highly annoying. **Galaxian and Galaga work OK.** Pojo Position is so archaic you probably won't play it at all. Give Namco Museum a rent. **Dean**

It's funny when it comes to basketball sims, nothing has charged on the N64. Live 2000 and Courtside 2 are still the best the system has to offer. The question remains however, which is better? For starters if you're a Courtside fan, you'll be happy to hear they've fixed the annoying dribble problem. You can drive aggressively without unwillingly picking up your dribble at the slightest contact. Now that the lane is open you're free to take advantage of the excellent special moves. Cross-over dribbles, back-ins, scoot combos, etc.... They all work quite well, especially when used in the correct way. Unfortunately the momentum of the move will occasionally carry you out of bounds. Still, **when all is said and done, I actually like Courtside 2 more than Live 2000.** What really sold me is the Create-A-Player/Creator Mode. I had a blast basking my rookie through a season building up his skills and abilities while keeping the team hot. Courtside 2 has more graphics appeal than Live 2000 as well. The characters are well proportioned, fluid and easy to follow on the court. If anything the atmosphere and play-by-play could be more exciting. The crowd noise is muted and the color commentary repeats the same phrases too much. That's one area where Live 2000 is better but overall, Courtside 2 is great. **Dean**

Fans of the original will not be disappointed with the second installment of this hoops sim. **Gameplay is snazzy and presentation is top-notch.** Create-A-Player is awesome, as your new player will beef up his stats according to your gameplan. Drop some sweet passes and watch your passing attribute improve. Buy a couple trays and shooting gets a boost. A small quibble is the length of some of the motion-capture sequences. **Dan L**

There are two things going down in NBA Courtside 2. The players move really smoothly and I got the sense that Kevin Galloway and his gang really were actually out there on the court. **The special moves are a nice touch**, but they simply take too long to happen. The refs are way too tight and rebounds really jump off. The Create-A-Player is the real catch but why can't I put white skin on my created player? An all-right game, but I like NBA Live 2000 a bit more. **Todd**

The first NBA Courtside was an extremely solid game, and the sequel is even better. They fixed the momentum problem (the inability to drive the lane effectively), and they've made improvements just about every other area as well. Personally, I love the Director Mode—it's a great feature that every ball game should have. Even the Arcade Mode—which is usually an afterthought in game like this—is great fun. **The best N64 hoops game. John R**

RR64 falls victim to N64's texture RAM limitation and, as a result, ends up looking a bit like every other N64 racer out there. The exotic cars of RR get put through the ugly filter so each of them look flat, simple and unimpaired. But once you get over the drop in graphics quality, you'll soon realize that **RR64 is one of the best racing titles for the N64.** Included in the single-player mode are all the tracks from the original RR and Revolution, as well as a handful of exclusive bonus tracks. For fans of RR before the series hit number four, RR64 will be a sweet homecoming. Car physics in the game are decidedly old-school; you'll be slipping sideways at 200 mph with the slightest tap of your brakes. The one difference is that the collisions in RR64 are modeled more like the system in Ridge Racer, so crashes only slow you down but won't put you at a dead stop. It's too bad the glitches we saw in the beta seems to have carried over to the final ROM. In the exterior view, you'll notice your car getting jiggly on the road and sometimes switch across the bends. Four-player split-screen is pretty jerky, but if you keep it to three players, it's very playable. If you enjoy RR, and are expecting more of the same here, skip RR64 and go straight to RRV on PS2. But N64 owners curious about the RR phenomenon should definitely pick this up. **Ché**

I love the Ridge Racer series, and RR64 does the series justice. Granted, some of the graphics here **don't very hand N64 look to them**, but on the whole it's pretty good. If you enjoy RR, and are expecting more of the same here, skip RR64 and go straight to RRV on PS2. But N64 owners curious about the RR phenomenon should definitely pick this up. **Chris**

For the most part Nintendo did a good job of condensing Revolution, Ridge Racer and several new features into a neat N64 package. Personally I'm not a fan of the trademark Ridge Racer handling. The drifting is so unnatural and forced it ruins the game for me. **But if you're a fan, you'll like what RR64 has to offer.** Don't count on four-player being too fun though, it's slow. Also, when using the chase cam the cars appear to vibrate on the road—**weird**. **Dean**

It took me a long time to get back into the Ridge Racer "aahh" control style, but after a day or so of adjustment, I really got into this. **I'm in two minds as to whether it's actually the "best" racer for N64...but it's pretty damn close.** It doesn't look quite as nice as the PlayStation games, but it's fast, it offers a huge variety of cars and tracks—and it'll keep you going a lot longer than most similar titles on the system. **John**

Roadsters

Developer: Titus
Featured in: EGM #322
Players: 1-8
Supports: Controller Pak, Rumble Pak
Best Feature: Decent graphics and frame-rate
Worst Feature: This game is painfully generic
Web Site: www.titusgames.com

In a sea of racing games out for the N64, Roadsters is barely keeping its neck above the water. On the surface, it's a very capable racer, the main problem is, **there's nothing extraordinary about this game.** There are a handful of real manufacturers, such as TVR, Toyota, Renault, Mitsubishi and Alfa Romeo, but these brand names seem almost obtrusive among all the fictional car makes Titus couldn't get licenses for. What's more, this hint at "realism" only serves to tease us for something the game wasn't meant to deliver. Roadsters is divided into three main categories of cars: A class, B class and C class. I managed to complete all three classes my first time playing...and I wasn't even trying all that hard. The competitor's AI was also completely brain-dead. They often pit for no particular reason, and once knocked one of them into a cul-de-sac, only to see him stuck in a corner on my second lap. Although each car handled differently, you don't get a sense that the cars were truly all that unique (except that better cars had higher top speeds). To its credit, Roadsters has lush backgrounds and a pretty snappy frame rate to boot, especially in two-player split-screen mode, where you race against a buddy, and four other CPU players. Nice try, Titus...but Roadsters needed more.

Chris

If graphics were the only consideration, Roadsters would be a hit because the tracks look good. The only downside is that the gameplay is super weak (no shortcuts!). There's a pit but you never seem to actually need it. Five lap races, which you usually win by obscene amounts. They should stop making racing games where the racers yell out taunts or phrases, because they sound stupid. This is a lot better racing game on the N64.

Chris

Roadsters reminds me of Crus'n' USA, only not as good if you can believe that. Goofy characters, unrealistic physics, convertibles...it's dead to us all over again. If this unimproved racer had come out two years ago it would've gotten a few props. But with games like Beetle Adventure Racing, Ridge Racer 4, and NASCAR out there, Roadsters doesn't stand a chance. This sort of thing happens when a developer takes too long to make a game.

Dean

Well, it has some interesting cars in it. I guess. And, um...er...nape that's just about it. Just what the world needs, another middle of the road, mediocre sports car racing game with so-so handling, unimproved tracks and choppy graphics. **Play Roadsters once, and you'll certainly be able to live with yourself if you never touch it again.** It's not bad...and it's better than some of the other racing junk we've had this month—but it's not a patch on RR64.

Top Gear Rally 2

Publisher: Kemco
Developer: Softline
Featured in: EGM #320
Players: 1-4
Supports: Controller Pak, Rumble Pak
Best Feature: Unique upgrade options
Worst Feature: Frequent breakdowns
Web Site: www.kemco.com

TGR 2 is a mixed bag of tricks. On one hand it's clearly arcade-fortified, loose and wild stuff. On the other it inspires to be sim-like by imposing lots of micro-management of the vehicles and parts. The graphics are cartoony, the physics unrealistic and the cars non-licensed, but oddly the nature of the game dictates that you drive very carefully so as not to break anything. Each car has about 14 failure-prone systems. The problem is, **some of the breakdowns seem completely random.** It's damned annoying to lose a time trial to a mysterious and unavoidable time blowout. So essentially you're playing an arcade racer with sim rules, it'd be nice if it went one way or the other, be it full sim or fully arcade like its distant cousin Top Gear Overdrive. If you can overlook the schizophrenic nature of the title, it has several good points. The cars are extremely maneuverable and are easily thrown around corners in full powerslide glory...that's fun. Also, the difficulty is balanced nicely. Since each race consists of three legs, you don't actually need to beat the other cars, just their times from checkpoint to checkpoint. Multiplayer, especially four-player, suffers from some slowdown but it's still playable. Overall, Softline (the game's new developer) did a pretty good job with Kemco's baby, still, it's nothing to get too excited about.

Dean

It's a weird one this too. It's like they wanted to do an arcade racer, but also wanted to make it a bit of a 'sim' hybrid. The result isn't particularly effective as the sim elements actually drag down what could be a reasonably playable arcade-style game. The graphics are a bit odd—all of the cars look a bit too 'toy like' for my liking and in places, the environments leave a little to be desired. The whole thing handles OK, but **it's certainly not the best racer on N64.**

John

The N64 needs some serious racing sims, and I mean right now! Each month, we get a handful of N64 racers that all look alike 2) all play alike 3) at all. Top Gear Overdrive was a decent racer last year, but I hardly recognize it for what it was. It's like Softline wanted TGR to be a sim, but didn't take the time to do the homework. So what we have is a game that controls like an arcade racer, with all the dressings of a sim. Not fun, not pretty, not for me.

Chris

Arcade-style gameplay in driving games is what I like. Top Gear Rally 2 plays very much like an arcade racing game. Everything about the control is arcade-style. But unlike a true arcade racer, damage is counted sim-style, and it's way too easy to damage your car. Running through loose trees are pretty fun, but the mix of sim and arcade styles just does not feel right in races against the CPU. **An average racer in a crowded genre.**

Chocobo's Dungeon 2

Developer: Square
Featured in: EGM #326

Best Feature: Item combination system
Worst Feature: Lack of story, mediocre graphics
Web Site: www.squaresoft.com

Like Evolution (on the Dreamcast), CD2 is a dungeon crawl in every sense of the word. Square's chubby little mascot teams up with a number of sidekicks to explore a series of randomized dungeons, while plot and character development falls to the wayside. Mind you, that's not necessarily a bad thing. **CD2 definitely cuts straight to the chase, it focuses on combat and gameplay,** the meat of any real RPG...and to that end, CD2 does rather well. Each square you move, each attack you make, gives your enemies a "phase" to react. All of this is seamless so that combat is quick, but you never feel like it's out of your tactical control. It takes a little getting used to because you'll want to run up to a group of monsters and attack them like an action game. Another important component of CD2 is the ability to combine things in "recycle boxes" and cauldrons to forge new and better items. You could say this feature is the game's Water/Ion/Junction system, as it provides you with a lot of flexibility. CD2 also allows for two-player simultaneous play, with your friend controlling the sidekick character. It's cool, but it could have been better implemented. If the cutesy Sanno aesthetics coupled with lots of combat isn't your thing, CD2 may be a rental. But do give it a try because after a while, I found it to be pretty addictive.

Chris

Two things about Chocobo's Dungeon 2. **First and foremost it's just too cutey for me,** and I've always enjoyed the story and the progression of characters in RPGs rather than the action and battle elements. Sure, CD2 has enough meat to it to satisfy most any gamer. But overall, even though CD2 has some nice ideas and a playful tone, it just doesn't do much for me. If you're looking for something different in the RPG area, perhaps you'll feel different.

Shawn

Square's mascot-with-feathers is back (yet the first game was never released in the U.S.). This is more structured than the first game, and while it's an action RPG, it's not going to appeal to the same audience as Zelda or Alundra, etc. It's cutey, but don't let that fool you—this isn't a kid's game. There's a lot of death here, and it'll take you forever to play all the way through. And since it's got random dungeons—you might play through twice.

Chris

Boring. I can't find a better word to describe this RPG. Sure, the item mixing is slightly interesting, but that's just a drop in an ocean of repetitive and flat gameplay. The random dungeon thing isn't the problem either—it's the lack of a strong story line or game structure. I felt like there was no real point in going through dungeon after dungeon, except to find stuff and level up my Chocobo. The weak two-player co-op mode doesn't add much either.

Fighting Force 2

Publisher: Eidos
Developer: Core
Featured In: EGM #123
Players: 1
Supports: Analog
Best Feature: Decent graphics and frame-rate
Worst Feature: No save points during long levels
Web Site: www.eidos.com

Let's not beat around the bush here, *Fighting Force 2*, like its older sibling *Fighting Force*, sucks. If the first FF was a mediocre venture into the Hit And Arcade territories, then FF2 is an attempt to cash in on Synchron Filter's gameplay and success. **FF2 fails on so many levels it's embarrassing**—far both Eidos/Core, and the franchise they're trying to establish. I know it's only a "blow stuff up" kinda game, but FF2 is so ridiculous it's constantly threatening to obliterate my suspension of disbelief. I mean, what's up with the main character being able to smash open a security safe with a karate kick? And what's the deal with the enemy AI that's nearly non-existent? Guards will literally stand in a cluster and wait for you to painstakingly scroll through your bag of goodies, whip out a grenade and frog their dumb asses. The gameplay in FF2 has taken a turn for the 3D platform-esque feel. But somewhere along the line, Core chickened out. As a result, what began as a shallow 3D beat-'em-up is bogged down with these pseudo-adventure contrivances. The first level itself takes nearly an hour to play through, and to make matters worse, you can't save during levels—and there are areas throughout each of the nine (fairly large) levels that instantly kill you. After playing FF2, you'll want to karate kick your PlayStation too. **ugh!**

Che

When I first dove into this game, I felt like Core had taken the original *Fighting Force* and added Tomb Raider-style story and depth to it. Turns out I just wasn't that lucky! Most of the massive levels seem to lead nowhere and get dull quickly. Sure, it's fun to destroy nearly everything you see, and some weapons are pretty cool. But the novelty wears thin when you blast your hundredth slow-crisp enemy or blow apart your 50th desk chair.

Crispin

I'm not sure who would enjoy this title! The combat is so unreflexive and contrived that even hardcore violence fans may think it's too stupid. **Kick an office chair and it explodes!** Destroy almost everything you come upon with your boot? It's like they added destruction just for destruction's sake. The enemies have no brains either. They basically stand around waiting to be shot or kicked with your all-powerful boot. I'll pass on this one.

Dean

Heating what sounded like cries of pain coming from Che's cubicle while he played FF2, I wondered what the big deal was. Frankly, I don't understand his utter disgust with the game. Granted, **FF2 is far from being the year's most innovative title**, but it's much better than the first *Fighting Force* (which isn't saying much quite honestly). Maybe I'm a little strange but I found the game to be fun at times. I still suggest renting rather than buying though. **Shawn**

March Madness 2000

Publisher: EA Sports
Developer: Black Ops
Featured In: EGM #225
Players: 2
Supports: Dual Shock, Multi-tap
Best Feature: Dicky V, baby!
Worst Feature: No analog control
Web Site: www.easports.com

Of all the sports games on the market, none gives off the same kind of energy as *March Madness 2000*. I attribute that partially to Dick Vitale, who chimes in with his usual array of classic comments. The energy is delightfully enhanced by the crowd, whose volume level rises and falls depending on your play. And it's pretty cool when you can use a timeout to quiet a hostile crowd. **Overall, this game epitomizes attention to detail.** When you take a shot it may hit the rim and bounce in, you may get one of those hard air-balls, or you may even bank it off the glass. But the rim physics regard the distance of the shot taken. Kick a long three and the rebound won't just fall off the rim, it'll really fly off with some energy. The Dynasty Mode steals the show. When I started playing with my beloved DePaul Blue Demons, I was overjoyed by the fact that they were ranked 25 in the nation. I knew they were ranked so high because of the ticker tape at the bottom of the screen that lists the top 25 teams. Now that's cool. There are some flaws. Special moves seem way too effective, and kick blocking may be a bit too easy. Also, switching to the closest defender is sometimes delayed. My biggest problem with *March Madness 2000* is that my Dick Vitale impersonation is awful. When it comes down, MMAK is better than NBA Live. **Todd**

The college atmosphere is re-created in excellent fashion here, with all the requisite features intact. **Gameplay is solid and a continuous to provide games with the ultimate tool—customization.** Don't like the frequency of blocked shots? Dial up the difficulty to your taste. Dynasty Mode is deep and realistic. One minor drawback is that the court seems a little small. Otherwise, "it's a PTA, baby!" **Dean I**

March Madness 2000 is much improved over last year's decent but slow-as-molasses effort. Now it's very fast, better-looking and very adjustable. They nailed the college atmosphere, especially with Dick Vitale doing the color. **One-player games are great but in Versus Mode the AI tends to break down a bit, leaving holes in the defense.** Also, why doesn't the game support analog? That's a big no-no. Problems aside, *MM 2000* is still really good. **Dean**

If you took my advice from my *Final Four 2000* review last month and wanted to see how *March Madness* turned out, well, there's the right choice. **March Madness 2000 is an overall much better game than Final Four**, with better atmosphere, more options and a fast, fluid game engine. As a sequel, it's a big improvement over *March Madness 99*, too, though I do have one gripe—why no analog control? On the whole, though, I really dig *MM 2000*. **John R**

Silhouette Mirage

Developer: Treasure
Featured In: EGM #222

Best Feature: Gameplay, added analog support
Worst Feature: Repetitive, obvious voices
Web Site: www.workingdesigns.com

Silhouette Mirage is the thinking man's shooter, to be sure. It's one of those old-school-looking side-scrollers that was way ahead of its time when it first came out on the Saturn. Even now, the game's dual-color shooting system stands up well in the game's department. Since you can only destroy enemies based on their color and yours, you'll find that the game constantly keeps you on your toes. A red shot will kill a blue enemy, while a blue shot will only drain it of its "spirit power." Your own color is determined by which direction you're facing...confused yet? Try keeping track of all this during heated moments of 2D mayhem. On top of that, *SM*'s game's unlikely hero(nal) has tons of moves she can pull out to help her exploit the game's main motif. There's no questioning *SM*'s originality and depth, but sometimes, it's difficult to keep from feeling overwhelmed. **Like all Working Designs localizations, SM is a labor of love—and this is especially noticeable if you've spent any time with the import.** It's significantly harder, and parts of the game have been needling (defeating) spirit bar, more expensive power-ups to provide longer play times. Despite all of its charm and originality, however, the game does reach a point of tedium. If you're a Treasure fan though, what the heck are you waiting for? **Che**

Calling *Silhouette Mirage* an old-school shooter would be doing it a disservice, because *you'll never played anything like this before.* The cover, downright weird gameplay takes get used to. Still, the first few levels really stop you into the game nicely, and you'll get the hang of your enormous arsenal of moves in no time. Despite its grating digitized voices, *SM* delivers all the killer Bosses and solid Gameplay I'd expect from a Treasure title. **Crispin**

I'm all for surreal games, so *Mirage* gets my vote in that department. But all of that weirdness aside, **the game is extremely original and provides tons of depth.** And when you couple that with the Treasure name you get something truly special and fun. Now, I have to take issue with the sound effects and voice. My God, that stuff truly tested the limits of my sanity. If you're into anime or the Japanese scene, though you may be able to stomach the noise. **Shawn**

Like Mischief Makers (964), *Silhouette Mirage* is a unique game with fresh ideas, all grounded in a traditional, safe-scrolling foundation. The whole red/blue duality gives this shooter a nice bit of strategy. **The presentation and design are great.** You know you're in for a Japanese-flavored treat when a boss gets killed by nearby apartment tenants because he's making too much noise. It's so sad, refreshing and interesting. Give it a shot. **Shoe**

Gran Turismo 2

Is GT2 the finest racing game on the PlayStation? For that matter...is it the finest racing game ever made? If the behavior of the Review Crew is anything to go by this month, you'd have to say it is.

I pondered what I was going to say in this review for a long time. Originally I was toying with the idea of just saying "wow" and leaving the rest of the page blank. I'd also toyed with posing the question "can we give a game an A?" You see, GT2 is that good. Every time you play it and try something new, it amazes you even more with its intricate attention to detail and the fact that it's so accessible. It's by far the "deepest" racing game you could ever imagine—and this depth is matched admirably by a superb feel, an amazing graphics engine and incredible sound. The license tests alone offer more gameplay than a lot of the crappy racing games we've seen this month. And they really teach you how to drive a car at high speeds with authority. Once you've played this, you'll really notice the limitations of other racers. The rally mode is probably better than any PS rally game around—the feeling of redneck speed that it conveys is truly unsurpassed. Throw in the uphill racing, the acres of car information, the special events, the grand prix mode—and then the fact that there's a 'pick up and play' arcade disc thrown into the package too, and you've got a bona-fide 'must buy' game. It's just...it's...wow, wow. Look, just go and buy it and see for yourself. Believe me, you won't be disappointed.

John

Gran Turismo 2 delivers everything I wanted from the sequel to the best racing game ever. This thing doesn't skip. You get a ridiculous amount of cars. The rally mode beats anything you'll find in games devoted to just that style of racing. Even if you're not crazy about the license tests, you can pep in the arcade disc and go nuts. Heck, you'll still get a lot out of the game if you only own the A and B licenses. Buy GT2 and you'll still be playing it in a year.

Crispin

It shouldn't come as a surprise to anyone that GT 2 is awesome. Even if it had problems (which it doesn't) it'd still be head and shoulders above the rest. Basically they kept the same game engine and added a ton more cars (close to 600 total) and modes. I'm especially psyched about the Rally and other off road events. It adds yet another dimension to a game already packed to the brim. No other racing game can touch it. I can't wait for the PS2 version.

Dean

Polyphony Digital never cease to amaze me. After churning out Gran Turismo (my favorite game of all time), they released Omega Boost, one of my favorites of 1999. GT2 is perfection all over again and I don't know how to thank them enough. Unfortunately, GT2 has a couple bugs that slipped out the door, but the realism and sheer joy of driving (and modding) your own car remains unsurpassed. I shudder at the thought of GT2000 in March.

It's 3:50 a.m. on a very cold December morning and five EGM editors are sitting in Dean's cube playing Gran Turismo 2. They've been playing it for days...but this particular session started around 9:30 p.m.—ish when Dean decided he was going to purchase a car like the one he drives in 'real life' (a Honda CRX) and see what he could do with it. As the CRX is taken through the first batch of races, the joypad is passed around the group as each event is raced and the money accumulates. Between races frantic debates are held as to which upgrade should be bought next...Suspension? Maybe we should try to reduce the weight? What kind of new wheels should we get? By 2 a.m. the tiny little 'gt sports hatch is a fearsome brute kicking some 205hp. Not only does it look different, and behave differently...even its engine sound has altered somewhat due to the mods we've

Graphically, GT2 isn't dramatically different from the original, but it's still one of the best-looking games on the system, applied. That's how damn fine this game is. Not only does it have 594 cars on offer. Not only does it have different racing mode offering out of every pore. Not only does it have enough depth to keep you playing forever... but it also has such attention to detail that everything you do in the game has a tangible and apparent effect on the overall experience. It's a game that will bring guys together. Just like we came together in Dean's cube. The only reason we stopped playing, just after 4 a.m. was because we all had to go home, get a few hours sleep and then come back to work to finish our deadline. If a tiny matter like getting the magazine finished hadn't have interrupted us...we'd have been playing for longer. This is a game that will be bought this Christmas and enjoyed all year. You'll be able to play this thing until GT2000 comes out...and you still probably won't have opened everything up, if you're a fan of cars and driving—this is just about the most perfect game you could imagine. Buy it.

True to EA form, Supercross 2000 is more of a sim than any moto game on the market. At first I absolutely hated the cornering. It seemed completely forced and wrong. I would enter a bend and turn the wheel but nothing would happen. Needless to say that isn't exactly how it's done in real life and nor is it in the game. The fact is, it takes a lot of patience and practice to master the corners. Careful use of the clutch, brake and where you position your rider's weight are key. **Even then it's not super exciting, in fact it's rather dull.** I reprimand EA for trying to make it real but there comes a point where it has to be fun as well. In addition, I can't figure out what they had in mind with the acceleration and power-band? If you've ever ridden or raced these bikes you know about the power-band. Essentially once the motor reaches a certain RPM it takes off like a rocket. There's nothing like that here. So the contrary, at times the bikes stay stationary when they should be spinning out. On a positive note, the graphics are decent, there's loads of real riders and bikes and the freestyle portion is something we haven't seen before. Just wish the developers could've thrown caution to the wind and made it more arcade-like. I'm going to stick with 99's SuperCross Circuit for my moto fun.

Dean

Why can't I get my stupid bike to go around the stupid corners properly? It's not exactly a foreign concept in a racing game is it? It's actually pretty f*cking fundamental! It's basically getting around the tracks, y'know, like 'piss-iker. Why this thing has such a stupid control system is beyond me. Maybe it was thought to be 'innovative' or 'real life' while in development. It's not though. It's frustrating and irritating and it spoils what could be an OK racer.

John

If you're looking for a Supercross game that's fast-paced and exciting, then look further. Supercross 2000 really doesn't cut it. The graphics are decent, and the freestyle mode is actually quite cool. But racing on these tracks is more frustrating than it is fun to play. The bikes are hard to control and get stuck in walls all the time. Combine that with all the harpin turns, and **you have a racing game that has too much stop and not enough go.**

Shoe

I may not be some sort of real-life BMX bender, but I've played plenty of motocross games that were more fun than Supercross 2000. This game has everything you could wish for in a dirt bike racer—everything that is, except controls. It's way too easy to get stuck in a corner because you're trying to turn, plus, you never really slide around corners, you just slow down and give up again. **The riders' models all look like deformed robots too.**

Tomb 2: The Evil Swine Return

Publisher: SCEA
Developer: Whoopee Camp
Featured In: EGM #226

Supports: Dual Shock
Best Feature: Tons of stuff to do
Worst Feature: Bosses are way too easy
Web Site: www.playstation.com

If you can get past the silliness of Tomb 1 (you know, the pink hills, strange mini-games and whacked-out characters), then you'll have yourself a great time. Because underneath its typical save-your-grilled-type story line and some ridiculously lame voice-overs, lies some serious—and though tedious in some respects and not particularly challenging—pseudo 3D gameplay. But what Tomb 2 lacks in difficulty in many of the tasks, it makes up in quantity. There are more than 150 tasks to complete (apparently some later tasks must be opened up through secret means), several mini-games to play and an array of items to acquire. You'll get wings, become mouse-sized, turn invisible, wash dirty laundry, eat some fruit and grapple from acorns, among a slew of other activities. Yeah, that's Tomb 2. Strange thing is, there's only four main areas to explore, each of which is broken up into a couple of smaller sections, but **the areas are absolutely jam-packed with stuff to do and collect**—and you'll have to work your way back to earlier areas to finish tasks. Unfortunately, the main bosses provided no challenge whatsoever. It was almost like they should've been more difficult, since they give you powerful magic. Oh well. Luckily, the main part of the game is extremely entertaining, and looks and sounds good to boot.

Shawn

Tomb 2 is the kind of game you'll keep wanting to play, because you want to see what neat game play ideas will pop up in the next stage. **This game is bright, colorful, solid, entertaining, unique and addicting.** The multi-branching paths may drive some of you a little nuts, especially if you're looking for a more traditional 2.5D game. If there's such a thing. Still, there's so much to see and do in Tomb 2, it's well worth the bucks.

Shoe

Luckily, very little of Tomb 2 involves Tomb 1 running around in full 3D. Nothing wrong with 3D games, but I'll take my platformers in pseudo-3D if possible, thank you. Even though developers Whoopee Camp have added lots more to the sub-genres this time around, some of them still suffer from the same sort of cedium from the first game. However, **the game is full of charm** and has more than enough challenges to keep both young and mature gamers busy.

Chc

Whoopee Camp has the strangest sense of humor of any game developer out there. But sure you know how to crank out a good platform game. I much prefer a smaller area with lots of things to do (and different things) than a huge overworld with lots of wandering around wondering where to go next. It feels like an **old-school 2D game trapped in a three-dimensional world.** A tad bit on the easy side, but is an enjoyable adventure for platform fans.

Tomb Raider: The Last Revelation

Publisher: Eidos
Developer: Core
Featured In: EGM #222
Players: 1
Supports: Dual Shock
Best Feature: More exploration; less combat
Worst Feature: Boring backtracking in many levels
Web Site: www.eidos.com

What can I say about The Last Revelation that I haven't said before, or a year before that, or a year before that, all the way back to my review of the first Tomb Raider? As we've come to expect, this latest sequel doesn't try hard to break new ground. The gal has learned some new moves—namely, the ability to shimmy around corners and swing on ropes. You even glimpse Teen Jiffball Lara in the training level. But control is as clunky as ever. Fortunately, TR4 doesn't force you to fight your opponent as much as the previous two sequels. As in the original, you face fewer enemies and not nearly as many swinging blades and other lethal obstacle courses that would otherwise put blisters on top of the calluses you got after playing TR3. This game's more about exploration and puzzle solving. Trouble is, you're forced into frequent backtracking during several levels, which act as hubs to nearby stages. Later puzzles are ruthless; you'll do a lot of creaking and reloading before you figure 'em out. **The game is riddled with glitches and feels rushed.** And don't even get me started on those friggin' scarab beetles. TR4 isn't without its great moments: the train level and a puzzle that works like a stone-age version of the bee-game (Serni) are just a couple. But—and this is just a fact of life—too much of the same 'ol thing gets too hot.

Crispin

Tomb Raider has never been a game that I've been able to get into. What hurts TR most is its **clunky, overly complex control scheme.** I had to stop and ask myself, "Why does this control this way? Why am I fighting the controls this much?" That kind of thing has plagued a lot of 3D games in the past, but while others have adopted tighter control and better cameras, TR hasn't. Get around the control and this is an OK game, but it needs a serious overhaul.

Chris

Well, it's better than the last one, but this is yet another example that just goes to show that we don't need to see these franchise games every year. It's more than apparent that the old idea well is running a bit dry at Core, and while the graphics are improved and the story more focused than last time—**you can't help but feel that this was rushed out.** Some of the puzzles don't seem thought through properly, and there are still control issues.

John

Brian Wilson once sang, "...It's so sad to see a sweet thing die..." and that's exactly what's happened to Lara Croft. True, TR4 is better than TR3, but the game still has major problems. Controls have not evolved; Lara's still a pain to move around, and this becomes especially obvious in certain areas of TR4, where **bad controls make you want to snap the disc in half.** If TR4 hadn't been rushed out the door, Eidos could have salvaged a game out of this mess.

If you take a step back and play Thrasher for what it is, you'll find that there's a decent and rewarding game underneath your desire to see another Tony Hawk Pro Skater. Thrasher features the "Combo" system that was so popular in THPS, with a touch more realism. As with most action games, there's a degree of intonation involved, but Thrasher requires you to think about the sequence of tricks before you ollie up onto a rail, or combo out of a molle yep. Unlike THPS, you don't need to hunt for hidden videotapes, break boxes or grab letters; however, you will be required to get a certain number of points before advancing to the later levels. And as an obligatory nod to skate culture, the fuzz will chase you around with a laser if you run out of time. Other nice features include real-life sponsorships (DC Shoes, Converse, etc.) and the ability to customize your clothes. But Thrasher isn't without its problems. The biggest hurdle for fans of THPS will be adjusting to Thrasher's cumbersome trick system. And graphically, the game just doesn't look as good as THPS. The character models are bulbous and cartoony, and of course, fictional clichés of the real thing. The two-player modes also lack any split-screen action so it's less of a party game for your friends. **Thrasher's not a bad game, but you may want to rent first if you already own THPS.** **Che**

Since I'm too clumsy to be good at skateboarding in real life, it's good that there are games like this and Tony Hawk. Thrasher's easy to get into and all of a sudden you lose track of time as you break laws and ride up the walls (and get zapped in the ass...OUCH!). I like that to progress in the game you have to get a certain amount of points in each level, bringing you to think about certain lineups of tricks. **A solid title, but second to the TH.** **Chris**

If it weren't for Tony Hawk, Thrasher would be one of the better skate games out there. And for a title that doesn't strive to do too much, it's actually not bad. Basically you're set loose on several levels to achieve as many trick points as possible before time runs out and the cops come. **The trick system, while extensive, isn't too friendly.** You have to memorize lots of combos to rake in the big points. I'll give it points for its old-school hip-hop soundtrack though. **Dean**

Tony Hawk's Pro Skater set a standard in what ultimately can only be a small niche genre of video games. Thrasher suffers somewhat from being late to the party, because it fails to match some of the qualities offered up by its well-respected competitor. I found the trick system to be way too cumbersome (my character spent a lot of time flat on his face), and while cute, I thought the clothes customization a bit too twee and "Barbie" for my liking. **John**

The idea of halting dinosaurs nipping and clawing at each other's throats is pretty exciting. It's great as a theme park ride. Even better as a movie. It's pretty good as a game, too. But as a fighting game? Well that depends on what angle you take. Prime Rage had those crazy pseudo-prehistoric beasts, and similar environments, so the fighting dino thing worked fairly well. The beasts in Warpath: JR, however, are simply dinosaurs, and the environments are jungle compounds and a gas station. It's just not very exciting really. The gameplay mechanics and overall feel of the game should've been reworked. Many of the dinosaurs' moves are very similar (like jump kicks, bites, tail whips, head lunges, etc.), and the overall fighting system simply lacks depth and detail. I like the eatbles (humans and animals running around each arena, just waiting to be munched on by a dino for some health), and the impressive saunts (which look like displays of dominance). But when it's all said and done, I just have trouble identifying with regular old dinosaurs as fighters. Why are they fighting? As ridiculous as it sounds, I'd have an easier time identifying with Jeff Goldblum or one of the other characters from the film if they were in a fighting game. The visuals and sound are well in place—the other areas of the game need work. **Shawn**

Fighting game Jurassic Park seems like it would make a good combo, right? As good as the license is, that doesn't mean it's going to be a good game. The fighting engine is weak, and battle amount to constant button mashing and jumping around. What is cool are its interactive environments (you can crash through objects, people/dinosaurs run through the ring). But there's not enough challenge or technique here to keep most players occupied. **Chris**

Well, it looks nice—and the sound effects are even better—but Warpath isn't a fighting game I'd want to play for more than 15 minutes. That's how long it takes until the novelty of clawing, screeching, battling dros wears thin. Dreamworks may claim this thing packs a deep fighting engine, but I just don't see it. Control seems sluggish. The tap-tap-tap gameplay is too shallow. I rarely used more than a few moves to zoom through the game. **Crispin**

According to Dreamworks, Warpath is pretty comparable to Tekken's 3 gameplay-wise. Hmm...and I'm really supposed to believe Warpath is Tekken's 3's equal? This game doesn't have what great fighting games have: interesting characters, a complex yet enjoyable fighting system and that certain natural feel. **The game engine just isn't precise enough.** There are clipping problems, and it's hard to tell where exactly the dinos are hitting. **Shoe**

My score may be a little misleading. *Cardfighters' Clash* really isn't that great of a game. It's not complex, the cards and powers aren't very creative and the RPG side is simplistic and too kid-friendly. I actually didn't like the game the first time I tried it. But I got past that first battle. Then I played some more. Then I fought some bosses. Then I lost a head-to-head match with *ChE* (I was severely handicapped). Then I won one. And I kept playing and playing and playing—on the plane, before going to bed, any time during the day, you get the idea. **This game is, in one word, addicting.** I can't get enough of it, and can't even come up with many solid reasons why. It does have that collectibility thing going for it—I'm having much more fun with this than I am with *Pokémon*. I also like the entire *Capcom* and *SNK* universes munged up thing. It's cool to have a CPU-controlled character asking to trade a "Terry [Bogard]" for a "Chus-Li." Even cooler, the game is full of insider goodies and jokes. You can visit the Resident Evil mansion, for example, and you can even do card battles against a character named "Mikami" (Shinji Mikami is the producer on the *RE* series, for *Capcom*.) The two different cards (with separate starter decks) and a great handicapping system make this a very two-player friendly game. Check it out!

Shoe

I'm not too wild on this game. **The card fighting gets a bit tedious after a while.** Why? Most of the cards "behave" the same, so there's really not a lot of variety here. Also, micro-managing your deck(s) can be a pain in the butt. After a while, I didn't even bother reorganizing my main deck unless I got a really sweet card worth putting in. Two-player is all right, but a battle can take a ridiculously long time. This isn't a bad game by any means—it's just not for me.

Shawn

It may rip-off ideas left and right from *Magic: The Gathering* and especially *Pokémon*, but *Cardfighters' Clash* still comes across as a novel experience. Although it's not as addicting or cutey (thank God) or easy to get into as *Pokémon*, this thing packs deep gamaplay that'll keep you glued to your handheld for weeks. The card game's rules are simple, the real strategy comes when you organize your deck and wield your special cards.

Crispin

I never paid much attention to *Cardfighters' Clash* because I'm not much of a card player/collector, you see. The whole thing just strikes too much of *Magic: The Gathering*, etc. *Shoe* got a head start on *CFC* while I was busy with *MOTM*, but for the past week of deadline or so, we've been playing this game non-stop. If you're into card battles, collectibles, *Pokémon*, really addictive two-player link games, do yourself a favor and pick up *CFC*. It's great.

With *Match Of The Millennium*, I thought I knew what to expect; after all, I had already played both *KOF R-1* and *R-2*, as well as *Fatal Fury* and *Samurai Shodown 2*. *MOTM* turned out to be far better than any of SNK's previous efforts on the NGPC. Don't let the size of the graphics fool you here, ***MOTM* is a real fighting game that offers plenty of depth for fans of the 2D genre.** Techniques like counter hits, tech rolls, 2-in-1 combos, juggles, and supers are all present and accounted for. The NGPC's "kick stick" has always been easy to use for fighting games, and it's no exception here. I still find it easier to whip out circular-type moves (fireballs) as opposed to charge-up moves (sonic booms)...it could be just me. Selection wise, the character roster from both SNK and *Capcom* are pretty evenly matched, except I wanted more characters from the Alpha series. The best part about *MOTM* is the built-in "tag" mode where you can tag between two fighters in real time...I never even dream this was possible on a handheld system. Other cool features include the ability to link up with *KOF Dream Match 99*, *MOTM* on the DC, and *Cardfighters' Clash* on the NGPC. There's even an "Olympics" mode where you play mini-games to unlock secrets and master abilities. This is by far the best fighting game on any handheld system.

ChE

Fighting games with only two buttons are usually a joke. *SNK Vs. Capcom* is different. Not only does it look great, but it plays just as well as its arcade cousins. It's also got mini-games which have less to do with the really between the two companies than having fun with each other's characters. There are Bernard-style music challenges and shooting gallery-type games. **Whether you're a *Capcom* fan or *SNK* fan you're going to like this game.**

Chris

I was actually pretty impressed with this. It does a more than passable attempt at scaling down the fighting engines of a host of classics, while offering some of the nicest and smoothest graphics for a game of this type on a handheld. **Experienced fighting game fans may find the early bouts a touch on the easy side,** but as you work through the story it gets quite challenging. I can't wait to see the Dreamcast version now.

John

Hey, I'm as ready as the next guy to summarily dismiss handheld fighting games. But to say *SNK vs. Capcom* really surprised and impressed me is an understatement. Not only does the game go beyond your expectations about what should be packed in the cart (extra inodes, a relatively deep fighting engine, tons of characters, tag-team play, minigames), it plays well too. Try this cart out. It's much better than you'd ever expect.

Best Feature: Sonic speed

Web Site: www.snkusa.com

Sonic's one of those games that lends itself so well to 2D, you wonder why Sega ever changed it. It's a big fan of the early *Sonic* games, and this is a welcome throwback to those games. I haven't seen a *Game Boy* game—definitely not a side-scroller—move this fast. Graphics and sound are crisp yet simplified versions of *Sonic 2's*. In true *Sonic* nature, the levels are huge and take multiple playings to fully explore, but that's always been the beauty of the series. Bonus stages look great and scale smoothly. Now for the bad news. When you're hit, your rings get away and if there are walls, they go through them without stopping. This leads to many a boss battle where you're scrambling to recover at least one ring, and you're left high 'n' dry. These are very minor control differences between this and *Sonic 3*, but it still captures the right flavor. A minor disappointment for me is that the *Casino* level has become a bodge-podge: "let's throw everything we can in here" level and is less enjoyable to play. There aren't as many huge, pinball-like pits that aren't blocked by something to speed up and down, and some of the enemies of the old *Sonic* games are sadly missing. In fact, the *Casino Zone* has no enemies except for the boss! Oh, a strong, yet somewhat lacking first showing for Sega and *Sonic* on the NGPC.

Chris

At the very least, *Sonic Pocket Adventure* proves that SNK's portable is more than capable of "blast processing." And the sharp visuals will make *Game Boy Color* owners a little jealous, too. This game instantly renews *Sonic's* 3D glory days. The classic look is used as game play will hook you immediately. SNK does suffer off beats of slowdown, but these are rare. If you got a Neo-Geo Pocket Color for Christmas, buy this game first.

Crispin

I'm just stoked to be able to play another handheld *Sonic*—especially one that so accurately conveys the familiar speedy, coin-scattering Hedgehog feel. Sure, some of the levels are missing a little bit here and there, and the enemies tend to be scarce throughout the game, but the feel is there and that's what counts. The Neo-Geo Pocket is shaping up to be quite a little system, and impressive titles like *Sonic Pocket Color* are just what it needs to take off.

Shawn

A shockingly good handheld version of *Sonic* that brings back fond memories of the old *Game Gear* games, only without the battery problems. The gamaplay mixing of *Sonic 2* and *Adventure* works especially well with only a few problems...the biggest of which is when *Sonic* dies and drops his rings—even if there are loads, you can only pick up one or two. It's a pain, but not enough to ruin. One of the best handheld games of '99.

FINAL WORD

Imagine a bunch of guys sitting around discussing something seemingly important in the world of video games. That's what Final Word is all about...this month it's

The Decline Of Arcades

Chris Johnston

Chris I remember back in the day where I could walk into an arcade and play games like *Altered Beast*, *Rampart*, *Q-Bert*, *Pac-Man*, etc. There was a lot of variety in the kinds of games being made. Now I walk into an arcade and get to decide between four different racing games, two different sports games (*Blitz* and *Showtime*), and whatever fighting game is the flavor of the month. That's about it. Or there's those deluxe machines where it's a dollar to play and you don't get more than a minute of game time. I'm not saying that

Crispin Boyer

...by churning out cookie-cutter games and making deluxe machines that are too expensive to play, they are killing off arcades."

John Davison

current arcade games aren't good...but it's the same old thing. The same thing is happening in Japan with music games, but at least they have something different, something new. The decline of arcades is really the industry's own fault—by churning out cookie-cutter games and making deluxe machines that are too expensive to play, they are killing off arcades.

Shawn Smith

Crispin I blame it all on *Street Fighter II*. Look at it this way—that thing came out in 1992 and people were lining up to play it. The arcades almost took on a Fight Club mentality, 'cause everyone was challenging each other. The \$5.00 coin-op cost the arcade guy \$1,600 or so to buy, and it's making \$900 a week because everyone's ga-ga over it. Then *Mortal Kombat* came out and split gamers into two camps: MK fanatics and *Street Fighter* purists. Arcade operators were buying nothing but clones of those games, because that's what they thought gamers wanted, but they were really just shrinking their audience. No average Joe gamer wanted to walk into an arcade and get trounced by a gang of experts on the newest *Street Fighter* clone.

Obo Zhou

John They're not so much 'games' now as they are novelty items. I think the home game market has had a big effect...people don't need to go to an arcade to see something really impressive any more. I can remember when arcade technology was always leagues away from what the home systems could do. *Virtual Racing* came out in the Genesis heyday—and even though the game was ported,

nothing except a real high-end PC could match the graphics. Now we have a console that's the same hardware as a top-of-the-line arcade unit. People need more than graphics now...they need ridiculous force-feedback things, stuff like that stupid Prop Cycle game, skateboards you can jump on, units that move and vibrate. I don't think arcades are necessarily just racing and shooting...it's almost like the 'savvy' arcade operators are trying to give complete fantasy 'thrill ride' situations...like that mine car thing.

Shawn Yeah, arcades and especially LBE facilities are completely about amusement these days. The idea of an arcade 'game' is all but gone—they're more like interactive arcade experiences, and you can't really play them from beginning to end on one token. Is this a bad thing? I don't think so. Home games are so different than their arcade counterparts as far as depth is concerned. It makes sense over-the-top arcade units like the ones around now are the standard. You want something memorable if you're going out on the town for a night of gaming. You want entertainment, not something you can experience at home.

Ché I think the home market has everything to do with the decline of the arcade scene. Remember when home ports always meant some sort of sacrifice? *Bionic Commando*, *Ikaru Warriors 2* and *Renegade* for the NES all turned out to play nothing like their arcade counterparts. Nowadays with games like *Soul Calibur*, people expect nothing less than perfection...and as a result, the future of gaming has been handed down to the consumer market. For me, this is a real shame. I miss the days when you looked to arcades for early forecasts of things to come. I miss marveling at the latest arcade boards. I miss arcade cabinets that only had a joystick and three buttons. I miss the community you felt with other fighting game freaks when you waited in line to beat somebody's ass in *King of Fighters '95*. Screw the Bemani generation, I want my 2D vertical shooter clones!
